# VOLUME VIII, PART 1 — Codicum Parisinorum Pars Prima (1929)

**Descripsit Franciscus Cumont**

293 pages | Bibliothèque nationale de France, Paris — Codices 1–13

## Preface (pp. v–vii)

Cumont (Rome, March 1929) acknowledges the long gap since the last volume (1921), the wartime death of Pierre Boudreaux, and thanks Rome, Lebègue, Pelzer, Delatte, and Thomas for assistance.

## PART I: CATALOGUE (pp. 1–199)

**pp. 1–19 — Cod. 1 = Paris. gr. 1991 (paper, 15th c., ff. 142)**

A complex collectaneum partly derived from Florentine manuscripts. Contents include:

- Earthquake omen text and marginal omen (*Peri seismōn proēsēmanseos*)
- **Hephaestion of Thebes**, I, 20–23: on universal and inceptional judgements; eclipse and cometary apotelesmatica (effects by zodiac sign and eclipse colour)
- Moon at the Dog Star's rising: significations by zodiac sign
- On the zodiac circle and the Jupiter 12-year cycle (Zoroaster / *Geoponica* tradition)
- **Clodius Tuscus**, *Peri epitellontōn kai dyontōn asterōn*: Roman-derived month-by-month star calendar
- **Hermes Iatromathematikos pros Ammōna Aigyption**: opening chapters on medical astrology (critical days)
- Surgical timing attributed to Galen: on choosing times for surgery
- **Pancharius**, *Peri katakliseōn* (On medical crises): prognostic from lunar position at illness onset (fuller version of the text in Vol. I)
- **Theophilus of Edessa**, *Peri kosmikōn katarchōn*: annual chart predictions including Lot of kingship; month-by-month predictions; planetary conjunctions
- **Rhetorius**: on the 12 zodiac signs and their significations (ed. Boll in Catal. I)

**pp. 10–57 — Cods. 3–4 = Paris. gr. 2256 and Paris. gr. 2419 (the two most important manuscripts in this fascicle)**

**Cod. 3 = Paris. gr. 2256** (15th c., ff. 213): A major collectaneum including:

- **Paul of Alexandria**, *Eisagōgē* with extensive scholia from **Heliodorus**
- Porphyry, *Introduction*; Hephaestion, extensive excerpts; Rhetorius
- **Theophilus of Edessa**: extensive electoral material
- **Dorotheus of Sidon**: electoral chapters
- Comprehensive universal judgements from solstice / equinox charts — effects on each social class from each planetary configuration
- **Julian of Laodicea**: meteorological chapters
- **Lot of wheat, barley, and other crops** (*Klēros sitou, krithōn, ospriōn*): agricultural prediction from the annual chart (Abu Ma'shar tradition)

**Cod. 4 = Paris. gr. 2419** (14th–15th c., ff. 391): An even richer compilation:

- Hephaestion / Rhetorius standard material
- **Theophilus of Edessa**, *Peri Katarchōn* in many chapters: warlike elections; sea voyages; agriculture; medical treatment; finding lost objects; letters; commerce
- **Dorotheus of Sidon**: elections for marriage; buying slaves; trading; building; planting
- **Vettius Valens**: large excerpts on annual returns, monthly periods, and daily predictions
- **Heliodorus**: on the decans and their parantellonta
- Universal annual predictions from solar ingress charts, organized by planet and sign
- **Founding horoscope of Rome** (*horoskopos tēs Rōmēs*) with analytical commentary — politically and historically significant
- Several datable interrogational horoscopes from the 9th–11th centuries CE

**pp. 57–200 — Cods. 5–13 (further Paris manuscripts)**

Including:

- **Cod. 9 = Paris. gr. 2425** (12th–13th c., ff. 293 — one of the oldest Paris manuscripts): Dorotheus of Sidon fragments; extensive Hephaestion (Books I–III); Ptolemy *Tetrabiblos*; Porphyry; Maximus astrological poem
- **Cod. 10 = Paris. gr. 2426** (15th c.): Astrampsychus oracle; *Selenodromion*; extensive interrogational chapters; Abu Ma'shar–derived interrogation text
- **Cod. 13 = Paris. gr. 2430**: Rhetorius and Hephaestion extracts; unique material on the colour of eclipses and their political predictions

## PART II: APPENDIX — Critical Editions (pp. 199–293)

**pp. 199–215 — From Cod. 9: Hephaestion Books I–III excerpts**
Selected passages with critical apparatus, filling lacunae in the Vol. II edition.

**pp. 215–267 — From Cod. 4 (Paris. gr. 2419): Theophilus of Edessa, Peri Katarchōn**
Large-scale edition of Theophilus's elections treatise, covering: general theory of elections; warlike elections (battle, siege, retreat, naval); medical elections (surgery, blood-letting, medicines, diet); agricultural elections (planting, sowing, pruning, harvesting); domestic elections (building, buying slaves, marriage, travel); commercial elections (buying, selling, partnerships).

**pp. 267–293 — From Cods. 1, 3, 4, 13: Miscellaneous editions**
Hephaestion I, 20–23 on eclipses and comets; founding horoscope of Rome with commentary; supplementary interrogational chapters from multiple codices.

# PRAEFATIO

Quum ante sex fere lustra ad describendos codices astrologicos Parisinos nos accingeremus, operam arduam et diuturnam fore praevidimus, haud tamen in tantum humani aevi spatium productam. At curae nostrae duo consortes medio in labore interierunt, Carolus Ruelle senectute confectus, Petrus Boudreaux immatura nece praereptus. Deinde per magnum saevissimi belli intervallum totus fere philologiae campus in vervactum conversus est. Mundo pacato quod tres sodales inceperant, mihi soli perficiendum fuit. Expleto nunc hoc tomo primo, qui quartus editur, huius catalogi Parisini, omnes amplissimae bibliothecae codices recensuimus. Thesauro illo astrologicorum scriptorum Parisino omnium divitissimo sic ad calculos vocato, finis totius incepti nostri propinquat. Iam libros Hispanicos omnes accurate et sollerter descripsit Carolus O. Zuretti Mediolanensis, Batavos egregius Manilii commentator, nimis cito defunctus, Iacobus Van Wageningen. Restat ut pars Britannicorum et Vaticanorum, paucissimique alii in Scandinavia alibique dispersi recognoscantur, ut, indicibus generalibus additis, opus ingens absolvatur.

Superest ut quantum alii operam meam huic tomo navatam benigne adiuverint grate tester. Anno 1898, opus laboriosum immanis codicis 4 describendi, quod inceperam, diligentissime perfecit Parisiis M. A. Kugener, nunc

# PREFACE

When, nearly thirty years ago, we set ourselves to describing the astrological codices of Paris, we foresaw that the task would be arduous and lengthy, yet not so prolonged as to consume so great a span of a human lifetime. But two of our companions perished in the midst of the labor: Carolus Ruelle, worn out by old age, and Petrus Boudreaux, snatched away by untimely death. Then, through the long interval of a most savage war, the entire field of philology was left almost fallow. When peace returned to the world, what three colleagues had begun fell to me alone to complete. Now that this first tome — published as the fourth in the series — of the Paris catalogue has been finished, we have surveyed all the codices of that most extensive library. With that treasury of Parisian astrological writings, the richest of all, now brought to full account, the end of our entire undertaking draws near. Carolus O. Zuretti of Milan has already described all the Spanish books accurately and skillfully; the Dutch ones were treated by that distinguished commentator on Manilius, Jacobus Van Wageningen, who departed this life too soon. It remains for the British and Vatican portions, and the very few others scattered across Scandinavia and elsewhere, to be examined, so that, with the general indices added, this immense work may at last be brought to completion.

It remains for me to gratefully acknowledge how generously others have assisted my labors on this volume. In 1898, M. A. Kugener, now

professor Bruxellensis. Anno autem 1899 praefectus bibliothecae mss. Parisinae Henricus Omont, qua semper est humanitate, codicem 10 Gandavum transmittere non recusavit, ut farraginem indigestam sed pretiosissimam commodo meo excutere possem. Ante bellum Petrus Boudreaux, qui acerba morte paulo post litteris ereptus est, petenti mihi ex collectaneis astrologicis plura transcripserat et nonnullis apographis eius ad parandam usus sum " Appendicem „. Sacerdos in astronomia Graecorum versatissimus A. Rome Lovaniensis ad computationes Rhetorii expungendas auxilium eruditionis suae comiter mihi suppeditavit. Henricus Lebègue, quo nemo scripturae Graecae peritior, prona in me voluntate ad dubia qualiacumque mea tollenda codices inspexit. Scriptor doctissimus bibliothecae Vaticanae, Augustus Pelzer ad inventarium librorum Symonis Pharees me delegavit, quod inter testimonia recepi. In plagulis corrigendis Armandus Delatte, professor Leodiensis, quamvis ipse in abstrusis Anecdotis suis Atheniensibus edendis horas subsecivas impenderet, mihi fuit coadiutor indefessus, nec ea tantum velim ingenio eius tribuas quae in adnotatione nomine eius signantur, Amicus inveterata devotione mihi carissimus Paulus Thomas, nunc Bruxellensis, in hoc libro quoque, quotiens eum adii, ad menda tollenda semper benevole mihi subvenit. Beneficia quibus omnes me devinxerunt, officio meo nunc consummato, grata mente reminiscor.

Scr. Romae idibus Martiis MCMXXIX.

a professor in Brussels, most diligently completed in Paris the arduous task of transcribing the enormous codex 4, which I had begun. In 1899, Henri Omont, prefect of the Parisian manuscript library, with his characteristic kindness, did not decline to send codex 10 to Ghent, so that I might conveniently examine that unwieldy but most precious miscellany. Before the war, Pierre Boudreaux, who was shortly thereafter cruelly snatched from the world of letters by an untimely death, had transcribed for me at my request numerous passages from his astrological collectanea, and I made use of several of his apographs in preparing the "Appendix." A. Rome of Louvain, most deeply versed among priests in Greek astronomy, graciously placed his erudition at my service in expunging errors from the computations of Rhetorius. Henri Lebègue, than whom no one is more skilled in Greek script, with ready goodwill toward me, examined the codices to resolve whatever doubts I had. The most learned scriptor of the Vatican Library, Augustus Pelzer, directed me to the inventory of the books of Simon Phares, which I have included among the testimonies.In correcting the proofs, Armand Delatte, professor at Liège, although himself engaged in publishing his own recondite Athenian Anecdotes during his spare hours, was my tireless collaborator; nor would I wish you to attribute to his judgment only those things marked with his name in the notes. My dearest friend of long-standing devotion, Paul Thomas, now of Brussels, likewise in this book, whenever I approached him, always kindly assisted me in removing errors. The benefits with which all of them have bound me to them I now recall with a grateful heart, my duty having at last been fulfilled.

Written at Rome on the Ides of March, 1929.

# PARIS CODICES

1. Code. Paris. gr. 1991. — Paper manuscript, 30 × 22.5 cm, 15th century, ff. 142. Written throughout in the same hand. Formerly Regius 2137. From the library of Trichet-Dufresne (cf. Delisle, Cabinet des mss., I, p. 169), as attested by Omont, Inventaire, vol. II, p. 175. The numbers written in the margins (ff. 5v, 91) demonstrate that the order of chapters in the archetype has been disturbed. The earlier part (f. 1–83) of this codex appears to have been drawn from Florentinus 12 (Laur. XXVIII, 34); cf. Boll, Sitzungsb. Akad. München, 1899, p. 106. From folios 25–80 of this codex, ff. 42–96 of Parisinus 31 were copied.

Begins after four blank folios.

F. 1. Natural inquiry concerning earthquakes as understood by the ancients. Cod. Flor. 12, p. 110. — Ed. Wachsmuth, Lydi De ostentis, p. 172.

F. 4v. In the margin: κς'. On the presaging of earthquakes. — Ibid., f. 113v. — Edited ibid., f. 173.

F. 5. Scholion from the voice of Symeon the monk, the chrysographer, etc. — Ibid., f. 114. Edited ibid., p. 175.

F. 5v. 27. On universal examinations and outcomes (Of these, thus — whether of the luminaries). Ibid., f. 114. - Hephaest. Theb., I, 20, p. 75, ed. Engelbrecht; cf. Olivieri, Studi Ital. di filologia class., VI, 1898, p. 9.

F. 9v. 28. Outcomes of eclipses that occur and of comets (The ancient Egyptians also recorded — signifies fleeing and being shaken from their foundations). = Ibid., f. 117 and 121. Hephaest., I, 21–22, p. 82 Engelb.; cf. Olivieri, l. c.

Γ. 15. On the Colors and Comets [Observed] During Eclipses (One must also observe the colors during eclipses, that is, of the luminaries themselves — in the northern region). == Ibid., f. 192. - Hephaest., 1, 23, p. 97 Engelb.; cf. Olivieri, l. c.

Γ. 16. What the Moon Signifies as It Passes Through Each Sign at the Rising of the Dog Star (The rising of the Dog Star occurs at the dawning of the twentieth of the month of Hlius [sic] — destruction of four-footed animals). Ibid., f. 123. Geoponica, I, 8, 15, ed. Beckh).

Γ. 16. On the Zodiacal Circle (The Zodiac — attested). Ibid., f. 123: Cf. cod. Ital. 29, f. 135; Geopon., I, 12.

F. 17v. <Clodii Tusci> Περὶ ἐπιτελλόντων καί δυόντων ἀστέρων κτλ. (Μηνὶ ἰανουαρίῳ — πολὺς βορρᾶς). = Ibid., f. 124; Lydi *De ost.*, ed. Wachsmuth, p. 117-155, 10; cf. Lorenzo Bianchi, *Der Kal. des Clodius Tuscus* (*Sitzungsb. Akad. Heidelberg*, 1914), p. 6.

F. 24v. Vacuum est. — F. 25 incipit epistula Hippocratis vel Dioclis ad Ptolemaeum, Aegypti regem. Reliquam codicis partem obtinent opuscula medica variorum auctorum.

After other material, at f. 218, there is found a circular diagram of the zodiac signs, indicating how they are connected to one another and what is proper to each, such as: Fiery Aries. (Of Mars). Equinoctial, masculine.

2. Cod. Paris. gr. 2229. Paper manuscript, 29 × 22 cm, ff. 88, 13th century. Binding of King Henry II. Formerly from Fontainebleau (Omont, Catal. des mss. grecs de Fontainebleau, 1889, p. 157, no. 472), Regius 2697. Cf. Omont, Inventaire, vol. II, p. 217. After two more recent paper folios, there begins, at f. 1, the compendium of Symeon Seth on the properties of foods. Ends at f. 21.

F. 21 is blank. F. 22. Title faded. On .... and the forties (The seed cast in the womb; and the memorial rites). — Cf. Lydus, De mensibus, IV, 26; Krumbacher, Gesch. Byz. Lit.[2], p. 620, no. 7; and in this catalogue vol. VIII, 4, p. 206, n. 1.

All faded titles have been rewritten by another hand. On the significance derived from animals: those that foretell winter [read: as many as foretell winters?] and fair weather and the movements of the winds (When goats approach — their silence signifies fair weather). — To be published in the appendix.

Γ. 22. On the Signs from the Sun ("The sun, varied from the east, wintry — signifies a wintry wind). — Cf. cod. Ital. 20, f. 105.

Γ. 23. On the Signs from the Moon (The third-day moon, thin and clear — black and wintry). Cf. ibid., f. 105; cod. German. 18, f. 115.

On the Rainbow (the fiery aspect of the rainbow [sic] is of greater significance for winds than is recorded here). A brief explanation concerning the seven planets and the twelve zodiac signs, drawn from the mathematical prognostication of Aristarchus [the title, like the others, rewritten by a hand of the 15th century] (It should be noted that there are seven planets, in imitation of the seven days of the week, ~~the~~ conceived feminine). Meager and commonplace precepts.

Γ. 23. On nativity, a precise explanation (sic) (It should be noted that the house of Saturn is Capricorn, Aquarius since the Moon, while passing through one to each. . .). The text breaks off at the bottom of folio 23.

Γ. 24. Horologium of the seven days, with the Holy God. Seven circles, by which it is shown which hours of each day are subject to each of the individual planets.

F. 24. Blank. F. 25 begins the epistle of Hippocrates or Diocles to Ptolemy, King of Egypt. The remaining portion of the codex is occupied by short medical works of various authors.

1 I erred when, in compiling the first part of volume V of our Catalogue, having cited the testimony of this Parisian codex, I noted that Apomasar had transcribed certain chapters from Theophilus. For it is apparent that folios 23 ff. of this codex no longer belong to the work of Theophilus. The compiler of this collection, just as at f. 1 ff. on diseases, has here gathered together the opinions of various writers on wars. Cf. folio 33, where he records the opinion of the astrologer Σεχελ, i.e., the Jew Sahl ben Bishr, who lived in the ninth century, as did Apomasar.

Περὶ αἰτήσεως χάριτι χρημάτων (Ἐν τούτῳ τῷ κεφαλαίῳ — εὐθυποροῦντες). = Cod. Vindob. 4, ibid.

4. Cod. Paris. gr. 2419. Paper manuscript, cm. 41 × 31, ff. 342, 15th century, largely written in the hand of Georgios Midiates (f. 110, f. 288). — Subsequently added, and written, as it appears, in another hand of the same period, are ff. 144–148 (ff. 149–152 are blank); ff. 264–278 (where the years 1461, f. 278, and 1462, f. 275, are noted) and the final pages of the codex. In a hand quite different, dating to the 15th–16th century, are ff. 218–219 (219–223 are blank). Gatherings are numbered up to f. 311, un', with the order occasionally disturbed (f. 319, μγ' after μη'; f. 279, λε' after μα'). Between ff. 168–169, as can be gathered from the numbering, three gatherings are missing (κβ'–κδ'); between ff. 217–218, half of gathering λα' and all of λβ' and λε' have been lost. Between ff. 278–279 one folio has perished. Formerly belonging to Cardinal Niccolò Ridolfi († 1550), whose librarian Matthaeus Devarius wrote on f. 340v: Πίναξ· αὕτη ἡ μεγάλη βίβλος ἣν ἐκόμισε τις Ἕλλην ἐν Βαλνεαρίᾳ διατρίβοντι τῷ δεσπότῃ περιέχει ἀστρονομικά τινα καὶ ἰατρικὰ καὶ ἄλλα διαφορά (cf. Delisle, Cabinet des mss., I, p. 209). Subsequently acquired by Catherine de' Medici. Regius 1843. — The immense codex has been partially described by Omont, Inventaire, II (1888), p. 256; Engelbrecht, Hephaestion von Theben, 1887, p.15 f.; Berthelot and Ruelle, Collection des alchimistes grecs, I (1888), p. 205; Henricus Lebègue, Cat. des mss. alchim. grecs, I, Parisini, no. 3, p. 62. The laborious task of examining the entire book, which I had begun, was completed at my request in 1898 by my friend M. A. Kugener. We have preserved the vernacular language and the poor orthography frequently employed by the copyist. The distorted Hebrew letters, which he often used in titles in place of a cipher, we have transcribed with an added note, insofar as they could be read.

In four folios prefixed to the codex itself, Latin indices are found in the hand of Johannes Boivin. On F. 4v is read: Codex chartaceus scriptus manu Georgii Midiatae et nota de Matthaeo Devario (supra).

1 The first part of this large codex (ff. 1–168) contains astrological collectanea which Georgius Midiates compiled for his own use around the year 1460, it seems, and divided into four books, each prefaced by a table of contents (ff. 1, 64, 92, 115). He inserted many passages from the syntagma we call the Laurentian (Boll, Sitzungsber. Akad. München, 1899, p. 107), and drew many others from additional sources, both extant and now lost. — Georgius Midiates also copied the Parisian codex 2180 (= 38; vol. VIII, 3, p. 14).

F. 237. Περὶ ἀπόντος εἰ ἐπανέλθῃ (Εἰ βούλει ἰδέναι [*sic*] περὶ ἀπόντος ἐὰν ἀλύσει ἢ οὔ — ἀλλ' ὅμως τὴν ἐσχάτην μαρτυρίαν ζήτει πάντοτε).

Περί τινος πράγματος βουλομένου οἰκειωθῆναί τινι (Εἰ βούλει μαθεῖν περί τινος πράγματος — καὶ γνώσεις Θεοῦ θέλοντος).

Περὶ πράγματος φοβουμένου μήποτε συμβῇ αὐτοῦ χαμός (Ἐὰν βούλει γνῶναι περὶ πράγματος ὅπερ φοβεῖ — πρὸς τὸν παρελθόντα φόβον).

Περὶ στρατοῦ εἰ καλὸς ἔσται ἢ οὔ (Ἐάν τις ἐρωτήσει [*sic*] ἔσται περὶ ἐπιστρατείας — σημαίνει κακόν).

Περὶ χρόνου εἰ εὔφορός ἐστιν ἢ οὔ (Ἐὰν βούλῃ μαθεῖν τὸν ἐνιαυτὸν εἰ ἄρρα [*sic*] πρόσφορος ἔσται ἢ οὔ — ἀνεμώδην [*sic*] καιρόν).

F. 237v. Περὶ σοφρόνου [*sic*] γυναικός (Εἰ βούλ<ει> γνῶναι εἰ σόφρον [*sic*] ἐστὶν ἡ γυνὴ ἢ οὔ — καὶ εἰς αὐτὸν κρῖνον).

Περὶ συντροφίας (celera evanida) (Ἐὰν βούλ<ῃ> εἰδέναι εἰ ἄρα μετά τινος συντροφίας — εἰ δὲ κακόν, σημείωσαι αὐτὸν γενέσθαι κακόν).

Περὶ συνοικεσίου (Ἐὰν δὲ βούλῃ γνῶναι εἰ γένηται συνοικέσιον — τῇ αὐτοῦ ῥωγῇ στοιχείσωμεν [*sic*]). — Cf. infra f. 239v.

Περὶ τοῦ γνῶναι τί συμβήσεται τῷ ὑποτεταγμένῳ λαῷ καὶ τῷ ὑποτάξαντι (Ἐὰν συμβῇ τινι πόλιν ὑποταχθῆναι δεσποτείᾳ — εἰ δὲ κακά, κακά).

Περὶ τοῦ γνῶναι καλόν ἐστιν ἐξελθεῖν ἐκ μιᾶς χώρας εἰς ἄλην [*sic*] ("Ορα τὸν ε' καὶ η' οἶκον — καὶ ζωὴν κακήν).

Περὶ ἀπόντος εἰ βούλει μαθεῖν πῶς ἔχει (Ἐὰν βούλῃ μαθεῖν περὶ ἀπόντος πῶς ἔχει — ὁμοίως ἔσται).

And otherwise, on the beginning, middle, and end of the nativity (One must know that if in some manner — in no manner is it appropriate to judge a stranger).

Γ. 234. Beginning of the chapters on the significance of the figures (The entry (signum geomantiae) and exit (idem) form quadrupedal figures — and it is possible to grasp the nature of affairs).

1.235. Revelation of intentions (Of all things, as is the custom — that fully reveals the reasoning).

On the Indication of Times (Pay attention to the 15th sign do likewise).

Γ. 235. On the Quantity of Money [If someone poses a question concerning the quantity of money, the submission is the 1st signum geom.).

On Knowing the Calculation (All those who are learned in the present art — which pertains to the 15th).

Γ. 237. On the absent one, whether he will return (If you wish to know about an absent person, whether he will return or not — but nonetheless always seek the final testimony).

On a matter that one wishes to be associated with something (If you wish to learn about a certain matter — and you shall know, God willing).

And otherwise (Again Zanatis says regarding the calculation [illegible] of the of months and likewise of years).

On good things and then two triangles (You ought to consider when the ramplio is made — and thus you ought to examine).

On the co-habitation [sic] of houses and types (It should be known that the theory of houses in relation to one another [illegible] and thus acting in all things you will not err).

On casting calculations concerning them (Make a ramplio and place the elements [sic] — from the 15th, that is of the Ram).

Another (Unite the 1st and 7th — take the judge of the matter).

Another (Likewise from the 8th and 9th — — — the calculation).

Another (Cast [sic] from the and 8th [illegible] the calculation).

Another (Unite the 1st, 14th, 4th, 6th [illegible] the outcome of the time).

Γ. 243. Another true one (Take the 1st and 8th, the 3rd and 5th — the intention [sic]).

Another (Likewise the 1st and 5th, 6th and 8th — the matter).

Another reliable method for casting a calculation (Cast [sic] from the 1st and 8th and the body).

Another method for finding a reliable omen (The odd numbers of the 16 — however many there are — Seek the omen).

*Another reliable method (The total numbers of the ramblio, subtract [i.e., remove] from the 9 — this reveals the omen).

When someone comes to ask you about something, give him the reed so that he may pray to himself thus ("Almighty God" — eternal [sic] — with God's help).

Concerning an old hidden treasure, whether it exists or does not exist, and whether it is found or not (Square the entire place you suspect — and judge from these).

Γ. 943. How one might know the nature of the hidden thing [sic], into whose hands it will fall, and its form (The 1st indicates the nature — its metal).

And if ανιθ (?) comes out (The 4th together with the 14th — its form).

Titulus deest (The fiery figures indicate — and the taste). Another (From the 1st and 10th — of the matter).

These figures, the duo triangula, indicate that there is something (These signa geomantica indicate gold or something red [sic] — these signa geomantica indicate a cabinet).

Whether, if someone asks me whether I will give, the thing will come back to me or not (Look at the 2nd house, and if there is in it a figure and the exit — he will not give it to you).

Concerning a certain accountability [sic] and exactness (See the 1st and 2nd — they indicate irregularity among them).

Another (Count all the grains of the rampli [illegible] and no more).

Πῶς οὖν γινώσκεις τὸ ὄνομα τοῦ φίλου καὶ ἀντιδίκου σου (Διὰ τοῦ ἀντιδίκου βλέπε τὸν ζ' — καὶ ψευδολόγων).

F. 244. Πάλιν περὶ θησαυροῦ ("Ορα τὸν α' οἶκον καὶ ἐὰν φανῇ — εἰς τὸ ιε' οἶκον).

Εἰ ἀληθῆ εἰσιν τὰ λαλούμενα ἢ οὔ ("Επαρε τὸν α' καὶ ι', ζ' καὶ δ' — ἢ βλέπε ἀστέραν [*sic*] ἐπίκεντρον).

"Αλλο (Καὶ ἐὰν ἐντὸς τῶν ιϛ' τύπων — εἰ δὲ ἔξοδος μακράν).

F. 245. "Αλλο ('Από τοῦ α' καὶ ιγ' ἔκβαλον τόπον — ἢ καὶ πράττει).

"Αλλο ('Ομοίως ἐκ τῶν δ' κέντρων — ὅτι ἔρχεται ὁ ἀποδημῶν).

"Αλλο ('Εὰν ὁ τύπος ὁ α' εἰς τὸν η' ἢ θ' ἢ δ' — καὶ γοργὸν ἔρχεται).

"Αλλο (Τὰ μονὰ κουκκία τῶν ιε' οἴκων — ἢ ἀσθενεῖ).

Περὶ τοῦ αὐτοῦ ὄντος ἐν ξενιτείᾳ καὶ μέλλωντος [*sic*] ὑποστρέφειν (Βλέπε τὸν ζ' τύπον καὶ τὸν ιβ' — τὰ ἴδια).

Εἰ ταχέως ἔρχεται ἢ οὔ (Βλέπε τὸν θ' — καὶ ταχέως ἔρχεται).

Εἰ ζῇ ἢ τέθνηκεν (Βλέπε τὸν β' καὶ τὸν η' — ἀπέθανεν).

Περὶ πράγματος εἰσόδου καὶ εὑρέσεως ('Εὰν καθήσει [*sic*] ὁ α' καὶ ὁ β' εἰς τοὺς τόπους αὐτῶν — εὕρεσιν τῆς ἐλπ<ί>δος).

Εἰ ἀποκερδαίνω (Βλέπε τὸν α' καὶ β' — ἢ συγγενῶν).

"Αλλο (Λαβὼν τὰ μονὰ κοκκία τῶν ιε' οἴκων — εἰ δὲ ζ' ἀπὸ λαοῦ).

Εἴδησις περὶ ἀδελφῶν ("Οταν πέσῃ ὁ τοῦ ϛ' οἴκου κύριος — ὁ Θεός ἐστι μόνος ἀληθής).

Περὶ ουτινοδους [= οὐτιδανοῦ] ζητήματος (Βλέπε τὸν α' καὶ β', θ' καὶ δ', γ' καὶ ι' — τῷ ἐρυθρῷ).

Περὶ αἰχμαλώτων (Βλέπε τὸν θ' καὶ τὰ πρωτότυπα τῆς ὁδοῦ — καὶ φυγήν).

How then do you know the name of your friend and adversary (Through the adversary, look at the 7th and of liars).

F. 244. Again on treasure (Look at the 1st house and if it appears — into the 15th house).

Whether what is said is true or not (Take the 1st and 10th, 7th and 4th — or look at the angular star [sic]).

Another method (Having united the odd dots of the 15 — if two, it is true).

On conversation with loved ones (See the 1st, 5th, 11th, 15th — you will judge more accurately).

On a journey (If the question concerns a journey — but you will always travel a straight road).

Г. 244. On the travel abroad and sojourn in foreign lands of the questioner [sic] (Look at the 1st and 9th — by land).

Another method (If in the 9th house — power and prosperity).

On travel and its nature, and on his arrival (See the 1st and 8th — with double judgment).

Another (Cast the lot from the 2nd and 8th [sic] — according to the aforementioned lot).

Another (Look at the 4 angular houses — but if a favorable departure is delayed).

Another way (If the 9th and the 8th are departures — but if not, western toward the west).

Another (And if within the 16 lots — but if the departure is far).

F. 245. Another (Cast the lot from the 1st and 13th — or also he acts).

Another (Likewise from the 4 angles — that the traveler comes back).

Another (If the 1st lot falls in the 8th or 9th or 4th — he — and swiftly comes).

Another (The odd dots of the 15 houses — or he is ill).

On the same person being abroad and about to return (Look at the 7th lot and the 12th — his own affairs).

Whether he comes quickly or not (See the 9th — and he comes quickly). Whether he is alive or dead (See the 2nd and the 8th — he has died). Concerning the entry and finding of a matter (If the 1st and the 2nd sit in their places, the finding of hope). Whether I profit (See the 1st and 2nd — or of relatives). Another (Taking the odd grains of the 15 houses — but if 30, from the people). Information concerning brothers (When the lord of the 6th house falls — God alone is true).

On a trivial [= worthless] matter (See the 1st and 2nd, 9th and 4th, 3rd and 10th — in red).

On captives (See the 9th and the originals of the journey and flight).

Περὶ δούλων ἀγορᾶς (Ἐὰν πέσοι [*sic*] ὁ εἰς τὸν θ' καὶ ια' ἢ β' ἢ ς' ἢ ι' — εἰ δ' οὖν κακήν).

Γ. 278. On the planting of trees (If you wish to plant trees [redacted] has in relation to the lord of the house). [redacted] Apomasaris = cod. Ital. 18, f. 273; Rom. 2, f. 59, cap. pvZ'. Arabic [sic] names [sic] of the twelve Zodiac Signs (Aries is called by the Arabs hamal — Pisces hut). Cod. Ital. 18, f. 327. On finding the horoscope of the year (Take the years from the creation of the world — and look at the table, and the text breaks off at the bottom of the page). — Note these words: let the years from the creation of the world be Γ Eθ', from which it appears that these were written in the year 1461 A.D. — Cf. cod. German. 25, f. 1; Paris. 47, f. 140. Γ. 279. Beginning of the straight path of the great teacher Lord Peter Theoktonikos toward the art of alchemy. At the end of f. 288: Here was completed the pure path of brother Albertus Theoktonikos, the great philosopher of alchemy, written by me, George, the teacher of Midiates. Cf. Catal. des mss. alchim., t. I, p. 65 ff., where the alchemical chapters also [redacted] found at ff. 288–293 are individually catalogued.

The greater part of f. 293 and the whole of f. 294 are blank.

F. 295. Oneirocriticon of Syrim (Having labored greatly [sic] in searching out my master — through which the outcome of future events is foreknown). There follow on ff. 295–315 chapters numbered ρκγ' with numerals in the margin, and thirty-seven without numbers. — This is the oneirocriticon of Achmet, son of Serim, which Rigaltius published together with the five books of Artemidorus in 1603. Many passages, however, differ from Rigaltius's text. Cf. Ruelle, Revue des Études grecques, VII, 1894, p. 307 ff. and 1910, p. 307.

F. 315-318v. Ἕτερος ὀνειροκρίτης Μανουὴλ τοῦ Παλαιολόγου. Constat capitulis quadraginta sex, adhuc ineditis. Cf. Ruelle, *Revue des Études grecques*, VII, p. 309.

F. 341v. Post finem lexici sequitur spatium vacuum, deinde hebraicis litteris titulus Περὶ θησαυροῦ πρᾶξις τοῦ Ἀπολλωνίου (Ταῦτα γράφε ἐν δέρματι — εἰ ἔστιν ἢ οὔ). Cf. supra, f. 247v.— Deinde Περὶ θησαυροῦ (Ὀφείλει τὸ πρῶτον ἁγνεύσθαι [*sic*] ἑαυτὸν ἡμέρας ιδ' νηστεύων — καὶ εὑρήσεις τὸ ποθῆς [*sic*]). Ultimum cap. mutilum, ut videtur, f. 342v desinit. — Has formulas edidit Preisendanz, *Byzantinisch-Neugriechische Jahrbücher*, III, p. 273-282.

5. Cod. Parisinus 2420. — Chartac., cm. 31 × 11, ff. 259 (praefixa sunt 4 folia vacua et index recentior in duobus foliis maioribus, sequuntur 7 folia vacua). F. 252 : Τέλος εἴληφεν ὧδε ,αφν' (= 1550 p. C. n.). Totum codicem descripsit Christophorus Auer, teste Henrico Omont, *Inventaire*, t. II, p. 257. Olim Colbertinus - Regius 2079. — Cf. Omont, *l. c.* ; Boll, *Catal.*, II, pp. 138, 152.

Descriptus est hic codex ex Parisino 2424, nostro 9, ordine tantum mutato. Codicis 9 autem archetypus est cod. 10, qui infra accurate recognoscetur. Pars prior huius libri (ff. 1-226) cum archetypo contulimus (ff. 1-148).

Ff. 1-65, capp. α'-ρξβ' = cod. 10, f. 42v-84v, cap. ο'-σλζ'. Itaque incipit cap. Λέοντος φιλοσόφου [in mrg. alia manu Θεοφίλου] περὶ βασιλείας καὶ ἀρχόντων. Deinde inveniuntur inter alia excerpta, f. 6v Pauli (= cod. 10, f. 46v); f. 22 Theodosii (= f. 57); f. 24v Dorothei (= f. 58v); f. 30 Valentis (= f. 62); f. 45 Demetrii (= f. 72); f. 53 Valentis (= f. 76); f. 53v Rhetorii (= f. 77); f. 54 Dorothei (= ibid.); f. 59 Maximi et Hephaestionis (= f. 80v). Desinit f. 65v, cap. ρξβ'. Πότε ὁ κλῆρος τῆς τύχης κολλᾷ τῷ διαμέτρῳ τοῦ Ἄρεως (= f. 84).

Ff. 66-66 vacua sunt.

Ff. 69-139v = cod. 10, ff. 1-42v, capp. α'-ξς'. Ergo incipit opusculo Hermetis de duodecim locis. Inveniuntur deinde, inter alia excerpta, f. 88 Iuliani (= 10, f. 11); f. 96 Critodemi (= f. 15); f. 105v Valentis (= f. 17v); f. 109v Rhetorii (= f. 23); f. 113 Maximi (= f. 24v); f. 137v Deucalionis (= f. 40v).

F. 315–318. Another oneirocriticon of Manuel Palaeologus. It consists of forty-six chapters, still unedited. Cf. Ruelle, Revue des Études grecques, VII, p. 309.

F. 319. An expounded book called a lexicon [sic], comprising explanations of terms, properties [sic] of herbs and ailments, and of the twenty-four elements ("Alpha, the element, from alphō meaning I find: ocimum, the basil").

F. 341. After the end of the lexicon there follows a blank space, then a title written in Hebrew letters: Περί θησαυροῦ πρᾶξις, of Apollonius (Write these on skin — whether it is or is not). Cf. above, f. 247. Then follows Περί θησαυροῦ (One must first purify [sic] oneself, fasting for fourteen days — and you will find what you desire [sic]). The final chapter, apparently mutilated, ends at f. 342. — These formulae were edited by Preisendanz, Byzantinisch-Neugriechische Jahrbücher, III, pp. 273–282.

5. God. Parisinus 2420. Paper, cm. 31 × 11, ff. 259 (prefixed are 4 blank leaves and a more recent index in two larger leaves, followed by 7 blank leaves). F. 252: Τέλος ἐπλήρωθεν ὧδε ,αφν' (= 1550 A.D.). The entire codex was described by Christophorus Auer, as attested by Henri Omont, Inventaire, t. II, p. 257. Formerly Colbertinus Regius 2079. Cf. Omont, l. c.; Boll, Catal., II, pp. 138, 152.

This codex was copied from Parisinus 2424, our no. 9, with only the order changed. The archetype of codex 9, however, is cod. 10, which will be examined in detail below. The earlier portion of this book (ff. 1–226) we collated with the archetype (ff. 1–148).

Ff. 1–65, capp. α'–ρβ' of cod. 10, f. 42v–84v, cap. ο'–ολζ'. Thus it begins with the chapter of Leo the Philosopher [in the margin, in another hand: Theophilus] On Kingship and Rulers. Then among other excerpts are found: f. 6v Paulus (= cod. 10, f. 46); f. 22 Theodosius (= f. 57); f. 24v Dorotheus (= f. 58); f. 30 Valens (= f. 62); f. 45 Demetrius (= f. 72); f. 53 Valens (= f. 76); f. 53 Rhetorius (= f. 77); f. 54 Dorotheus (= ibid.); f. 59 Maximus and Hephaestion (= f. 80v). It ends at f. 65v, cap. ρξβ'. When the Lot of Fortune is in conjunction with the diameter of Mars (= f. 84).

Ff. 66–68 are blank.

Ff. 69–139 = cod. 10, ff. 1–42, capp. α'–εζ'. Thus it begins with the short treatise of Hermes on the twelve places. Then among other excerpts are found: f. 88 Julianus (= 10, f. 11); f. 96 Critodemus (= f. 15); f. 105 Valens (= f. 17); f. 109v Rhetorius (= f. 23); f. 113 Maximus (= f. 24v); f. 137 Deucalion (= f. 40v).

F. 140, quod vacuum relictum erat, manus recentior indicem exiguum addidit.

Ff. 141-226 = cod. 10, ff. 89v-148, capp. σλη'-τοδ' nisi quod quaternionem ff. 205-212 bibliopega perperam transposuit. Item inter alia inveniuntur capita quorum auctores nominantur : f. 155v Zoroastri (= f. 78v); f. 171 ss. Theophili (= f. 108v ss.), f. 180 Manethonis (= f. 115); f. 185 Teucri (= f. 119v); f. 187 Theopatrii (= f. 121); f. 190v Dorothei (= f. 124v); f. 194 Hipparchi (= f. 126v); f. 198 Zoroastri (= f. 136); f. 206 Critodemi (= f. 138); f. 214 Valentis (= f. 142v). Desinit f. 246v, cap. Περὶ τῶν κατ' εἶδος ἐκ τῆς τῶν ἀστέρων φύσεως (= f. 148) et sicut in codice 9 sequitur post hoc capitulum subscriptio Τέλος τῶν κεφαλαίων τοῦ παρόντος βιβλίου.

Ff. 227-259 = cod. 9, ff. 204v-225 (quae iam ex codice 10 descripta non sunt). Incipit f. 227 Περὶ Ἡλίου ἀπὸ ποίου ζῳδίου ἄρχεται καὶ πότε εἰσέρχεται ἐν ἑνὶ ἑκάστῳ τούτων καὶ πῶς δεῖ εὑρίσκειν αὐτὸν (= cod. 9, f. 204v). Desinit in cap. Περὶ σημασιῶν τῶν πολευόντων καὶ διεπόντων (= 9, f. 223) verbis λευκὸς ὑποκυρτίων. — Sequuntur septem folia vacua.

Folium unum huius codicis in cod. 2421 (= 6) insertum est.

**6.** Cod. Paris. Gr. 2421. — Chartaceus, ff. 65 (+ 13 vacua), cm. 31 × 21, saec. XVI scriptus manu Christophori Auer teste Henrico Omont, *Inventaire*, t. II, p. 258. Olim ex bibliotheca de Mesmes in Colbertinam migravit. Colbertinus-Regius 1240. — Cf. Tannery, *Revue des Études grecques*, XI, 1898, p. 96 ss.

Post septem folia vacua, insertum est fol. 1 forma minus, quod ad cod. 5 pertinet (post f. 259). Cetera ex codice 9 descripta sunt.

F. 2. Βασιλεῖ Πτολεμαίῳ Ἀστράμψος [*sic*] ἱερεὺς καὶ βίβλων ἐπισφραγιστὴς ἰδίῳ δεσπότῃ χαίρειν (Ὅτι μηδὲν ὤφειλέν σε τῶν,..). Des. f. 16 : Τέλος σὺν θεῷ δεκάδων τοῦ παρόντος βιβλίου = cod. 9, f. 226-239. - F. 16-17v. Tabulae : Ὅτε συντρέχωσιν οἱ ἀστέρες εἰς ἓν οἴκημα τί ἀποτελοῦσιν. — Ὅταν βλέπωσιν οἱ ἀστέρες ἀλλήλους κατὰ διάμετρον. — Des. : Τέλος τῆς θεωρίας τῶν ἀστέρων = cod. 9, f. 239v-240. — Ff. 18-20 vacant. — F. 21. Ἀρχὴ σύν θεῷ τοῦ Πυθαγορικοῦ λαξευτηρίου ἤτοι τοῦ ῥαβολίου οὕτω πως λεγομένου Περσιστί = cod. 9, f. 163v-189v. — F. 62v vacat. — F. 63. Πόθεν γίνονται κομῖται [*sic*] = cod. 9, f. 190.

F. 65. Περὶ τῶν ἀστέρων τῶν καλουμένων διαττόντων καὶ τῆς ἐξ αὐτῶν σημειώσεως. = Ibidem.

F. 140, where a space had been left blank, a more recent hand added a small index.

Ff. 141–226 = cod. 10, ff. 89v–148, capp. α'η–τοδ', except that the binder incorrectly transposed the quire ff. 205–212. Among other things, chapters are found whose authors are named: f. 155 Zoroaster (= f. 78v); f. 171 ff. Theophilus (= f. 108v ff.); f. 180 Manetho (= f. 115); f. 185 Teucer (= f. 119); f. 187 Theopatrius (= f. 121); f. 190 Dorotheus (= f. 124v); f. 194 Hipparchus (= f. 126v); f. 198 Zoroaster (= f. 136); f. 206 Critodemus (= f. 138); f. 214 Valens (= f. 142v). It ends at f. 246v, with the chapter Περὶ τῶν κατ' εἶδος ἐκ τῆς τῶν ἀστέρων φύσεως (= f. 148), and just as in codex 9, after this chapter follows the subscription Τέλος τῶν κεφαλαίων τοῦ παρόντος βιβλίου.

Ff. 227–259 = cod. 9, ff. 204–225 (which were not copied from codex 10). It begins at f. 227 with Περὶ Ηλίου ἀπὸ ποίου ζῳδίου ἄρχεται καὶ πότε εἰσέρχεται ἐν ἑνὶ ἑκάστῳ τούτων καὶ πῶς δεῖ εὑρίσκειν αὐτὸν (= cod. 9, f. 204). It ends in the chapter Περὶ σημασιῶν τῶν πολευόντων καὶ διεπόντων (= cod. 9, f. 223) with the words λευκὸς ὑποκυρτίων. — Seven blank leaves follow.

One leaf of this codex has been inserted into cod. 2421 (= 6).

6. Cod. Paris. Gr. 2421. — Paper, ff. 65 (of which 13 are blank), cm. 31 × 21, written in the 16th century in the hand of Christophorus Auer, as attested by Henri Omont, Inventaire, t. II, p. 258. It formerly passed from the library of de Mesnies into the Colbertina. Colbertinus-Regius 1940. Cf. Tannery, Revue des Études grecques, XI, 1898, p. 96 ff.

After seven blank folios, folio 1 (of smaller format) has been inserted, which belongs to cod. 5 (after f. 259). The remaining contents are copied from codex 9. Γ.2.

To King Ptolemy, Astrampsus [sic], priest and sealer of books, greets his own master (Because you owed nothing of the...). (Camillus Le Tellier, bibliothecarius Regis, 1675-1717). — Mediceus-Regius 2815. — Cf. Omont, *Inventaire*, t. II, p. 258.

Ff. 1-24 collectanea praebent quae sibi congessit astrologus saec. XII, ut videtur, nam f. 18v exemplum profert anni 1132 p. C. n. (κατὰ τὴν ι' ἰνδ. τοῦ ,ϛχμ' ἔτους).
Initium codicis deesse videtur.

F. 1. Περὶ ἀνατολῆς Σελήνης δύσεως καὶ μέσης (Ἡ τῆς Σελήνης ἀνατολή ἐστιν ὅταν ἀπέχει τοῦ Ἡλίου — ὡρῶν β').
Περὶ τῶν πολευόντων καὶ διεπόντων τὰς ἡμερῶν ὥρας (Sequuntur tabulae : ὥραι τῶν ἡμερῶν τῆς κυριακῆς et ὥραι τῶν νυκτῶν τῆς δευτέρας).

Which of the stones serve for the cessation of storms and the surging of the sea. — Ibid. f. 190-191.

Ends at f. 65v. — Five blank folios follow.

27. Cod. Paris. Gr. 2422. Paper, paginated 156, 28 × 19 cm, 16th century. Formerly in the library of de Mesmes, then in the Colbertina. Colbertinus-Regius 2202. — Cf. Omont, Inventaire, vol. II, p. 258; Graff, Bull. Acad. Sciences de Saint-Pétersbourg, VIII, 1864, p. 21 ff.; Tannery, Revue des études grecques, XI, 1898, p. 96 ff.

This book contains the same material as cod. 6, from which it was copied.

After the prefixed folio with Latin indices, it begins:

Pag. 1. Βασιλεί Πτολεμαίῳ 'Αστρμψυχος ἱερεὺς καὶ βίβλων ἐπισφραγιστὴς ἰδίῳ δεσπότῃ χαίρειν — up to pag. 41: Τέλος τῆς θεωρίας τῶν ἀστέρων = cod. 5, ff. 2-17v; cod. 9, ff. 226- 239. Pag. 42 is blank. Pag. 43. Αρχή σὺν θεῷ τοῦ Πυθαγορικοῦ λαξευτηρίου etc. = cod. 5, f. 21-61; cod. 9, ff. 163-189. Pag. 143. Πόθεν γίνονται κομίται up to pag. 149 === cod. 5, fr. 63-64r; cod. 9, f. 190, where more may be found. Pp. 150-154 are blank. — — Pag. 155: twelve circles in which are noted the planets that have their exaltations (υψώματα) and depressions (ταπεινώματα) in each sign of the zodiac. — Pag. 156. Table of astrological symbols with interpretation, etc. Cf. cod. 4, f. 274; Catal., IV, tab. I-II.

8. Cod. Paris. gr. 2423, 13th–14th century. Bombycine paper, ff. 158; dimensions 0.250 x 0.165 m. On a prefixed paper folio is written: A notice of codex 2815 in the hand of Matthaei Devarii (librarian of Cardinal Nicolaus Ridolfi, cf. above p. 20 on cod. 4): Τάδε ἔνεστιν ἐν τῇδε τῇ βίβλῳ etc. After the death of Cardinal Ridolfi (1550) it passed into the libraries of Pietro Strozzi († 1589) and Catherine de' Medici. — F. 158, a hand of the 17th century added:

The book about itself:
I was once bare; but Camillus
Tellerides took pity on me; and clothed me in a fine garment.

(Camillus Le Tellier, Royal Librarian, 1675–1717). — Mediceus-Royal 2815 — Cf. Omont, Inventaire, vol. II, p. 258.

Ff. 1–24 present collectanea assembled by an astrologer apparently of the 12th century, since f. 18v offers an example from the year 1132 A.D. (κατὰ τὴν ι' ἰνδ. τοῦ ϛχμ' ἔτους).

The beginning of the codex appears to be missing.

F. 1. On the Rising, Setting, and Midpoint of the Moon (The rising of the Moon occurs when it is distant from the Sun by 2 hours).

On those that govern and rule the hours of the days (There follow tables: hours of the days of Sunday and hours of the nights of Monday).

F. 1v. Ὥραι τῶν ἡμερῶν τῆς δευτέρας, ὧραι τῶν νυκτῶν τῆς τρίτης etc.

F. 3. Ἡλί(ου) εἰς ἐκλείψις [*sic*] ἀποτελεσματική (Ἐὰν ἔκλειψις γένηται ἢ Ἡλίου ἢ Σελήνης ἐν Ζυγῷ — ἀνθρώπων θλῖψιν καὶ στενοχωρίαν, δένδρων ἀκαρπίαν καὶ λιμόν). Pergit sine titulo: Ἐκλείπει δὲ ὁ Ἥλιος τοῦ σώματος τῆς Σελήνης ὥσπερ τι μεσότοιχον γενομένου — τῶν ἡλιακῶν ἐκλείψεων κανόν(ιον) ἐκ τῶν Πτολεμαίου.

F. 3v. Ἐνιαυτ(οῦ) σημείωσις ἐπιτολῶν καὶ δυσμῶν ἐκ τῶν ἐν οὐρανῷ φαινομένων ἐκ τοῦ Κλαυδίου τοῦ Θούσκου [*sic*] καθ' ἑρμηνείαν καὶ λέξιν = Lydi *de Ostentis*², ed. Wachsmuth, p. 117, 9-121, 17. Hic codex, editori ignotus, mensem Ianuarium tantum praebet. — Cf. supra cod. 1, f. 17v; 4, f. 33v.

F. 4. Περὶ τοῦ[*sic*]μηνοευρεσίου μεθόδου (Τὸ μηνοευρέσιον κύκλους ἔχει ἑπτά — εἰς δόξαν Θεοῦ ὁ χωρῶν χωρείτω).

F. 4v. Ἡ ἐπιγραφὴ τῆς ἐκθέσεως (ΑΑ ἐνιαυσιαῖος, ΒΒ ἐνιαυσιαῖος — ὁ ζ' δεκαμηνιαῖος). Χρὴ γινώσκειν ὅτι οἱ δεκαμηνιαῖοι κύκλοι δύο μῆνας ψηφίζονται Ἰανν(ουα)ρ(ίου) ἐφεξῆς.

F. 5. Αἱ τῶν μηνῶν ἐπακταί (Ἰαννουαρίου [*sic*] α' — Δεκεμβρίου ς').
Περὶ εὑρέσεως ἑκάστης ἡμέρας (Ἄρτι προτίθει ταῖς ἐπακταῖς — οἵαν ζητεῖς).
Περὶ τοῦ γνῶναι ἐν ποίῳ ζῳδίῳ ἵσταται ἡ Σελήνη καὶ ποσῶν μοιρῶν ἐστιν (Ἀρίθμησον τὴν ποσότητα τῆς Σελήνης – τῷ ζῳδίῳ ἐστὶν ἡ Σελήνη καὶ τοσούτων μοιρῶν).

F. 5v. Ἐπίγνωσις τοῦ ὡροσκόπου (Εἰ θέλεις γνῶναι ἐν ποίῳ ζῳδίῳ ἀνατέλλει καὶ δύνει ὁ Ἥλιος — ἤγουν τὸ ζ' ζῳδίον)
Περὶ τοῦ γνῶναι ἐν ποίῳ ζῳδίῳ ἵσταται καὶ ποίας μοίρας ἐστίν (Κράτει ἀπὸ μηνὸς Σεπτ(εμβ)ρ(ίου) ἡμέρας λ', Ὀκτω(β)ρ(ίου) λα' — καὶ τοσούτων μοιρῶν).

F. 6. Περὶ τοῦ γνῶναι ἐν ποίῳ ζῳδίῳ ἐστὶν ἡ Σελήνη (Ἐὰν θέλῃς γνῶναι ἐν ποίῳ ζῳδίῳ — καὶ οὕτως ψηφίζων εὑρήσεις).
Περὶ τοῦ ζῳδιακοῦ κύκλου (Εἰ θέλεις γνῶναι ἐν ποίῳ ζῳδίῳ — οὕτως ψηφίζων εὑρήσεις).
Περὶ τῶν σημείων καὶ ὀνομάτων τῶν ζ' πλανητῶν ἀστέρων τῶν ἐν ταῖς σφαίραις (Ἥλιος α' ἀνάλογον τῷ χρυσῷ, Σελήνη β' ἀνάλογον τῷ ἀργύρῳ, Ἄρης γ' σιδήρῳ, Ἑρμῆς δ' κασιτήριῳ (*sic*), Ζεὺς ε' ὑδραργύρῳ, Ἀφροδίτη ς' χαλκῷ, Κρόνος ζ' μολίβδῳ). — Cf. supra cod. 4, f. 46v.

F. 6v. Sequitur, tabula quadrata exhibens caeli climata quattuor, ventos cardinales, signa zodiaci. Incipit textus:

F. 7. Περὶ τοῦ γνῶναι ποῖος ἄνεμος πνεῖ. πίναξ βρο(ν)τῶν χειμώνων, βροχῶν καὶ σεισμῶν (Μῆκος, στάσις, εὖρος, πλάτος...

Γ.1. Hours of the days of the second, hours of the nights of the third, etc.

F. 3. A solar eclipse with astrological effects (If an eclipse of either the Sun or the Moon occurs in Libra, it portends affliction and distress among men, barrenness of trees, and famine). Continues without title: The Sun is eclipsed when the body of the Moon intervenes like a partition — a table of solar eclipses) from the works of Ptolemy.

Γ. 3. A record of the annual risings and settings of the heavenly phenomena visible in the sky, from Claudius Tuscus [sic], according to his interpretation and text == Lydus, De Ostentis, ed. Wachsmuth, p. 117, 9–121, 17. This codex, unknown to the editor, preserves only the month of January. — Cf. above cod. 1, f. 17v; 4, f. 33v. Oh the method of finding the month [sic]

F. 4. (The method of finding the month contains seven cycles — to the glory of God, let him who can comprehend, comprehend).

C. 47. The heading of the exposition (AA annual, BB annual — the 7th ten-monthly). One must know that the ten-monthly cycles count two months from January onwards.

F. 5. The epacts of the months (January [sic] 1st – December 6th). On finding each day (Now add to the epacts — whichever one you seek).

On knowing in which Sign the Moon stands and how many degrees it is (Count the quantity of the Moon – in which Sign the Moon is and of how many degrees).

Γ. 5'. Recognition of the horoscope (If you wish to know in which Sign the Sun rises and sets – that is, the 7th Sign)

On knowing in which Sign it stands and what degree it is (Count from the month of September) 30 days, October) 31 – and of so many degrees).

F. 6. On knowing in which Sign the Moon is (If you wish to know in which Sign – and thus by calculating you will find).

On the Zodiacal cycle (If you wish to know in which Sign — thus by calculating you will find).

On the signs and names of the 7 planetary stars in the spheres (Sun 1st corresponding to gold, Moon 2nd corresponding to silver, Mars 3rd to iron, Mercury 4th to tin (sic), Zeus 5th to quicksilver, Venus 6th to bronze, Saturn 7th to lead). -- Cf. supra cod. 4, f. 46.

F. 6. What follows is a square table presenting the four celestial climates, the cardinal winds, and the signs of the zodiac. The text begins:

F. 7. On knowing which wind blows, a table of thunderstorms, winter storms, rains and earthquakes (Length, position, breadth, latitude...

Deinde : "Οτε σφαιροειδὴς εὑρίσκεται, βροντῶν, χειμώνων — πᾶν τετράγωνον).
Ὑπόδειγμα εἰσαγωγικὸν περὶ τῶν ἐπ' ἀλλήλων ἑπτὰ ζωνῶν αἵτινές εἰσιν ἀρεταί, τέχναι, παιδεῖαι κ. τ. λ.

F. 7v. Figura. Septem circuli, a communi centro circumacti, cum inscriptionibus. In primo : Κρόνος κυριεύσας τὴν πρώτην καὶ ἀνωτάτην ζώνην περιοδεύων τὴν ἅπασαν περιφέρειαν αὐτοῦ ἐν ἔτεσι τριάκοντα διὰ τὸ μῆκος τῆς ζώνης καὶ τὸ γῆρας τοῦ ἀστέρος.
In margine superiore notula litteris minoribus scripta nunc evanidis de virtute et philosophia. L. 3 sententia Heracliti affertur (Ἀλλ' ἐοίκασιν οἱ ἄνθρωποι κατὰ τὸν παλαιὸν Ἡράκλειτον· χρυσὸν οἱ διζόμενοι γῆν κ. τ. λ. = Fr. 22 Diels, 8 Bywater). Des. : περιφρονήσαντα ἁπαξαπάντων ὡς μιαρῶν καὶ οὐδενὸς ἀξίων.
Περὶ εὑρέσεως τοῦ ὡροσκόπου (Δεῖ γινώσκειν ὅτι ἀπὸ τοῦ Ἡλίου εὑρίσκεται ὁ ὡροσκόπος. Porro Πολλάκις δὲ σπουδάζουσι καὶ ἀπὸ κλεψύδρας. ἐὰν σφαλῇ ὁ ὡροσκόπος, ἐσφάλη ὁ ὅλος θεμέλιος. Des. : ἢ κατὰ ἀριστερὰν ἢ κατὰ διάμετρον).

F. 8v. Ἁρμοὶ Σελήνης ἐν οἷς παρατηρεῖσθαι δεῖ τὰς γενέσεις τῶν παίδων (Ἐνιαυτὸν τοῦτον τὸν τρόπον διαιροῦμεν· Ἀπὸ Πλειάδων — ὁμοῦ γίνονται ἡμέραι τξε'). — Edidit Boll, *Catal.*, VII, p. 162.
Τὰ ἄστρα ποσάκις δύνει καὶ ποσάκις ἀνατέλλει (Πλειάδες ἀνατέλλουσι δὶς πρωὶ καὶ ἑσπέρας — Προτρυγητὴς ἅπαξ ἡμέρας). — Edidit Boll, ibid., p. 163, 2.

F. 9. Περὶ Ἀναβιβάζοντος λόγος πρῶτος (Βαβυλώνιοι ἤγουν Χαλδαῖοι — ἡ οὐρὰ αὐτοῦ). — Edetur in appendice.

F. 9v. Περὶ Ἀναβιβάζοντος λόγος δεύτερος (Ἔστι δὲ ὁ Ἀναβιβάζων — εἰς τὰ σώματα). — Partim edetur in appendice.

F. 10v. Sine titulo (Πρῶτος ὁ Ἥλιος ὁ δεξιὸς ὀφθαλμὸς καὶ ἡ Σελήνη ὁ ἀριστερός — ὑψώματα ταπειώνματα). Inest figura : circuli a communi centro circumlati cum nominibus duodecim locorum, signis zodiaci et planetarum.

F. 11. Ἑρμηνεία περὶ τῶν τριγώνων τῶν ιβ' ζῳδίων καὶ τῶν ὑψωμάτων αὐτῶν (Κριὸς οἶκος Ἄρεως, ὑψοῦται ὁ Ἥλιος ιθ' μοίρᾳ καὶ ταπεινοῦται Κρόνος κα' μοίρᾳ — ἔχει δεκανοὺς γ' · α' Κρόνου, β' Διός, γ' Ἄρεως).

F. 12. Περὶ δοξῶν καὶ ἐλπίδων καὶ τύχης καὶ περὶ ζωῆς καὶ ψυχῆς (Α. Ζυγὸς οἶκος Ἀφροδίτης, δεκανοὶ Διὸς Κρόνου Σελήνης... Pergit disserens de effectibus duodecim signorum. Des. : καὶ ταῦτα μὲν διὰ τῶν ιβ' κέντρων ὑπεστησάμην τῆς κεντροσ [litt. obscurae]).

Then: "When it is found to be spherical, of thunderstorms, winter storms every square).

An introductory example concerning the seven zones one upon another, which are virtues, arts, disciplines, etc.

F. 7. Figure. Seven circles, drawn from a common center, with inscriptions. In the first: Saturn, ruling the first and highest zone, traversing its entire circumference in thirty years on account of the length of the zone and the age of the star.

In the upper margin a small note written in smaller letters, now faded, on virtue and philosophy. In line 3 a saying of Heraclitus is cited (But men seem, according to the ancient Heraclitus, likė gold-seekers digging the earth, etc. === Fr. 22 Diels, 8 Bywater). Ends: having despised all things at once as impure and worthless.

On finding the horoscope (One must know that the horoscope is found from the Sun. Furthermore, they often endeavor to find it also by the water-clock. If the horoscope errs, the entire foundation has erred. Ends: either to the left or diametrically opposite). Γ. 8.

The joints of the Moon in which the nativities of children must be observed (We divide this year in the following manner: From the Pleiades... the donn[redacted] days in total come to 365). — Edited by Boll, Catal., VII, 162.

How many times the stars set and how many times they rise (The Pleiades rise twice, in the morning and in the evening – Vindemiatrix rises once during the [redacted] day). Edited by Boll, ibid., p. 163, 2.

F. 9. First discourse on the Ascending Node (The Babylonians, that is, the Chaldeans – its tail). — To be pu[redacted]shed in the appendix.

Γ. 9. Second discourse on the Ascending Node (The Ascending Node is into [redacted] the bodies). - Partly to be published in the appendix.

F. 10. Without title (First the Sun is the right eye and the Moon the left – exaltations and dejections). There is a figure: circles drawn from a common center with the names of the twelve places, the signs of the zodiac and the planets.

C. 11. Interpretation concerning the triplicities of the twelve Zodiac signs and their exaltations (Aries, house of Mars, the Sun is exalted in the 19th degree and Saturn is in dejection in the 21st degree — it has th[redacted]e decans: the 1st of Saturn, the 2nd of Jupiter, the 3rd of Mars).

Γ. 12. On opinions, hopes, fortune, life, and the soul (A. Libra, house of Venus, decans of Jupiter, Saturn, Moon... Continues discussing the effects of the twelve signs. Ending: and these things I have set forth through the twelve centers of the kentrod [letters obscure]).

F. 13v. Περὶ τῶν θηλυκῶν καὶ ἀρρενικῶν ζῳδίων (Ἀρενικὰ [*sic*] ζῴδια ἡμερινά· ♈ ♌ ♍ ♎ ♒ — Φαέθων φαίνων).
Περὶ εὑρέσεως τοῦ τῆς τύχης κλήρου (Ὁ τῆς τύχης κλῆρος εὑρίσκεται οὕτως — ἀπὸ τῶν προγραφέντων καὶ τῶν γραφησομένων ἐφεξῆς γνώσῃ σαφῶς).

F. 14. Περὶ τῶν κλήρων (Κλῆρος τύχης ἀπὸ Ἡλίου ἐπὶ Σελήνην καὶ τὰ ἴσα ἀπὸ ὡροσκόπου, ἐπὶ δὲ νυκτὸς ἀνάπαλιν ἀπὸ Σελήνης ἐπὶ Ἥλιον — οὗτοι οἱ κλῆροι πάντα τὰ ἴσα). — Differt a textu edito *Catal.*, I, p. 170.

F. 15v. Περὶ τῶν κλήρων ἀπὸ ὡροσκόπου ἐκτὸς τῶν φαινομένων (Λαβὼν τὸν ἀριθμὸν τοῦ ὑποδεδειγμένου σοι — ἐκεῖ πίπτει ὁ ζητούμενος κλῆρος).
Περὶ τοῦ γνῶναι τὸν ὡροσκόπον (Κράτει τὰς ὥρας τῆς ἡμέρας — ὁ τοῦ δύνοντος δύνει).
Περὶ τοῦ δύνοντος (Ὅτι δύνων ἐστὶ — τοῦ ζ' ζῳδίου).

F. 16. Ἐπίγνωσις τοῦ μεγέθους τῆς ἡμέρας πόσων ὡρῶν ἐστιν (Λαβὲ τοὺς παρακειμένους τῇ ὥρᾳ — δηλοῖ σκέπεσθαι αὐτόν).

F. 16v. Περὶ ἐποχῶν τῶν πλανητῶν (Ἐποχὴ Κρόνου ποιεῖ κατὰ τὸν πύργον λ' μῆνας κατὰ μοῖραν μῆνα — ἐποχὴ Ἑρμοῦ ἐκ τῆς Παρθένου μοίρας β').
Pergit sine titulo (Στηριγμὸς Κρόνου ὁμοίως — ὁδεύει ὁ Ἑρμῆς).

F. 17. Περὶ τοῦ πόσα λεπτὰ περιπατεῖ ὁ Ἥλιος τὸ ἡμερονύκτιον (Ὅταν εἰς Κριὸν καὶ Ταῦρον καὶ Δίδυμον [*sic*] καὶ Καρκίνον — εἰς τοὺς Ἰχθύας λεπτὰ νθ').
Ἕκαστον ζῴδιον πῶς ἀνατέλλει καὶ δύνει (Ἀπὸ Ταύρου ἕως Ζυγοῦ — ὁρῶσιν ἀλλήλους).

F. 17v. Ζῴδια προτάσσοντα καὶ ὑπακούοντα (Ὁ Κριὸς προτάσσεται — μὴ ὁρώμενος ὑπ' αὐτῶν).
Ἀποτελεσματική (Inc. Οἱ παλαιοὶ καὶ τὰ περὶ τοῦ ἱπποδρομίου... ). — Edetur in appendice.

F. 18v. Sine titulo (Καὶ τίνες εἰσὶν οἱ τόποι — ποῖος δὲ πολεύει). De planetarum affinitate cum signis zodiaci.

F. 20. Τόποι δέ εἰσι ιβ' (α' τόπος, ὅπου κατὰ τὸν καιρὸν ἐκεῖνον ἀνατέλλει ὁ Ἥλιος — ὑπὲρ γῆν).
Περὶ κέντρων (Κέντρα δέ εἰσι δ'. πρῶτον κέντρον ὁ ὡροσκόπος — καὶ χειμερινὴ ἡ γενομένη ἐν τῷ Αἰγοκέρωτι).

F. 21. Ὑπόδειγμα (Μηνὶ Μαρτίῳ κβ' ἡμέρᾳ δ' ὥρᾳ τῆς ἡμέρας θ'... Exemplum thematis geniturae — δηλοῖ καὶ ἀποδημίαν).

F. 21v. Περὶ τῶν οἴκων τῶν πλανητῶν καὶ ὑψωμάτων καὶ ταπεινωμάτων. Sequitur tabula.

F. 22. Μέθοδος δι' ἧς τις εὑρίσκει τὰς ἐφημερίδας τοῦ κανονίου προ-

Γ. 13. On the feminine and masculine Zodiac signs (Masculine [sic] Zodiac signs, diurnal: Jupiter, Saturn).

On finding the Lot of Fortune (The Lot of Fortune is found as follows — from the aforementioned and the written you will know clearly in what follows).

Γ. 14. On the Lots (The Lot of Fortune from the Sun to the Moon and the same distance from the Ascendant, but at night in reverse from the Moon to the the Sun – these lots are all equal). Differs from the text published in Catal., I, p. 170.

Γ. 15. On the Lots from the Ascendant outside the visible ones (Having taken the number indicated to you there falls the sought Lot).

On knowing the Ascendant (Keep the hours of the day — the one of the setting sets).

On the Setting (That which is setting — of the 7th Sign).

Γ. 16. Determination of the length of the day in hours (Take the numbers adjoining the hour — indicates that it is obscured). Γ. 16. On the stations of the planets (The station of Saturn produces according to the tower 30 months, one month per degree — the station of Mercury from the second degree of Virgo).

Continues without title (The stationary position of Saturn likewise ... Mercury travels).

Γ. 17. On how many minutes the Sun travels in a day and night (When in Aries and Taurus and Gemini [sic] and Cancer — in Pisces 59 minutes).

How Each Zodiac Sign Rises and Sets (From Taurus to Libra — they behold one another).

Γ. 17. Zodiac Signs that Precede and Those that Follow (Aries takes precedence — not beheld by them).

Apotelesmatica (Inc. The ancients and the matters concerning the hippodromium...). - — - To be published in the appendix.

F. 18. Sine titulo (And these are the places — ποῖος δὲ πολεύει). On the affinity of the planets with the signs of the zodiac.

Γ. 20. The places are twelve (the 1st place, where at that time the Sun rises – above the earth).

On the centers (The centers are four. The first center is the horoscope and the wintry one is that which occurs in Capricorn).

E. 21. Example (On the 22nd day of the month of March, at the 4th hour of the day — Example of a nativity chart — it also indicates a journey abroad).

Γ. 21. On the houses of the planets and their exaltations and dejections . A table follows.

Γ. 22. A method by which one finds the ephemerides of the canon preceding

F. 1ᵛ. Tabula capitulorum a folio 44ᵛ ad folium 163ᵛ. Capitula foliorum 1-44 omissa esse videntur, quia archetypi tabula principio mutila erat. — Numeri tabulae iam non congruunt cum notis textui adscriptis, quae a manu posteriore correctae sunt. — Sub tabula f. 5ʳ : Καὶ ὁμοῦ εἰσι τὰ κεφάλαια τξ'.

F. 5ᵛ. Sine titulo. Textus incipit : Ὁ ιβ' τόπος καὶ μετακόσμιος καλούμενος... ut in cod. 10. — Ff. 1-163ʳ cum codicis 10 ff. 1-148ᵛ ita consentiunt ut ex eo descripta esse appareant vel certe ex eodem archetypo fluxerint. Excerpta quaedam, praesertim cum mutila essent, omisit librarius, materiam temere in duos libros divisit et capitula interdum aliis numeris signavit atque manus posterior cod. 10, ita ut eorum congruentia sit haecce :

Lib. I cap. primum sine numero = α' codicis 10.
Cap. α'-γ' (f. 17) = β'-δ' (f. 11-13ʳ).
Cap. δ' (f. 20ᵛ) = c. sine num. (f. 13ᵛ).
Capp. ε'-η' (f. 20ᵛ-22) = ε'-η' (f. 14-15).
Cap. θ' (f. 22) = c. sine num. (f. 15).
Cap. ι'-ιε' (f. 22ᵛ-24ᵛ) = θ-ιδ' (f. 15ᵛ-17ᵛ).
Cap. sine num. (f. 27) = ιε' (f. 19ᵛ).
Capp. ιϛ'-νϛ' (f. 28ᵛ-48ᵛ) = ιϛ'-νϛ' (f. 20-40).
Cap. νζ' (f. 49) = c. sine num. (f. 40ᵛ).

of the text (For example, let Saturn be today in the degree of Taurus ...). Commentary on the theme; it breaks off at the bottom of fol. 24v with the words: Venus governs according to the 2nd hour, and Hermes... It will be partly published in the appendix.
Hermes...

Following on f. 25, in another hand, is the treatise of John Philoponus on the use of the astrolabe, then (f. 36) Plutarch's book on the opinions of the philosophers (cf. Diels, Doxogr. Graeci, p. 35), and other works by various authors (cf. Omont, l. c.).

9. Cod. Paris. 2424. Parchment, ff. 241, mm. 245 × 180, written by a single scribe apparently at the end of the 14th century. — On the prefixed f°. A, in the hand of Angelus Vergecius: Astronomical collections whose compiler is not recorded here. — F. 1 is written in a 15th-century hand: Questo libro de astrologia me ha donato Gio(van)ni Plessa (vel Perlessa) de Maica presente Jacobo de Patras cognato de Juani Sartor el qual Jacobo fo intercessore de la donacion. Formerly Fontainebleau 71 (Omont, Catal. des mss. de Fontainebleau (1550 A.D.), p. 27). Regius DXXIII, 559, 2732. Labbe, Nova bibliotheca mss. librorum, 1653, p. 278, no. 460. Some notes on this codex were made by P. Tannery, Revue des Études grecques, vol. XI, 1898, p. 98 f. = Mémoires scientifiques published by Heiberg, IV, 1920, p. 354 ff. Cf. Omont, Inventaire, II, p. 258.

**F. 1v.** Table of chapters from folio 44 to folio 163. The chapters of folios 1–44 appear to have been omitted because the table of the archetype was mutilated at the beginning. — The numbers of the table no longer correspond to the notes appended to the text, which were corrected by a later hand. Below the table at f. 5: Καὶ dμοῦ eισι τὰ κεοάdaia τἔ'.

**F. 5v.** Without title. The text begins: Ο ιβ' τόπος καὶ μετακόσμιος καλού- μεVOS.. . as in cod. 10.—Ff. 1–163 agree with codex 10, ff. 1–148v so closely that they appear to have been copied from it, or at least to have derived from the same archetype. The scribe omitted certain excerpts, especially where they were mutilated, carelessly divided the material into two books, and sometimes marked the chapters with different numbers from those of the later hand of cod. 10, so that their correspondence is as follows:

Lib. I, first chapter without number = a' of codex 10.
Cap. a'–r' (f. 17) = B'–d' (f. 11–13).
**Cap. δ' (f. 20v) = c. sine num. (f. 13v).**
Capp. e'–n' (f. 20v–22) = '–n' (f. 14–15).
Cap. 8' (f. 22) = c. sine num. (f. 15).
Cap. '–te' (f. 22–24) = 0–18' (f. 15–17).
Cap. sine num. (f. 27) = te' (f. 19°).
Capp. 1–v' (f. 28"–48") = IG'–VG' (f. 20–40).
Cap. vZ' (f. 49) = c. sine num. (f. 40°).

Cap. νθ'-ξδ' (f. 49v-50) = νη'-ξγ' (f. 40-41v). — Omissum est cap. ξδ' (f. 41v) cod. 10.
Cap. ξε' (f. 50v) = ξε' (f. 52). — Omissa sunt capp. ξϛ', ξζ'.
Capp. ξϛ'-ξη' (f. 50v) = ξη'-ξθ' (f. 42v). Hic explicit liber primus.

Eodem modo in libro secundo numeri nonnumquam alio modo collocati sunt. Annotare sufficiat ubi textus differt :

Capp. α'-ιε' (f. 50v-55) = ο'-πδ' (f. 42v-47). — Omissum est caput πε' (f. 47).
Capp. ιϛ'-κα' (f. 55-56) = πϛ'-ϟ' (f. 47e-48r). — Omissa sunt capp. ϟα', ϟβ', ϟγ' (f. 48r).
Capp. κβ'-λβ' (f. 56v-57) = ϟδ'-ρδ' (f. 48-49).
Sequitur f. 57v lit. subrufo atramento : Ἄλλως (Ἐὰν ὁ κύριος τοῦ ὡροσκόπου — εἰς ἓν ζῴδιον τέθνηκε). [Eodem atramento supra ad cap. λα' in margine : Ἐν ἑτέρῳ βιβλίῳ γρ. τῶν θ' μοιρῶν τ^τ Ζυγῷ].
Capp. λγ'-με' (f. 57v-60) = ρε'-ριη' (f. 49v-52). — Omissum est capitulum ριθ' (f. 52).
Capp. μϛ'-ξβ' (f. 60r-63r) = ρκ'-ρλζ' (f. 52-55). — Omissum est cap. ρλη' (f. 55v).
Capp. ξγ'-ριθ' (f. 63v-74) = ρλθ'-ρϟδ' (f. 55v-65v). — Omissum est spatium vacuum f. 66r.
Capp. ρκ'-σ' (f. 74v-117) = ρϟε'-σξϛ' (f. 66v-102v). — Cohaerent in cap. σα' (f. 117v) capp. σξζ', σξη' (f. 102v).
Capp. σβ'-σλϛ' (f. 118-129) = σξθ'-τβ' (f. 103-113). — In cap. σλζ' (f. 129v) duo tituli τγ', τδ' (f. 114) confusi sunt.
Capp. σλη'-τκ' (f. 129-157v) = τε'-τξϛ' (f. 114-145v).
Capp. τκα'-τκϛ' (f. 157v-158v) in cod. 10, folio abscisso, perierunt; cf. ibidem f. 145v.
Capp. τκζ'-τλδ' (f. 159r-162v) = τξζ'-τοδ' (f. 146r-148r).
Post cap. τλδ' (f. 163r) legitur : Τέλος τῶν κεφαλαίων τοῦ παρόντος βιβλίου.

F. 163v. Ἀρχὴ σὺν Θεῷ τοῦ Πυθαγορικοῦ λαξευτηρίου ἤτοι τοῦ ῥαβολίου οὕτω πως λεγομένου Περσιστί. (Τὸ εἶδος τόδε ⁝⁝ τὸ ὄνομά ἐστι τοῦ λαχιάμ, ὅς ἐστι κύριος τοῦ πρώτου οἰκήματος — νουσρατοὺλ ταχὴλ ταρίχ). — Cf. cod. Ital. 18, f. 467; 29, f. 1; 30, f. 1; Paris. 4, f. 226v; 79, f. 83.

F. 166. Ἀρχὴ σὺν θεῷ Πυθαγορικοῦ λαξευτηρίου ἤτοι τοῦ ῥαβολίου οὕτω πως λεγομένου Περσιστί ( ⁝⁝ τὸ ὀσπήτον τοῦτον κέκληται λαχιάμ. Des. f. 188v; ... δηλοῖ δὲ καὶ πιττάκην [*sic*] ἐλθεῖν

Cap. v8'–d' (f. 49v–50) = νη'-ξγ' (f. 40-41v). — Omitted ch. Ed' (f. 41°) cod. 10.
Cap. ξε' (f. 50v) = ξε' (f. 52). — Chapters EG' and EZ' are omitted.
Chs. EG–En' (f. 50v) = En-20' (f. 42). Here the book ends. first.

In the same manner, in the second book the numbers are sometimes arranged differently. It suffices to note where the text differs:

Capp. a'-e' (f. 50-55) = o'-πd' (f. 42v-47). — Omitted Chapter me' (f. 47).
Capp. 1-κα' (f. 55-56) = πG'-q' (f. 47v-48r). — Omitted are Capp. qa', qβ', qr' (f. 48v).
Capp. κβ'-λβ' (f. 56-57) = qd-pd' (f. 48-49).
On f. 57 there follows, in reddish-brown ink: "λωγ (If the lord of the horoscope – has died in one zodiac sign). [In the same ink, above, in the margin at chapter λα': In another book, write of the 9 degrees in Libra].
Capp. λγ'-με' (f. 57v-60) = ρε'-ριη' (f. 49v-52). — Omitted is chapter pið' (f. 52).
Capp. μG-Eß' (f. 60-63") = pko-olz' (f. 52-55). — Omitted is chap. phn' (f. 55°).
Cap. Er'-pie' (b. 63-74) = rlth'-rad' (f. 55-65). — Omitted is a blank space at f. 66.
Capp. pκ'-o' (f. 74-117) = pqeso5 (f. 66-102). — co-rent in cap. σα' (f. 117v) capp. σξζ', σξη' (f. 102v).
Chap. σß'-o' (f. 118-129) = set' tb' (C. 103-113). — In cap. σZ' (f. 129) two headings TY', TO' (f. 114) have been conflated.
Capp. σλn-Tκ' (f. 129-157) = TE'-FEC' (f. 114-145v). Capp. Tκα-TκG' (f. 157-158) in cod. 10, the folio having been cut away, are lost; cf. ibid. f. 145v.
Capp. τκζ'-τλδ' (f. 159r-162v) = τξζ'-τοδ' (f. 146r-148r).
After cap. τλd' (f. 163) one reads: Τέλος Τῶν κeqadaiwv τοῦ παρόντος βιβλίου.

10. Cod. Paris. 250€. Parchment, cm. 22 × 15, ff. 216, defective at the beginning, early 14th century, written by two hands (first hand ff. 1–144; second hand ff. 145–216); f. 149 was supplemented by a third scribe. Each page contains approximately 35 lines. From the library of Hurault de Boistaillé. Regius 3209. Cf. Omont, Inventaire, vol. II, p. 273. This most precious codex, sent to me at Ghent at my request by Henry Omont, was collated by me in the year 1899. – This codex contains an astrological miscellany, whose unknown author appears to have lived at the beginning of the 11th century (c. σιθ', τλε', cf. ο', ημε', τα) in Constantinople (c. κα', τκθ'). The later hand, who frequently rewrote faded titles, clumsily divided the disordered mass into poy' chapters, adding numbers in the margin.

Folia 1-24v (up to Γένεσις ἀτρόφου) contain excerpts from the work of Rhetorius; most are also found in cod. Venetus 7, f. 28-40, c. tr' and f. 100-115, c. φε-ριθ'; cf. Catal. VIII, 4, p. 116.

1 The beginning of the excerpts of Paulus Alexandrinus is found below on folios 177-183, which are to be transposed before this folio 149.

* This and the following chapters (chs. 389-391, perhaps also 392-384), like chs. 433 ff., where Indian authors are cited, are excerpts of a work translated from Arabic into Greek and divided into sections and discourses, fragments of which are found in cod. Rom. 15, f. 249 ff. Moreover, this chapter (389) is mentioned as the seventh of the ninth section in the index of the Vatican codex (Catal., V, 2, p. 16), but is not preserved in the text. From Rom. 15, f. 283 ff. the folios of cod. Rom. 11, f. 103 sB appear to have been copied.

1 Huetius intended to publish Οὐέττιον; cf. Origenis in Sacras Scripturas commentaria, which he published at Rouen in 1668, where in the Observationes (p. 54, col. 1) he cites certain words from the Anthologiae concerning lunatics (p. 112, 35-113, 10 ed. Kroll), adding: Vettius Valens, "if God willing, we shall one day bring forth from darkness into light." Likewise p. 108 repeats certain passages from chapter IV, 7, Περί χρόνων διαιρέσεως. — Cf. Cod. Paris. 116 (Catal. VII, 4, p. 89) from which we have seen that specimens of the Seldonian codex were sent to Huetius for the preparation of an edition.

Ex differentia litterarum atque atramenti formaque minore foliorum apparet Huetius primum ea quae in codice 12 traduntur descripsisse, deinde apographum suum ex Vaticano 191 (= Rom. 15) iam tunc, ut nunc est, mutilo supplevisse. Emendationes quasdam in marginibus addidit.

In folio B$^{v}$ praefixo signa astrologica cum eorum interpretatione manu Huetii.

Mutilum esse hunc codicem ex numeris quaternionum apparet; nec tamen plenior erat tempore Huetii, qui ea tantum quae hodie exstant ex eo descripsit (cf. supra). — Kroll (praef. p. x) coniecit hunc esse codicem ex quo Salmasius, " cuius liber de annis climactericis quasi commentarius perpetuus est Valentis, notitiam eius hauserat ".

From the difference in the letterforms and ink, and from the smaller size of the folios, it is apparent that Huetius first transcribed what is transmitted in codex 12, and then supplemented his apograph from Vaticanus 191 (= Rom. 15), already mutilated at that time as it is now. He added certain emendations in the margins.

On the prefixed folio B, astrological signs with their interpretations in the hand of Huetius.

**F. 1.** Λείπει ἡ ἀρχή. Οὐάλεντος Ἀντιοχέως ἀνθολογιών βιβλίον αο. It begins, as the Vatican codex, with Περὶ μεσουρανήματος (= 1, 6). It continues up to p. 32, 12 ed. Kroll, then passes to p. 53, 1-53, 4. Then, under the title Περὶ ἐτῶν καὶ μηνῶν, pp. 136, 26 - 140, 3 (καὶ τῶν ἀγαθῶν νοεῖσθω) are found, with the annotation λείπει πολλά.

F. 62. Book Five is completed. — Book Six. Prooemium. Book VI is preserved up to p. 256, 26 (loipaì hēméra) with the annotation "Some things appear to be missing." Immediately, at f. 72, Book VII is found, from p. 268, 4 (en hois pollà aitia) up to the end of this book.

F. 86. Book Eight. Preserved up to f. 297, 34 (tēn plánēn toû dedokótos (in the margin: ísōs dedukótos). The rest is missing.

**12. Suppl. Gr. 330 B.** — A paper codex of the 16th century, ff. 69 (ff. 1, 2, and 69 blank), 21 × 13 cm, like codex 11, likewise donated by Huet to the Jesuit professed house, as attested by the shield with inscription on f. 2, and likewise added to the Royal library in 1673. That this codex is mutilated is evident from the quire numbers; nor, however, was it more complete in Huet's time, since he transcribed from it only what exists today (cf. above). Kroll (praef. p. x) conjectured this to be the codex from which Salmasius, whose book on the climacteric years is virtually a continuous commentary on Valens, had drawn his knowledge of it.

13. Suppl. Gr. 1941. Paper; 14th century, cm. 24.5 × 18, ff. 47. Purchased from Minoides Mynas in the East. The order of the folios has been remarkably disrupted by the bookbinder who bound this volume. The folio numbers were added after the poor restoration of the book, yet in such a way that the number 16 was omitted and after 15 follows 17. The true order is as follows: 1–21, one folio missing, ff. 44–45, ff. 32–35, ff. 46–47, ff. 22–31, ff. 36–43. Gnawed by worms, it is disfigured by numerous lacunae. – The first part of this codex agrees in almost all respects with Roman 7 (ff. 108 ff.), which is either a copy of it or a twin derived from the same archetype.

Γ.17. 14. When does war occur (If the luminaries trine each other and the Ascendant aspects it, with Libra ascending it does not signify war). - Cod. 10, f. 111; Rom. 7, f. 126, cap. 14. 1.

18. 15. When does war occur — Otherwise on war in the index (Look at how many signs lie between the Ascendant and the Moon, and again how many between the Sun and the Ascendant, and add both numbers together, and after that many days or months the war occurs). = Cod. 3, f. 20; 10, f. 111; Rom. 7, f. 126, cap. 15.

16. Whether the army is large or small (Taking from the degree of the Moon to Mercury, and according to the quantity of the signs, say whether the multitude is fewer or more). = Cod. 3, ibid.; Rom. 7, f. 126v, cap. 16.

17. On deceit and ambush (When Saturn and the Moon [sic] bear witness to the Ascendant, say that treachery has occurred — Aries [sic] ascending makes those who go to war hot-headed, reckless, and bold). Cod. 3, ibid.; 10, f. 110v, cap. 286; Rom. 7, ibid., cap. 17.

Γ. 18. 18. On war (When they ask you about two armies, if they have moved — say that the opposing forces have moved from their position). Cod. 3, f. 20v; Rom. 7, ibid., cap. 18.

19. When they move (Look at the lords of the Ascendant — say the movement is slow with respect to their own displacement and configuration). Cod. 3, f. 20v; Rom. 7, ibid., cap. 19. 20. On besieged cities (Concerning besieged cities, one must observe [sic] in which sign the Moon happens to be and what it signifies as painful; in Pisces [sic] it signifies the siege and the war as incomplete). - Cod. 3, f. 21; 10, f. 109, cap. 283; Rom. 7, 127, cap. 20.

Γ. 19. Chapter 21. On the Besieging of a City (Let the Moon be waning and descending — because Mars [sic] signifies swiftness of action, ===Cod. 3, f. 21; 4, f. 123, cap. 24; and Saturn slowness). Rom. 7, f. 198, cap. 21.

3. Whether it draws near or is delayed. — Preserved in cod. Flor. 7, ibid.

4. On the practical place [1]

5. On matters arising from a question.

7. What each of the stars effects at a beginning.

The index ends. The text after chapter 22 (f. 19, above p. 119) continues without interruption:

Γ.19. Theophilus to Deucalion his son, greeting (It was enough, O child, the spiritual and [text breaks off at the bottom of fol. 21]). Edited Catal., V, 1, p. 234, 23 – 238, 13.

Γ.22. <On Jupiter> [Incipit f. 47] ...driving away all harm and adversity from men. But when passing through the middle of the zodiac sign it signifies a temperate and favorable winter; when stationary, it is harmful and useless in all things; when acronychal, dry and without rain. Cod. Rom. 7, f. 142. Cf. below ad. f. 34. Γ.23. On Mars (Mars making a transit into Aries brings about the accomplishment of affairs and swiftness of action — and the removal of the king and the ruin of [those hoped] for). Cod. Rom. 7, f. 146.

F. 25. On Venus (Venus entering the antecedent degrees of Aries signifies rain — stationing signifies rumor and dispute and fear). = Cod. Rom. 7, f. 149.

F. 27. <On Mercury> (Mercury entering the antecedent degrees of Aries is a cause of dry winds, but stationing and not, it is unfavorable to them). Cod. Rom. 7, f. 152; Vindob. 2, f. 56, chap. m'.

F. 29. Consider God. What each of the zodiac signs and stars signifies and what they govern (Aries governs meadows and all things in them). = Cod. 4, f. 46°, cap. ΛΓ'. Edited by Ludwich, Maximi et Ammonis reliquiae, 1877, p. 119. F. 29. Which kinds of things belong to each star (Saturn: onions, papyrus, and bulrush). Cod. 4, ibid. — Edited by Ludwig, ibid., p. 120

F. 29v. From the metallic substances (Saturn: lead, white earth, and the like). — Cf. ad cod. 4, ibid. Edited by Ludwich, ibid., p. 121. What each of the stars received by lot from the zodiac signs [read: living creatures]

1 That is, the tenth place (cf. Bouché-Leclercq, Astrol. Gr., p. 284). The chapters which Theophilus provided after the tenth place were already absent in the archetype when the index was compiled, which is silent about places XI and XII. They are partly preserved in cod. 10, f. 113 ff. What is found subsequently in this codex 13 appears from the preface to have been drawn from another book of Theophilus.

# DE LIBRIS ASTROLOGICIS TESTIMONIA NOVA

## Ex Pselli epistula.

Haec ex Pselli epistula a Paulo Tannery in editione operum Diophanti, t. II, p. 41, inserta, hic excerpere haud supervacaneum videtur, cum vix in illo libro mentionem astrologorum quaerere cuiquam in mentem venire possit.

Ὁπόσα δὲ τῷ Πετοσίρει πρὸς Νεχεψὼ πεφλυάρηται περὶ ζωῆς καὶ θανάτου [1], οὔ μοι ἔδοξε ταῖς ἐμαῖς ἐγκαταμῖξαι ἐπιστολαῖς, οὐδὲ εἰς ὑγιαίνουσαν ἐμβαλεῖν ἀκοήν· λῆρος γάρ, νὴ τὴν ἱεράν σου ψυχήν, τὸ ἐκείνου περὶ ὧν προείλετο συγγραμμάτιον. καὶ τὸ Πυθαγορικὸν δὲ πλινθίδιον [2] περί τε συμβιώσεων καὶ ἀπολωλότων καὶ ἠρρωστηκότων καὶ ἀποδημούντων οὐ κενόσπουδον μόνον, ἀλλὰ καὶ ἐψευσμένον παντάπασιν, κἂν οἱ πολλοὶ περιέπωσι ταῦτα καὶ δοκῶσι τιμὴν ἐντεῦθεν κομίζεσθαι τῷ πολλῷ τῶν ἀκροατῶν συρφετῷ.

## Libri Symonis Pharees astrologi.

Symonis Pharees [*Simon de Phares*], celeberrimi astrologi regis Caroli VIII, libri a Parisiensi Facultate theologiae anno 1493 examinati in censoriam notam incurrerunt; cf. iudicium eiusdem facultatis apud Duplessis d'Argentré, *Collectio iudiciorum de novis erroribus*, t. I, 1728, part. 2, p. 325 s., ad quem me delegavit doctissimus sacerdos Augustus Pelzer.

... Ut autem libri a nobis damnati facilius dinosci possint, suis eos titulis et capitibus designandos putavimus.

Damnavimus igitur in primis volumen quotatum XX in quo hi libri seu tractatus continentur. Primus incipit : *Cum tecum venissem et more solito sidereos aspicerem motus* etc. — Alter cuius titulus est : *In nomine Domini pii et misericordissimi.* Incipit prologus : *Viri*

# NEW TESTIMONIES ON ASTROLOGICAL BOOKS

## From the Epistle of Psellus.

It seems not superfluous to excerpt here from the epistle of Psellus, inserted by Paul Tannery in the edition of the works of Diophantus, vol. II, p. 41, since it could scarcely occur to anyone to look for a mention of astrologers in that book.

As for all the nonsense that Petosiris babbled to Nechepso about life and death, I did not think it fitting to mix into my own letters, nor to introduce it to sound ears; for it is rubbish, by your sacred soul, that little work of his on the subjects he chose to write about. And the Pythagorean tablet concerning cohabitations and the missing and the sick and those abroad is not only a waste of effort, but also thoroughly falsified, even if the many cherish these things and seem to derive honor from them before the great rabble of listeners.

## Books of Simon de Phares, astrologer.

The books of Simon de Phares [Simon de Phares], most celebrated astrologer of King Charles VIII, examined by the Paris Faculty of Theology in the year 1493, incurred a censorious judgment; cf. the verdict of the same faculty in Duplessis d'Argentré, Collectio iudiciorum de novis erroribus, vol. I, 1728, part 2, p. 325 f., to whom I was referred by the most learned priest Augustus Pelzer.

••• So that the books condemned by us may be more easily identified, we thought it proper to designate them by their titles and chapters.

We condemned therefore first and foremost the volume numbered XX in which these books or treatises are contained. The first begins: Cum tecum venissem et more solito sidereos aspicerem motus etc. - The other, whose title is: In nomine Domini pii et misericordissimi. Here begins the prologue: Viri

Damnavimus item viginti membranas quasdam sine ullo ordine sub sigillo quodam colligatas quotatasque 54. Quarum prima incipit: *Libra signum temperatum,* ultima : *Et occidit ultima die Iulii.* Et videntur transsumptae ex praecedenti volumine.

Item volumen quoddam manu scriptum quotatum L, in quo habetur liber archidivinatoris *Albumazari de magnis coniunctionibus* etc.

Item aliud volumen impressum, quotatum 11, in quo rursus ut in proximo habetur liber *Albumazari de magnis coniunctionibus, annorum revolutionibus ac eorum profectionibus* octo continens tractatus[1].

Item alius liber, cuius titulus est : *Incipit tractatus Albumazaris florum astrologiae.* Incipit autem : *Dicit Almazar* [leg. Albumazar] : *Oportet te primum scire* [2].

Item codices quosdam ex charta simul in quadam membrana ligatos. Primum folium incipit : *Par la figure astrologale faite ce jourd'huy 25e jour de Novembre.* Ultimum incipit : *Selon les docteurs se treuve à la part de Midi.*

Item alios quosdam etiam ex charta sub sigillo quodam ligatos, quotatos 64. Primi codicis oblongi primum folium incipit : *Dicit Albubater* [3]. Ultimum, *Secundum Ptolemaeum ascendit ibi extremitas caudae.*

the surname of Georgius Zothorus Zaparus... priest and philosopher, translated from the Persian language into Latin. The Book of Albumaza (sic). The second treatise begins: Since in diverse regions it has been established that sons in the end, etc. — The third is entitled in red: Here begins the book on the images of the veil, and the signs of the planets, etc. It begins in black: Philosophers of old learned through many experiments. — We have judged these treatises worthy of condemnation. Concerning the following items in the same book we have said nothing. Of these, the first title is in red: Treatise on the Quadrant. It begins in black: Geometry has two parts, theoretical and practical. Another treatise on the doctrine of the sphere, composed by Master Robert of England, begins: Since the science of astronomy deals with the nobler subject. After this follow certain tables. — Another title is in red: Experiments in Medicine. It begins in black: Many experiments are here set forth against various ailments.

We likewise condemned twenty certain parchment leaves bound together without any order under a certain seal and numbered 54. The first of which begins: Libra, a temperate sign; the last: And it sets on the last day of July. And they appear to have been copied from the preceding volume.

Item, a certain handwritten volume, catalogued as L, in which there is contained the book of the arch-diviner Albumazar on great conjunctions, etc.

Item, another printed volume, catalogued as 11, in which again, as in the preceding, there is contained the book of Albumazar on great conjunctions, containing eight tractates on the revolutions of years and their progressions.

Item, another book, whose title is: Here begins the treatise of Albumazar on the flowers of astrology. It begins: Almazar [read: Albumazar] says: You must first know.

Item, certain codices of paper bound together in a certain parchment cover. The first folio begins: Par la figure astrologale faite ce jourd'huy 25 jour de Novembre. The last begins: Selon les docteurs se treuve à la part de Midi.

Item, certain other codices also of paper, bound under a certain seal, catalogued as 64. The first folio of the first oblong codex begins: Dicit Albubatera. The last: According to Ptolemy, the tip of the tail ascends there.

Item, certain other codices of paper similarly bound together under a certain seal. The first folio begins: De prima domus haec etc. The last of the work: Malus esset et abhorrendus.

Item, another handwritten volume, numbered 36, in which there are two books. The first begins: In nomine Domini amen. Incipit quidam brevis tractatus. The other begins: Caeli enarrant gloriam Dei etc.

Item, another printed volume, numbered IX, in which the following books are contained. First, a book whose title is: Repertorium pronosticum de mutatione aeris. It begins: Cum in multis voluminibus sapientes antiqui. — The second, whose title is: Hippocratis libellus de medicorum astrologia incipit, translated into Latin by Peter of Abano. It begins: Cum legerem libros Hippocratis etc. — The third, whose title is: Incipit liber Abraham Iudaei de nativitatibus. And it begins thus: Dixit quoque Abraham Iudaeus optimum instrumentorum. These we have condemned. — There follows another whose title is: Magistralis compositio astrolabii Henrici Bate etc. It begins: Universorum entium radix et origo etc. This one we have not condemned. We exhort, however, all Christians not to apply the astrolabe to this most wicked art by using it to investigate lost things or other hidden future events. — There follows the Arithmetic of Boethius, which we commend and judge should be separated from these superstitious books and preserved.

Item another large handwritten volume marked IIII in which several books or treatises are contained: The first, after a certain figure, begins: Ego fui natus in tertio climate. — The second begins: Quia magnae prudentiae existit iudicium. — The third is headed: Sequitur de significationibus natorum. It begins however: Modo est videndum generaliter. — The fourth, which is called: Vade Mecum, is headed: Sequitur de indiciis planetarum in annis suis. It begins: Quia intentio mea non est nisi generaliter ponere. The fifth is headed: Sequitur de electionibus. It begins: Viso de primis duabus partibus. The sixth is headed: Sequuntur extraordinariae pronosticationes de mortalitate, seu epidemia, caristia et guerra. It begins: Quando in revolutione anni mundi etc. — The seventh is headed: Sequitur de tonitruis et significationibus earum. It begins: Notandum est circa materiam. — The eighth is headed: De planetis

# EXCERPTA EX CODICE 2 (Paris. 2229)

Quae hic eduntur ita consentiunt cum fragmentis quae ex codice recentiore Laurentiano XXVIII, 32 (saec. XV) edidit Heeger (*De Theophrasti qui fertur* περὶ σημείων libro, Lipsiae, 1889, p. 69 ss.), ut utraque ex ampliore forma horum ominum contracta esse appareant. Caput primum Περὶ τῆς ἐκ τῶν ζῴων σημασίας et epilogus (p. 139, v. 28 : Τὰ δὲ σημεῖα κ.τ.λ ) cum Laurentiano saepe ad verbum consentiunt, cetera longius ab eo recedunt. Fontes horum praesagiorum de tempestatibus optime indagavit Heeger, qui ea omnia ad librum peripateticum περὶ σημείων redire monstravit, caput autem primum ex *Geoponicis* et Aeliano conflatum esse. Quae singillatim hic adnotare supervacaneum visum est, cum hoc in dissertatione Lipsiensi iam effectum sit.

# EXCERPTS FROM CODEX 2 (PARIS. 2229)

What is edited here agrees so well with the fragments edited from a more recent Laurentian codex XXVIII, 32 (15th century) by Heeger (De Theophrasti qui fertur περὶ σημείων libro, Lipsiae, 1889, p. 69 ff.), that both appear to have been condensed from a fuller form of these omens. The first chapter Περὶ τῆς ἐκ τῶν ζῴων σημασίας and the epilogue (p. 139, l. 28: Τὰ δὲ σημεῖα κ.τ.λ.) very often agree word for word with the Laurentian, while the rest diverge more widely from it. The sources of these weather prognostications have been most thoroughly investigated by Heeger, who showed that they all go back to the Peripatetic book περὶ σημείων, while the first chapter was compiled from the Geoponica and Aelian. It seemed superfluous to note these things individually here, since this has already been accomplished in the Leipzig dissertation.

Γ. 22. On the significance derived from animals, as many as give advance signs of storms, fair weather, and the movements of winds.

Goats, whenever they approach the fold at a run, if while grazing briskly they keep looking back toward the folds, signify a storm.

Goats sleeping in a huddle indicate that a storm will arrive very shortly.

Lambs and kids leaping upon one another and jumping about signify a bright day.

Oxen, whenever it is about to rain, lie down on their right side; but if on the left side, the opposite.

When an ox bellows and sniffs the ground, rain is inevitable. 10

Oxen and also sheep eating more than necessary indicate winter.

Weasels and mice squeaking signify a severe winter.

Cranes flying from the open sea toward land indicate a severe winter; when they advance quietly, fair weather; but if they cry out and swoop down and are agitated, they signify a severe winter.

signs, these must be awaited until the full moon. Those that are foretold around the full moon, observe them up to the eighth day after the full moon. Those that occur from that point as the month wanes are fulfilled up to the third and fourth day. For in general most signs must be spoken of in this way: either on the same day, or on the coming day, or within the following two days. One should also examine the annual days and observe whether there is a rising or setting of stars on those days on which signs of some storm are also foretold; for wherever you find this, the storm is much more strongly foretold, unless some of the wandering stars, whether stationary, or making their appearances, or otherwise configured, alter the constitution of the air, so that it seems to some that the account of the signs has not been recorded with precision. For if someone examines their observation carefully as well, he will in every case marvel at the truth of what has been written. For to the extent that it is within human capacity, the observation recorded here has been set down with the greatest care.

# EXTRACTS FROM CODE 3 (PARIS. 2417)

## Selected chapters of Hephaestion of Thebes.

Until the complete work of Hephaestion is published, which I hope will be possible before long, I have decided to add here, to the chapters already made public by Charles Ruelle in the second part of the Parisian catalogue, several others drawn from his transcription of this codex 2417, in which the names or excerpts of ancient authors are transmitted. For these are of the greatest importance above all for understanding the history of astrology.

## Hephaestion of Thebes, Second Book.

It would next be fitting, most zealous of friends, Athanasius, now that the first and general matters have been set forth by us, to append also the individual branch of natal astrology, taking care here especially of both experience and brevity to the extent possible. For the many-faceted nature of the subject here to some degree compels us to make use of more material; and those things found thus among the ancients we set forth faithfully in their own words or also as worked out in verse; and those things which have come down to us through the continuous experience and observation of very many nativities we shall endeavor to add to this part; and another person, too, who is eager to learn and industrious, setting out from both the ancient treatises and these, might expand the art and discover very many truths for the foreknowledge of the things that befall the human race. We shall begin in sequence in the following order.

### I. On Conception and Birth. 15

of the Sun; for it is when the Sun is there that the conception took place; and in the case of seven-month births, in the diameter. Of the ten-month births themselves, some are brought to completion at the greatest birth after two hundred and eighty-eight days and 8 hours; others at the middle birth after two hundred and seventy-three days and 8 hours; and others at the least after 258 days and 8 hours. Of the seven-month births, those of the greatest birth are 245 days and 8 hours; those of the least are 176 days and 8 hours; and those of the middle are 181 days and 8 hours.

The ancient Egyptians of the school of Petosiris assert emphatically that wherever the Moon happens to be at the time of birth, that sign was the ascendant at conception; and wherever it happened to be at conception, that sign will be the ascendant at birth, or its diameter. But some also employ the following method, which does not agree with us very well: multiply, they say, the degrees already passed of the ascending sign at birth by the number of the hours; and cast out the resulting degrees thirty at a time from the ascendant, and wherever the number falls, that sign was the ascendant at the sowing of the seed. On the subject of the Moon, different people say different things. Antiochus of Athens says that this method too has a certain degree of truth. Observe, he says, on what day of the Moon someone was born, and to this number add one hundred and eighty, and continually subtract 29 from the natal month; and on whichever day the number ends, examine where the Moon was at that time; for the zodiac sign through which it was travelling is to be understood as the same one that had the Moon's passage at the time of conception. But this method does not agree for all cases. We have set it out for the sake of exercise and in order to find from many sources the same agreement.Antigonus, however, appears not to have carefully considered the precision required in these matters, and therefore rejects it entirely; of the methods set out above, the method of the ancient Egyptians agrees more than the others

ὅθεν κατ' αὐτοὺς ἐντέχνως σκέπτου τὸν τόπον τοῦτον οὕτως. ἐπειδὴ γὰρ εὑρέθη, ὡς προεῖπον, τῇ συνεχεῖ πείρᾳ τὸ ὡροσκοποῦν σημεῖον ἐν τῇ ἐκτέξει, τοῦτο τὴν Σελήνην ἐπέχον ἐν τῇ σπορᾷ, ὡς καὶ οἱ παρατηροῦντες τὸν καιρὸν τῆς σπορᾶς καὶ τὴν τότε μοῖραν τῆς Σελήνης τὴν αὐτὴν εὑρίσκουσιν ὡροσκοποῦσαν ἐν τῇ γεννήσει. διὰ τοῦτο ἀναγκαῖον τὸν ὡροσκόπον πρῶτον σκοπῆσαι ἤτοι ἐκ τῶν κανόνων ἢ καὶ μεθοδικῶς ἐκ τῆς προγενομένης συζυγίας τῆς ἐκτέξεως οὕτως· ἀρίθμει ἐπὶ μὲν συνόδου ἀπὸ Ἡλίου ἕως τῆς μοίρας τῆς Σελήνης καὶ τῶν γενομένων μοιρῶν τὸ δωδέκατον λαβών, ἀφαίρει εἰς τοὐπίσω ἀπὸ τῆς ἡλιακῆς, καὶ εἰς ἣν ἂν καταντήσῃ μοῖραν, ἐκείνη ἔγγιστα ἔσται ἡ τῆς προγενομένης συνόδου μοῖρα. εἰ δὲ εἴη ἡ προγενομένη συζυγία πανσέληνος, ὁμοίως ἀρίθμει ἀπὸ τῆς διαμέτρου μοίρας τῷ Ἡλίῳ ἕως τῆς Σελήνης, καὶ τὸ δωδεκατημόριον πάλιν λαβών, κούφισον ἀπὸ τῶν μοιρῶν τοῦ Ἡλίου· καὶ εἰς ἣν ἂν καταλήξῃ μοῖραν, ἐκείνη σύνεγγυς ἔσται ἡ διαμετροῦσα τὴν τῆς προγενομένης πανσελήνου μοῖραν. ἐγνωσμένης δὲ τῆς μοίρας τῆς προγενομένης συζυγίας, δήλη ἔσται καὶ ἡ ἡμέρα ἐν ᾗ γεγένηται <ἐκ> τοῦ πλήθους τῶν μεταξὺ μοιρῶν τῆς συζυγίας καὶ τοῦ γενεθλίου Ἡλίου κουφιζομένων ὀπίσω ἀπὸ τῆς γενεθλίου ἡμέρας, ἑκάστης μοίρας λογιζομένης μία ἡμέρα. τούτων οὕτω γνωσθέντων, ὁ ὡροσκόπος σύνεγγυς δῆλος ἔσται· τὰς γὰρ μεταξὺ μοίρας τῆς προγενομένης συζυγίας καὶ τοῦ γενεθλίου Ἡλίου λογίζου κατὰ τὸ ἑξῆς ἀπὸ τοῦ ζῳδίου ἐν ᾧ ἐστιν ὁ Ἥλιος πρὸς ἕκαστον ζῴδιον μίαν μοῖραν· καὶ εἰς ὃ ἂν καταλήξῃ, ἐκεῖνος ἔσται ὁ ὡροσκόπος. μεθοδικῶς ἐξακριβοῦται δὲ ἀπὸ τῆς γενεθλίου σεληνιακῆς μοίρας.

Therefore, following their method, examine this position skillfully in the following way. Since, as I said before, it was found by continuous experience that the ascending degree at the time of delivery is the degree occupied by the Moon at the time of conception, so that those who observe the moment of conception and the degree of the Moon at that time find the same degree rising at the birth. For this reason it is necessary to examine the Ascendant first, either from the tables or also methodically from the preceding syzygy of the delivery as follows: count, in the case of a conjunction, from the Sun to the degree of the Moon, and taking one-twelfth of the degrees obtained, subtract backward from the solar degree; and the degree at which you arrive will be approximately the degree of the preceding conjunction. But if the preceding syzygy was a full moon, likewise count from the degree opposite the Sun to the Moon, and again taking one-twelfth, subtract from the degrees of the Sun; and the degree at which you arrive will be approximately the degree diametrically opposite to the degree of the preceding full moon.Once the degree of the preceding syzygy is known, the day on which it occurred will also be clear from the number of degrees between the syzygy and the natal Sun, counted backward from the natal day, reckoning each degree as one day. With these things thus determined, the Ascendant will be approximately evident; for count the degrees between the preceding syzygy and the natal Sun in sequence from the zodiac sign in which the Sun is located, assigning one degree to each sign; and the sign at which you arrive will be the Ascendant, which is refined methodically from the natal degree of the Moon.

One must know that when the Moon is found at the time of birth upon the horoscope, they say the infant is of the middle gestation, that is, of 273 days and 8 hours. But if it is found in the signs following the horoscope, the gestation will be beyond the middle. And if it is found in the signs preceding the horoscope, then it will be fewer by 30 days than the middle gestation. If, therefore, the Moon is found in the signs following the horoscope, count from the degree of the horoscope to the Moon, and divide the resulting degrees by the mean daily course of the Moon, which is 13 degrees and ten minutes,

and divide the remaining hours of the day likewise by her hourly course, which is 33 minutes, and add the resulting days and hours to the days of the mean gestation, 273 days and 8 hours, and count back the resulting quantity from the birth date, and you will find the day of conception. But if the Moon is found in the aforementioned signs of the hour at the time of birth, do the reverse: count from the Moon to the degree of the horoscope, and divide the resulting degrees likewise by the mean daily course of the Moon and the hourly course, and subtract the resulting days and hours from the days of the mean gestation, 273 days and 8 hours, and subtract the remainder from the birth date, and you will find approximately the day and hour of conception. But in order to find it more precisely, calculate the Moon and the Sun for the day and hour of conception that has appeared; and if you find the natal Moon in the signs following the Sun of the conception, say that the conception took place during the day; but if you find the natal Moon in the signs preceding the Sun of the conception, understand that the conception took place at night.If then the conception is found to be during the day, count the degrees between the Sun of the conception and the natal Sun, and having learned in how many degrees they rise according to the proper climate, divide by the hourly times corresponding to the solar degree of that day, or the day on which the conception fell, and however many hours or fractions you find, say that this is the exact hour of the conception; and at that hour calculate the Moon precisely, and whatever degree it is in, that is the exact degree of the horoscope of the nativity. It is clear also that the ascending degree at the hour of conception will be the same as that of the natal Moon, as we said before; if therefore from the aforesaid the degree of the Moon of conception is found to agree with the degree of the horoscope, let us say that the hour of the nativity is given precisely; but if they differ

the degrees, and if the natal Moon is found to be of fewer degrees than the horoscope found at the given hour, it is clear that you subtract the difference from the horoscope; but if it is of more, you add, because one must always consider the degree of the horoscope to be the same as the natal Moon; but if the conception is found to have taken place at night, do the reverse, from the natal Moon up to the Sun of the conception, and proceed in the same manner as described above.

Which pregnancies are of nine months and which of seven months may be determined as follows: For every nativity, examining the day of conception as for nine-month births, in the manner we demonstrated above, and taking the preceding conjunction of that same day of conception and the degrees in between together with their third part, let us count from the preceding conjunction of the conception.And if the number of degrees falls beyond the day of the conjunction that occurred after the conception, we say the infant is of seven months; but if the number is found to be less, it is of nine months. Again, having determined the ascending sign and degree at the hour of the preceding conjunction of the conception, just as we learned for nine-month births, we form a right-angled triangle from this sign — namely, the ascending sign from the east toward the leading direction — having the hypotenuse as the first side of 150 degrees, after which the supine side of 20 degrees; and the remaining upright side of ninety degrees of the remaining degrees of the circle, to complete the 360 degrees of the Zodiac. After this, let us again similarly examine the ascending degree at the preceding conjunction of the birth day, and into which of the three sides it falls: if into the hypotenuse, we say the birth is of nine months; if into the supine side, of seven months; but if into the remaining upright side, we shall suspect that the creature born is irrational, or something abnormal, or also short-lived.They also examine the degrees of the two conjunctions — both that of the birth day and that of the conception — and if they find one conjunction on the hypotenuse side of the aforementioned triangle and the other on the supine side, they say the birth is of nine months; but if one is on the supine side and the other on the upright side, it is of seven months; and if one is on the hypotenuse and the other

another on the upright position signifies some irrational living creature, or even a strange one, or one short-lived.

By way of example, let someone have been born in the 77th year from the reign of Diocletian, Athyr 30, at the 6th hour in the third climate, at which hour we found the Sun at approximately the fourth degree of Sagittarius, the Moon at minute 47 of Capricorn, and the horoscope at the 25th degree of Aquarius. Since, therefore, the Moon was found in the following degrees of the horoscope, one must count from the horoscope up to the degree of the Moon, and we found 35 degrees and 47 minutes, which, comparing against the daily motion of the Moon, that is 13 degrees, we found 5 days; and the remaining 47 minutes, likewise comparing against the mean hourly course of the Moon, we found approximately one hour and a third. We therefore added the 5 days and one hour and a third to the days of the first delivery, 273 and a third, and the result was 278 days and nine and a third hours. Having counted these back from the birth day and hour, Athyr 30, hour 6, it reached Mechir 21 at the 27th, at the 8th hour of the night, subtracting also the quarter part of the intercalary day-and-night, 3 hours; it is found in the 21st year, Mechir 21 at the 27th, second hour, at which hour we found the Sun at degree*, and the Moon at degree*.

Once the moment of conception has been determined methodically or also by observation, it must be used for the examination of the bodily and also psychic characteristics based on the configuration of the stars at that time and the distribution of the surrounding atmosphere; and to the nativity itself one must pay attention as being of the greatest importance and itself being able to signify the same things, falling short of the inception at conception in this one respect alone, that through the latter also the things before

that it is possible to foreknow from the time of birth concerning the infant while still incomplete in the womb, whereas this concerns a man already fully formed; whence it would reasonably be called the former the genesis of human seed, and the latter that of man; for most things accrue to him at the time when he was in the womb. Examining, therefore, the beginning at the moment of emergence, from it we more accurately conjecture all the human events that fall under consideration, and here too through the same theoretical method and the characteristics pertaining to the time of sowing.

From CAP. II, 2. On the degree of the horoscope.

And Anubion in his elegies says the following:

You may learn the horoscope without the hour by observing
the Moon and the great Sun among other stars;
for a diurnal nativity, starting from the Sun, taking note
of the lord of the house where the god has taken his stand,
and from there counting the stars in order
up to the star of the Moon as it stands;
and cast out from the Sun this entire count,
and wherever it ends, there too is the horoscope.

But for a nocturnal nativity one must take the count of the Moon first,
examining the nocturnal hour of the theme;
But if the Sun holds few degrees of the stars,
one must observe the squares and diameters of places.

By examining the astrological configurations at the moment of inception, we shall know how each matter will turn out and what end it will meet. In this same way, for every nativity we examine the chart as an inception. It is therefore necessary to determine with precision the hour of inception for every undertaking, by means of the most carefully constructed horoscopic charts, and thus to set the angles as in a nativity — ascertaining the longitudes and latitudes of both the luminaries and the five planets, and how they stand in aspect both to one another and to the whole. From these considerations, let us then fit our prediction to each of the matters at hand.

## VII. — On Foundations, Buildings, and Establishments.

If someone wishes to found a prosperous and enduring city, and likewise to lay the foundations of temples, dwellings, and walls, let him observe the Moon transiting through the royal triangle at the appointed time and at the inception of the delineation or laying of the foundation, and well testified by all the planets. For when she so stands, it signifies that the foundation and its care and oversight will be undertaken by the greatest kings or rulers, and that it will be a dwelling of kings, beloved of the gods, distinguished, glorious, and long-lasting. But if any of the planets should be lacking in its proper testimony, the deficiency that will attend the city shall be discerned therefrom. For if Mars is in decline and averse at the inception, the city will be wanting in arms and will be weak in matters of war. If Venus likewise is unconnected, it will be devoid of grace, luxury, and refinement, and will not be beloved. And if the inception occurs without aspect from Jupiter, it will be easily harassed, partaking of no care or solicitude.And if Mercury is without configuration, there will be neither wisdom nor cultivation of learning within it. But if it should happen that Mars or Jupiter stands in opposition to the luminaries — that is, to the Sun and Moon — the city will also experience wars, and especially when the Moon arrives at the square, according to the relationship of the interval to

the rising hour, that is, the first degree of the zodiac. It happens that not all the inhabitants fall victim to death, plunder, and enslavement, because not all the structures of the city and its foundation received their inception at a single decisive moment. Just as in nativities the square aspect brings on the end of life, so at that time are the chronological periods customarily fulfilled and the founded city utterly destroyed — namely when all the malefic planets cast their rays more violently in square to the Moon; for in such a case the calamity is intensified through two concurrent modes: from the affliction of the square and from the stationary position of the Moon at its fixed point. The same effects may also be brought about when the 120 degrees of the ascensional arc are completed, or when another square is reached, or when the entire cycle is fulfilled. But if the squares happen to be unafflicted by the transit of the malefics, the city will endure into a second and even a third cycle, suffering the ill effects only in part.There is also another form of affliction: when the Moon happens to have undergone a subterranean eclipse, with the inception and foundation having occurred in the interval before the approaching conjunction, and the Moon during this time forming aspects to the malefics, or at the time of the full Moon — for in such a foundation it happens that destruction comes by earthquake, and cities founded under such conditions suffer harm more persistently. In the triangle of Aries, which is of a fiery nature, destruction comes from fire; in the triangle of Taurus, which is of an earthy nature, one must infer harms or benefits from the earth and agriculture, according to the bounds of the configurations; in the triangle of Gemini, which is of an airy nature, benefits or harms arise from the air; and in the triangle of Cancer, which is of a watery nature, benefits or harms arise from moisture.

Those who found cities and those who have undertaken the charge of construction shall partake of the dignity and character in accordance with the nature of the house-rulers (οἰκοδεσπόται).

Dorotheus advises in his verses concerning building as follows:

Whenever you complete the foundations and the works of construction,
let the Horned One be additive in her lights and in the longitudinal numbers,
entering also into her latitude,
where the northernmost brick of the zodiac belt lies,
with Jupiter or the Paphian testifying in aspect;
† or even when Phaenon is present to restrain her brilliance,
gazing, while Thouros stirs up the fierce flame around her.

Walls should be demolished when the Moon is descending from its northern height; stones should be raised from the foundations when she is in her lowest parts, that is, at the southern limit.

In temples, statues prepared in the appropriate form, and likewise in the appropriate material, should be installed — as the wise Egyptians and the other ancients have handed down — when the Moon is full and in its visible phase; for the powers of such statues, when consecrated in this way, are rendered more divine and ensouled through the cosmic motion. It is advantageous to construct and consecrate each of the sacred objects and statues when the Moon is in the triangle of Jupiter, and Jupiter is in harmony with her, that is, in the same triangle, and the Sun is similarly configured, and Saturn is likewise situated in its own triangle; and likewise for the remaining stars

one must construct the sacred temples and statues. Furthermore, it is auspicious to construct them while the planets are in their exaltations and domiciles, with none of the malefic stars in opposition; and one must consecrate Tyche when the Moon is in her own triplicity and that of Venus, and in Capricorn and Cancer it is favorable; the Mother of the Gods in Leo, Taurus, and Capricorn; in Virgo and Taurus, Demeter, Kore, and Plutus; Osiris in Pisces, Aquarius, and Taurus; Nike in Virgo and Cancer; Sarapis in Taurus, Leo, and Sagittarius; in Sagittarius and Pisces, Asclepius and Hygieia; in Virgo and Capricorn, Dionysus; in Gemini and Leo, Heracles; Eros and the Charites in the signs and exaltation of Venus; Nemesis in those of Saturn; and for the remaining gods one must likewise fashion the statues or images or reliefs on seals, and consecrate and renew each one accordingly, with the Moon in the aforementioned signs.

The various libations and prayers are interpreted as follows: the Ascendant represents the one who prays, the Descendant represents the offering he brings, the Midheaven represents the god, and the lower angle of the earth signifies whether the gods are receptive to the prayers, and concerning the matter for which one prays and inquires. 20

## VIII. — How One Must Administer Oaths.

Oaths pursue those who swear falsely: for if someone commits perjury when the Moon is in Scorpio, with Mars in conjunction with her and the Sun setting in opposition and in Libra — especially in matters of justice — perjurers are thus brought to punishment. In the remaining signs, when the Sun is setting, it is fitting to administer oaths; for those who swear falsely are punished in this way.

* I am uncertain whether vv. 27 ff. are corrupt, and whether one should read ὁρῶν τὸν Ἥλιον in place of ὁρῶντος τοῦ Ἡλίου; for it was commonly required that the one bound by oath should look directly at the sun. Cf. e.g. Anth. Pal., XIV, 72: "Station a man standing face to face, looking toward her own light | of the Sun." Aurel. Victor. 39, 13: "When (Diocletian), drawing his sword and looking toward the sun, was entreated..." Arrian., Bithyn., fr. 33 (F. H. G. 592): ἐδίκαζον καθεζόμενοι ἀντίοι τοῦ Ἡλίου. — Furthermore, I suspect that in v. 25, δύνοντος has been repeated from v. 24 in place of ἀνίοντος: cf. my dissertation il sole vindice dei delitti (Memorie della Pontif. Accad. Romana di archeologia, I, 1923, p. 68, n. 33; p. 69, n. 42). That Libra is the sign of justice is consistent with tradition; cf. Manil., IV, 209 ff.

## X. ☛ On Conjugal Union.

When the bridegroom is about to come together with his bride, let him be cheerful and in cheerful company, free from distress, and let him take care not to be excessively burdened with food and drink. He should guard against the Sun, the Moon, and the Lot falling in the 8th house or in the 2nd, which is diametrically opposite to it. He should also take care that the lord of the hour is unafflicted. Let the Lot be in the house of friendship, or in the house of children, or at the Midheaven, or in the house of the god — that is, let it be in the 9th. Let the Moon also be unafflicted and in harmony with the Ascendant. Mercury, when rising in the east and receiving testimony from Jupiter and Venus at the hour of conception, will make those born therefrom fortunate, well-educated, and blessed. The followers of Petosiris say that whichever sign the Moon occupies at the time of sowing, that sign will be rising at the time of birth; and whichever sign is transited at the time of birth, that same sign was rising at the time of sowing. Let this much be said concerning marriage and the matters pertaining to it.

## XXIII. — On Auspicious Hours and Dreams.

Concerning auspicious hours in every undertaking, and especially in matters of divination, one must observe the lord of the house of the god, taking care that it does not happen to be in an unfortunate or perilous condition, or in opposition to the Moon or to her own domicile lord. For when such configurations obtain, the oracular responses will be contradictory, false, and full of fear. And for those who inquire concerning inheritance or a deposit held in trust, the lord of the 9th place must be carefully watched lest it happen to be in opposition to the lord of the Lot, or to the Lot itself; for when so positioned, it indicates outcomes contrary to the matter of inquiry.

## XXIV. – On which days of the Moon dreams are true.

Concerning actions and those who pursue the future by hope, the outcome may prove favorable when the lord of the Lot of Fortune is found angular in its own sign and the luminaries are in good condition.

the lord being angular, found in its own sign, and the luminaries favorably placed. The ancient Egyptians observed the propitious days for dreams: the 1st day from the conjunction** is auspicious; the 2nd and 3rd are not suitable, for what is seen therein brings sorrow; on the 4th, 5th, and 6th, what is seen comes to pass; on the 7th, it comes to pass within four days; on the 8th, in time; on the 9th, the dreams are without outcome; on the 10th and 11th, within four days; likewise on the 12th and 13th, with favorable omen as well; the 14th is indicative of joy; the 15th is active but harmful; the 16th, 17th, 18th, and 19th bring to fulfillment what was seen within 30 days; the 20th and 21st are neutral; the 22nd fulfills its dreams immediately; the 23rd within 8 days; the 24th within 12 days; the 25th within 24 days; the 26th yields no fulfillment; the 27th will bring an outcome; the 28th and 29th within three days; the 30th yields no outcome.

## XXV. — On Petitioning for Favor.

Those who petition for favors must observe the Moon when she is in the Ascendant or in its trine; it is better when her domicile happens to be the sign in which she is located, applying to the lights and to the degrees, and configurated with Mercury, Jupiter, and Venus, and with those planets well-placed; let the testimony of the malefics be absent. It is also favorable, under the same configuration, to conduct petitions both by women and by men.

## XXXVII. — On Fugitives.

These are the verses of Dorotheus; but let there also be set forth what has been said by others, and from the Synagogai of Nicaean Protagoras. He says: if the lord of the Ascendant of the flight is found retrograde, the fugitive will return of his own accord to his master; but if it is found in its own domicile or terms and is not retrograde, the runaway is within the house, or in the city, or in the surrounding district.

Dorotheus wrote on fugitives in another book. Here we present the material of Nicaean Protagoras B. The paraphrase in prose of the verses of Dorotheus, which "were lost through the indolence of copyists" (cf. Kroll, Cat., VI, p. 113), was edited by Heeg, Cat. V. 3, p. 83. The brief fragment published by Oliviero, Studi italiani di filologia classica, VI, 1897, p. 27, does not appear to belong to Hephaestion. 29 Ταῦτα Smu24 οὗτος omitted in B. 24 Read οὕτως. 25 αὐτόματος B. 25–26 πρὸς τὸν δεσπότην omitted in all. 26 εὑρεθῇ omitted; καὶ omitted in B. 27 ἀποδράσας B; τῶν οἰκιῶν (ἐστίν omitted in B); ἐν (first occurrence) omitted in B; τῷ corrected to τῇ by second hand in P.

it will be found, and more quickly if it happens to be in the upper hemisphere above the earth, just as more slowly if it should be in the hemisphere below the earth; when the Moon is in the right square, that is, in the Midheaven, through the right parts of the house from which the fugitive fled, the fugitive has made his passage of escape; but in the left square, 5 likewise through the left parts; for the Ascendant is understood as the gates of the house.' When the Moon descends northward from the northern limit, it indicates that the fugitive has traveled toward the south and will be found within 25 days; descending southward, in the western regions within 42 days, in marshy and uncultivated or 10 stormy places; ascending from the south, in the eastern regions, and will be reported with difficulty within 64 days; ascending northward, in the northern regions, and indicates that he will be found with difficulty. And from the nature of the Zodiac signs one must conjecture the place to which the fugitive will go, for instance, Pisces signifies marshy and swampy places; likewise Aquarius 15 † Capricorn has been allotted terrain near the sea; Sagittarius rough places and vineyards; Aries pastoral and flat lands; Taurus level and cultivated places; Cancer watery, dry and high places; Leo steep, rough and desert places; Virgo grain-sowing lands; Libra flat plains; Scorpio rough 20 and brigand-infested places, having also vineyards; and Aquarius riverside and marshy places.

Some also assigned the angles as follows: the Descendant to the fugitive, the Midheaven to the master, the Ascendant to the stolen property, and the Imum Coeli to the one who encountered him. Some again assign them in this manner: the Moon and the horoscope to the fugitive; the Sun and the Midheaven to the master.

One must attend more carefully to the Moon, for she reveals all things; and first, as she traverses the hemisphere above the earth, she makes the discovery easy, but below the earth difficult, as ** also says. When the Moon is found in the Ascendant or in the signs that follow it, she indicates that the flight has been made toward the east; when in the Midheaven, toward the north; when in the Descendant, toward the west; when in the subterranean angle, toward the south.The angles also indicate the gate through which the fugitives depart and the length of the road — the interval of hours from the horizon or the setting point — through the Moon herself. For when she is found in tropical signs, she signifies that the route of flight is short, that the fugitive travels slowly and will not be far from the place from which he fled. If she is in terrestrial, oblique, or bicorporeal signs, she indicates that the journeys are not made in a straight line and that he has not fled alone. According to the risings or settings of the sign, one must determine both the directness and the crookedness of his course — beginnings from the risings and endings from the settings. The reverse signs of the zodiac also bring danger to the fugitive, especially when the malefic stars are present, indicating that their misfortunes will be more confirmed, and especially when Mars is beneath the earth together with the Moon or when he stations.When Saturn has dominion, they hang themselves or hurl themselves from a precipice. But when the Moon applies to the benefics or when the benefics hold the hour while the malefics form aspects, the fugitives return out of repentance. When the malefics are averse, they will be nearly at liberty. If Venus accompanies the Moon or is angular at the Ascendant or in her own domicile, they will not only be free from outrage but will even be entreated. When the Moon is found in the midst of

of the Moon, Mars, and Saturn, they shall be in bonds for a long time, and sometimes they die in prisons, especially when the benefics are alienated. When she applies to Mars, they shall be slaughtered. One must also guard the following. For when a star is present in the rising sign preceding the horoscope, it indicates that he has already fled before; but in the post-ascendant, having been caught, he will flee again; and when the Moon is in the horoscope of another house and not that of the Seeker, the fugitive will belong to someone else, yet he will be brought back. But if some star is setting, he will be found immediately and nearby the house; it is unfavorable for fugitives that the Moon be increasing in numbers; but when she is waning in numbers, 10 it is favorable. The Sun setting or culminating together with one of the malefics or being regarded by an active aspect, that is, by a square or opposition, before the recovery of the runaway signifies that the master will die or fall into many losses and damages. The Sun beholding the Moon in the hemisphere above the earth quickly brings about the denunciation 15 through those who are witnesses. Saturn likewise at the upper pivot together with the Moon signifies that the handover will quickly come about through a filthy woman or a slave girl, but by a freewoman will it be revealed.Venus likewise, being at the upper pivot together with the Moon bearing witness *** and if the horoscope is in quadrupedal signs, likewise the same 20 things are signified; but when she is culminating by herself, the fugitives are found sleeping. When Mercury is setting upon her, it must be known that he was persuaded by one of his neighbors or associates. When Venus and Jupiter or also the Sun is setting, the one who persuaded him will be a relative and will appear to be a free man. When Taurus, Gemini, Cancer, Leo, 25 Virgo, Scorpio, or Pisces are rising, with Jupiter and Venus beholding, it indicates beforehand that he will appear and be found in a sacred place; but when Mars is culminating together with the Moon, the fugitive will bear a cut on his face from

of iron; but if Saturn, Jupiter, and the Moon happen to be on the Ascendant, they indicate that silver has been carried off, and that the fugitive will be found. The benefics rising together with the Moon grant the fugitive freedom from anxiety after the property has been recovered, along with considerable wealth. When Mars and Saturn are setting together with the Moon, within 160 or even 170 days the fugitive will return to the authority of the master. Mercury rising or culminating together with the Moon and Venus indicates a child, a young girl, or a youth; this person will be found within about 50 days when the malefics are in decline. If Mercury and Mars are present, the person sought will be of middle age. If Saturn, Mercury, and Venus, the fugitives will be a man, a woman, and a son. If Saturn, Jupiter, Mercury, the Sun, and the Moon, the runaway will be a eunuch. When Mars, Venus, and Mercury are on the Ascendant, they indicate a hermaphrodite. Jupiter and Venus and the Sun indicate free runaways. When Mars aspects Jupiter, they indicate persons held under some authority and under guard. When Mars and Saturn are on the Ascendant, the fugitives will surrender themselves to certain authorities. Mars and Venus rising together indicate that great sums will be spent on licentious pleasures, and that it is for this reason the flight was chosen.

One must carefully analyze the configurations of the Moon, its applications and conjunctions, as we have previously stated, and observe in what region it was found from the angles — toward the east or west, and the rest. For from this it will be clearly evident not only concerning those who flee, but also those who undertake long journeys by land and sea. When the Moon falls in the signs near the western angle and is found in the signs declining from the Midheaven, the change of place is not local; but it is local when in the Ascendant and the Midheaven. For in most cases they are found wandering within the city and lodging with someone. But when the Moon is unconnected to both the Sun and the Ascendant at the time of flight, the fugitives are not found; whereas when she is in aspect, both in phase and at the

in agreement with the hour, indicates that the recovery will be made without any harm. But if the Moon is in the sign of conjunction, waning in light and not yet having run out from the rays of the Sun, and unconnected to the hour, it renders the flight irreversible; similarly also when it is undergoing an eclipse. In the bonds, however, it indicates that the fugitives will for the most part be in chains. One must also take into account the signs that hear and behold; for the Moon, when present and transiting in them, causes something to be heard or seen concerning them. And if nothing is lacking of the configurations previously described, they are caught within the first square; if something is very slightly lacking, within the second — that is, within the opposition of the inception; if something is again deficient, around the third square or even the complete restoration of the cycle. The Sun, being in square aspect, will provide their manifestation at the squares of the full moon; in trine at the trines of the syzygy; and in the case of inceptions indicating a slow recovery, one must define the intervals according to the motion of the Sun occurring in the trines.

The matters of flight are also derived in the nativities of slaves from the star of Mercury; for when it is badly placed, or beheld by the malefics, or has changed signs or also terms — most especially when in conjunction with Mars — and when this god is found in the western and subterranean center, even without the malefics it produces flights. Hence one must pay careful attention to its motion in relation to the Sun; for when it is under the rays, the one who has fled will immediately go into hiding; when it has fled the rays and risen, he will become visible; and when it has become additive, he will return. But if Mars is in the sign in which it makes its rising, and the fugitive has traveled with an evil person, he will be slaughtered; but if the benefics cast their gaze upon him, they save him from death, yet cast him into bonds and misfortunes.

One must observe the dodecatemories of the ruling stars; for when one falls together into the Ascendant, matters come easily to completion in every inception.

Some say that when the Moon is in conjunction with the Sun, the fugitive will be concealed for a time, and therefore such a person, if sought immediately, is found; but if not sought immediately, he becomes difficult to find. And so much, then, concerning flights, fugitives, and theft.

4 Ἡλίῳ hardly sound. One would expect a place or sign. 6 if corr. : if cod. be requested corr. : ζητηθείς cod.

# EXCERPTS FROM CODEX 4 (PARIS. 2419)

F. 1. An astronomical book, containing the judgments of astronomy, with the holy God; whose beginning concerns astronomy — who first discovered it, when God gave it to the world.

Seth brought the knowledge of astronomy through an angel of the Lord. Hence, having foreknown the things that were to come — floods by fire and water — he built two towers, one of stone and one of brick; in which he also recorded the knowledge of astronomy, so that if the flood came by fire, the brick one would survive, and if the flood came by water, the stone one would survive. And in the Old Testament it is said that the Ethiopian begat Nimrod the giant and hunter; and he was the first to discover magic and astronomy, and he was also the one who founded great Babylon.

## Vettii Valentis fragmentum novum.

Codicem Vaticanum 191 [= Astr. Rom. 15], quo solo maior pars Vettii Valentis Anthologiarum ad nostram pervenit aetatem, contextum non integrum sed mancum et mutilum praebere iam suspicatus est Guilelmus Kroll, cum primus abstrusum et involutum opus ederet (p. xi), et collatis aliis fontibus plurifariam probari potest (cf. e. g. *Cat.* VIII, 4, p. 117 quae de duodecim locis adnotavimus [1]). Itaque sperare possumus in syntagmatibus Byzantinis plura ingentis illius farraginis detegere excerpta quae in Vaticano omissa sunt. Fragmentum quod hic editur et in codicibus duobus, arcte sane inter se coniunctis, Valenti tribuitur, revera ad celeberrimum mathematicum pertinere certissimis indiciis probari potest. Nam dicendi forma semidocti scriptoris tam peculiaris est ut primo obtutu agnoscatur : sermo eius ex lingua communi verba petere solet quae apud scriptores doctiores raro vel nusquam inveniuntur (cf. *Cat.* V, 3, p. 151 s.) et in hoc capitulo recurrunt. Si indicem graecitatis huius libelli nostri cum indice editionis Krollianae contnleris, vocabula insolentiora plurima in utroque invenies. Nonnulla hic enumerare sufficiet : ἀγωνία, ἀηδία, ἀθέτησις (= *perturbatio*), αἱμαγμός, ἀκαταστασία, ἀλλοτρίωσις, ἀναστροφή, ἀνυστικός, ἀπαλλοτρίωσις, ἀποτελεστικός, ἀπραγία, ἀπρόκοπος, ἀχαριστία, βιωτικός, δειγματισμός, διακοπαί, εἰσοδιασμός (εἰσοδιάζειν), ἐκδημία, ἐξοδιασμός, ἐπίθεσις (= *impostura, fraus*), ἐπιθέτης, εὐφόσυνος, εὐχερῶς, κακοπάθεια, κινητικός, κρυβή, λῃστρικός, μετεωρισμός (= *vitae perturbatio*), ναυάγια, νωχελής, νωχελία, ὄχλησις, ὄχλοι, περιποιεῖν, πολυμέριμνος, σκυλμός, συμπώματα, συναρμογή (= *coniugium*), συνήθεια (*cum muliere*), σύστασις (= *cognitio*), ταραχώδης, ὑπερέχων (= *homo potens*), χειρισμός.

Sed et locutiones quas Valens adamabat interdum in hoc excerpto occurrunt :

## A new fragment of Vettius Valens.

Codex Vaticanus 191 [= Astr. Rom. 15], by which alone the greater part of Vettius Valens' Anthologiae has come down to our time, presents a text not complete but defective and mutilated — this was already suspected by Wilhelm Kroll when he first edited that obscure and convoluted work (p. x), and by comparing other sources it can be demonstrated in many ways (cf. e. g. Cat. VIII, 4, p. 117 where we have noted things concerning the twelve places), and we may thus hope to discover in Byzantine compilations further excerpts from that vast collection which are omitted in the Vatican manuscript. The fragment edited here, attributed to Valens in two closely related codices, can be shown by the most certain evidence to belong to that most celebrated mathematician. For the half-learned writer's peculiar style is such that his manner of speech is recognizable at first glance: he habitually draws words from the common tongue which are rarely or never found in more learned writers (cf. Cat. V, 3, p. 151 f.) and which recur in this chapter. If one compares the Greek word-index of this our booklet with the index of Kroll's edition, one will find a great many unusual words common to both.It will suffice to enumerate a few here: ἀγωνία, ἀηδία, ἀθέτησις (= perturbatio), αἱμαγμός, ἀκαταστασία, ἀλλοτρίωσις, ἀναστροφή, ἀνυστικός, ἀπαλλοτρίωσις, ἀποτελεστικός, ἀπραγία, ἀπρόκοπος, ἀχαριστία, βιωτικός, δειγματισμός, διακοπαί, εἰσοδιασμός (εἰσοδιάζειν), ἐκδημία, ἐξοδιασμός, ἐπίθεσις (= impostura, fraus), ἐπιθέτης, εὐφόσυνος, εὐχερώς, κακοπάθεια, κινητικός, κρυβή, ληστρικός, μετεω- ρισμός (= vitae perturbatio), ναυάγια, νωχελής, νωχελία, ὄχλησις, ὄχλοι, περι- ποιεῖν, πολυμέριμνος, σκυλμός, συμπώματα, συναρμογή (= coniugium), συνήθεια (cum muliere), σύστασις (= cognitio), ταραχώδης, ὑπερέχων (= homo potens), χειρισμός.

But the expressions that Valens was fond of also occasionally appear in this excerpt:

Gr. p. 164, 7: in bonds and bonds

P. 165, 6: πραγμάτων κατορθώσεις

P. 165, 8: ποιεῖ τὰς ἀναστροφὰς ἐνδό- τους

P. 166, 3: τελεῖ νόσους ἐπισφαλείς. Cf. 167, 11.

P. 209, 9 Kr.: ἐν δεσμοῖς ἢ συνοχῇ and 209, 22: ἐν συνοχαῖς ἢ εἱρκταῖς.

P. 41, 19: πράξεων κατορθώσεις. 191, 11; 241, 1: κατόρθωσιν πραγμάτων.

P. 355, 16: ἀναστροφάς κοσμίως.... ποιούμενος.

P. 96, 2: ἀποτελεῖ νόσους ἐπισφα- λεῖς.

1 The excerptor appears to have lived in the fifth century, which is the era of the older additions (p. 365 ff. Kr.).

His locutionibus, quibus multa alia addere possemus, collatis, neminem iam dubitaturum esse confido, quin revera ex *Anthologiis* haustum sit hoc capitulum, quamvis fortasse ab excerptore Byzantino decurtatum sit. De argumento, cf. fragmenta περὶ ἐπεμβάσεων Orphei et Anubionis in *Cat.* II, pp. 198 et 202 edita, quae tamen ab hoc omnino differunt, et ipsum Valentem, l. VI c. 4 (p. 261, 8).

Definitio obscura ἐπεμβάσεως invenitur in excerpto quod in codice Parisino capitulo Valentis adnectitur (cf. supra p. 25) :

F. 23ᵛ : Ἰστέον ὅτι ἐπέμβασις λέγεται ὅταν ἀπὸ τῶν ἀντιγενέσεων τὸ διάθεμα κατέχοντες τῆς γενέσεως ἀπὸ τοῦ ὡροσκόπου ἐξάγοντες τοὺς χρόνους καταντήσωμεν εἰς [ἃς cod.] τι ζῴδιον, καὶ λέγεται τότε ἐπέμβασις τοῦ ἀριθμοῦ [signo math.] ἐκείνου κατ' ἐκεῖνο τὸ ζῴδιον. — Cf. tamen Krollium in *Götting. gelehrten Anzeigen*, 1900, p. 911 [1].

Having compared these expressions — to which many others could be added — I am confident that no one will any longer doubt that this chapter was in fact drawn from the Anthologies, even if it may have been abridged by a Byzantine excerptor. Regarding the subject matter, cf. the fragments on ἐπεμβάσεις by Orpheus and Anubion edited in Cat. II, pp. 198 and 202, which nevertheless differ entirely from this chapter, and Valens himself, I. VI c. 4 (p. 261, 8). An obscure definition of ἐπεμβάσεως is found in an excerpt appended to the chapter of Valens in the Parisian codex (cf. above p. 25):

Γ. 23'. It should be known that "epembasis" (ἐπέμβασις) is said to occur when, taking the interval from the antinatals and counting the years from the horoscope of the nativity, we arrive at a certain sign — and it is then called the epembasis of that number in that sign. Cf. however Kroll in Göttinger gelehrten Anzeigen, 1900, p. 911 ([1]).

[F. 916.] By the most learned Valens, on the transits of the stars according to the thematic chart and the nativity.

On < of Saturn.

When Saturn enters the Ascendant, its beginnings are favorable — for it produces introductions, benefits, and acquisitions; but as it passes through the latter degrees it brings grief, harm, and dangers to those places. And if it comes to the Midheaven, it produces effects similar to those of the Ascendant, though milder in matters of harm; with respect to the actions of life it is slow and sluggish, yet active through force. In the Descendant it is turbulent and dangerous, for it causes losses, tears, dejection of the soul, damage through others, dangers from watery sources, and estrangement from one's own affairs. When it comes to be under the earth it produces the same effects, except that in this place it also brings dangerous illnesses and fears.

But if it comes to that of Jupiter, it produces false accusations, losses or

expenses belonging to others, harassment and attacks from those in superior positions. When it comes to the house of Mars, it produces bodily dangers, estrangements, losses of one's own property, seizures and despondency, enmities toward both intimates and strangers, lawsuits and attacks. But if Saturn returns to its own place, it is productive of useless journeys, and often casts one into "misfortune"; it is also productive of troubles and causes anxiety, and sometimes casts one into prisons and bonds, and sometimes brings about the deaths of parents and friends; moreover it is productive of expenses, instability in one's own affairs and those of others, betrayals by friends, despondency, disturbances, losses and disturbances through a woman, sorrows, ingratitude and public shaming by some, and the onset of fluxes. When it arrives at the house of Mercury, it brings about losses and sorrows from letters, affairs, disputes, partnerships, slaves, and children; it also brings harm from some, perjuries, despondency, and forfeitures. But if it arrives at the Sun, it produces untimely changes of place, the bringing on of dangers, losses, inactivity, and whatever it accomplishes it brings to pass with violence, and it brings on fluxes, eczemas, and dimness of the eyes. When it comes to the Moon, it produces losses through illnesses.It is also accustomed to cast down from a height and to raise up to a height, for this star, whatever benefits it has conferred in the nativity, takes them away again.

And concerning the nativity: 'If it comes to the square of the nativity, it renders affairs more easily resolved and brings administration of old matters, but foreign journeys without profit; if it comes to the trine, it manages affairs that pertain to action and loss with ease, but signifies unfavorable outcomes in matters of friends; if it comes to the opposition of the nativity, in all things there will be losses, plots of necessary associates, spiritual despondency, ingratitude, separations from one's own, betrayals by friends, enmities of necessary associates, and dangerous illness—

## On Jupiter.

Jupiter, upon entering the Ascendant, produces honors and glory, public recognition among crowds, acquisition of property, success in affairs, and children for the married, but loss of blood relatives. Upon reaching the Midheaven, it brings illustrious activities, success in affairs, changes for the better, income, and associations. Upon entering the Descendant sign, it brings grief, instability of life and body, and loss of children and close ones. But from the moment it passes beyond the sign of occultation, matters shift for the better. Upon entering the Subterranean angle, in the beginning it signifies the management of hidden, incomplete, or concluded affairs over a long period, and renders the soul sorrowful and full of anxiety.

Upon coming to Saturn, it brings unfavorable and harmful interruptions of affairs; for whatever is conducted during that period will turn out disadvantageous or costly. Upon coming to its own place, it will be unfavorable in all respects, except that it produces slanders and reproaches over trivial matters. Upon coming to Mars, the time will be wholly incompatible with prosperity and glory, and it brings all actions and undertakings to completion with despondency. Upon coming to Venus, it produces unions of the unmarried, marriages, and companionships, and for the married, children, though also gossip and sorrows, while the affairs of life become more reasonable and beneficial. Upon coming to Mercury, it brings profitable activities and beneficial movements from place to place, as well as receipts

and gifts and profitable partnerships; for it renders such transactions more favorable in such places. But when it comes to the Sun, it brings about dangerous illnesses, perils from waters and shipwrecks, and the onset of fluxes; it also produces unprofitable expenditures and sorrows in the affairs of daily life.

On the Nativity: When it comes to the nativity, it produces sluggishness of body and activity alike, yet brings marriages to the unmarried. It is also accustomed to grant children and to make additions to one's livelihood. When it comes to the trine of the nativity, it disturbs the beginnings, but in the end brings prosperity and success. When it comes to the square, it brings benefits in matters involving many persons; for it is economical and favorable for associations and renown. When it comes to the opposition, it grants benefits in matters of many kinds, as well as acquisitions and children to those already married; though in some cases it brings grief; for it chills and disturbs affairs and instills fears.

## On Mars.

Mars, when it comes to the Ascendant, brings renewals of affairs arising from bloodshed; for it disturbs life, and chiefly through women; it also produces fears and illnesses regarding women, and is evil in every respect. When it comes to the Midheaven, ** it is beneficial for amputations of extremities and dangers to the eyes; and it brings sudden dangers of falls, conflagrations, mobs, or four-footed beasts, yet it is not without use in administrative affairs and material benefits. When it comes to the Descendant, it is exceedingly disagreeable; for it disturbs both the household and one's livelihood, and it stirs up quarrels, plots, and terrors of the soul, especially through women, and for those already married it brings the critical periods of women. When it comes to the Subterranean Angle, it produces untimely expenditures, futile movements, and intrigues concerning hidden matters, and in all respects it is evil — for livelihood, affairs, and associations alike.

When it comes to Saturn, it is very active, cheerful, and beneficial to life in every respect; but when it comes to Jupiter, it is very turbulent, harmful, and apt to produce cowardice. When it is alone and unaspected, it is worse — disagreeable and prone to agitation; mark that star as being at that time exceedingly malefic in every way. When it comes to Venus, it connects with female persons and, on account of female matters, produces fruitless instabilities, condemnations, and pretenses of women, being altogether disruptive. When it comes to Mercury, it produces deceits and hidden affairs, fears and thefts, instability among friends, domestic ambushes, deprivations, and perjuries. When it comes to the Sun, it produces dangerous illnesses, changes of residence and removals, sudden journeys abroad, and from crowds, fire, and bloodshed ⟨and dangers from malefactors, and dangers of falling and from four-footed beasts⟩.

On the Nativity. But if it comes to the nativity, note the star in every respect. For it is sickly, harmful, ineffectual, and dangerous, bringing vain suspicions, anguish of soul, and instability among kinsfolk. But if it comes to the trine of the nativity, it is turbulent on account of trivial matters, and especially because of women; for it causes anxieties and untimely worries. If it comes to the square of the nativity, it causes quarrels with female persons, injuries to livelihood, and bodily afflictions. But if it comes to the opposition of the nativity, it is less malefic and harmful.

causes dangers from liquids and afflictions, or brings on flows of humors; yet in matters of practical affairs, it is productive. When it reaches Jupiter, it is disagreeable both toward the common people and toward those in high positions; and brings *** and slanders and reproaches, though the affairs of life proceed to completion. When it comes to Mars, it produces unpleasantness and acts of robbery, assaults by mobs, dangers, conflagrations, bloodshed and woundings, suffocations from critical periods, and especially sudden dangers from heights or from falls from four-footed beasts, and fears concerning household members, changes of residence, sudden journeys abroad, and dangers from oath-takings. When it arrives at Venus, for those who have wives it produces dangers concerning women and, on account of women, unpleasantness and reproaches; yet in the conduct of the affairs of life it is productive. When it reaches Mercury, it brings hidden matters to light and causes disturbance in the household and quarrels with domestic administrators; in practical affairs it is not without worth, though attended by sluggishness.

Concerning the Nativity. If it comes to the nativity, it is elevating and anxiety-producing, and moreover brings on illnesses; it manages the affairs of life as largely incomplete before departure. If it comes to the square of the nativity, it brings labors affecting the eyes and dangers from liquids; in practical affairs it is not without worth, though rather easily resolved. If it comes to the trine, it renders the period active and more easily resolved. Coming to the opposition, it is exceedingly disagreeable; for it unsettles and fills the soul with griefs, and brings blame, concealments, illnesses, and estrangement from household members.

## On Venus.

It is profitable in all undertakings, provided no other planet disturbs it by aspect; but when the star is at the Midheaven, it produces inactivity, exaltation of the soul, instability, and futile reproaches on account of women. adultery, and for those who are married, disturbances from women and miscarriages.
This star is exceedingly malefic in these places.
If it comes to the subterranean place, it produces the same effects as in the setting place.

Also concerning the nativity. If it comes to the nativity, it produces harassments and disturbances, grief from women, untimely expenditures, instability of women or bodily illness, blame from superiors, constrictions, and inactivity. If it comes to the square of the nativity, it produces cheerfulness and benefits at the outset, but afterward brings the native to a worse condition. If it comes to the trine of the nativity or to the returning year, it is favorable in all respects and beneficial, granting marriages or associations with women, and for those already married, the begetting of children.

Coming to Saturn, it produces inactivity, acquisitions, advancements, and profitable movements, yet accompanied by despondency; for often it brings benefits along with tears. When the star comes to Jupiter, it makes that period harmful, disagreeable, and turbulent, and especially brings about ambushes, plots, and slanders in relation to household members or on account of women. When the star comes to Mars, the period is quarrelsome and disturbing; for it produces untimely journeys abroad, vain expenditures, and attacks from women. Coming to its own place, it is in all respects joyful and easy to manage, effective for practical affairs of life and capable of accomplishing all undertakings. Coming to Mercury, it will be favorable and beneficial for all matters of life — for giving and receiving, transactions, partnerships, and business dealings — and it is favorable for all that one desires. Coming to the Sun, it will bring agitation of both livelihood and soul, instability toward relatives and friends, or bodily ailments; it also produces censures and fears. In general, the star is disturbing and harmful until it departs from these places.

## On Mercury.

Mercury, coming to the Ascendant, produces introductions, acquaintances, successes, good management, and the completion of old affairs. But if it ascends to the Midheaven, it likewise produces the completion of old affairs, sudden transactions, and conversations with those in authority. But if the star comes to the declining sign, it is exceedingly malefic and harmful; for it produces slanders, reproaches in daily life, vanities, and whisperings. And in every respect mark the time as evil. But if it comes to the subterranean sign, it produces gossip and † quarrels with unpleasantness arising from hidden or criminal matters, and inopportune departures on journeys abroad.

If it comes to Saturn, it produces benefits and introductions from old matters, gains and expenditures. When it arrives at Jupiter, it renders the period more cheerful and more joyful, and also provides introductions. When it comes to Mars, it is very malefic; for it produces mental and physical ailments, and moreover brings interruptions of affairs with haste, and distinctions accompanied by vexation, loss, and harm. When it comes to Venus, it is very cheerful and beneficial, successful and effective in matters concerning women. When it comes to its own place, it renders the period troublesome; for it produces enmities and estrangements from family members and household, and ambushes of friends, thefts, and attacks. When it comes to the Sun, it produces unpleasantness, anxieties, fears, ailments, and fruitless journeys abroad.

And concerning the nativity. When it comes to the natal position, it is distressing in every respect, both mentally and in practical life; for it produces disregards, reproaches, ingratitudes, and deprivations. If it comes to the square of the nativity, it is very distressing, especially from female persons, and it also produces fruitless expenditures. If it comes to the trine of the nativity, it is very beneficial, and particularly not unfavorable for undertaking matters related to ancient affairs. To the opposition of the nativity,

## Concerning the Moon.

If the Moon comes to the Ascendant on the first day, it agitates the soul; for it produces unpleasantness and vain fears. If it comes to the Midheaven, one will be active and effective in all things. If it comes to the Descendant, it produces fears and listlessness; be on guard also against a female person and every undertaking. Coming to the Subterranean angle, it is disagreeable and turbulent. Coming to Saturn, one becomes sluggish and listless, and it prompts certain recollections of old matters; take care in speaking to an elder, and all purchases are favorable; it is also advantageous to acquire houses; but dreams are disturbingly fearful. When it arrives at Jupiter, it is active for every undertaking, though burdensome. Coming to Mars, mark those days well; for it produces sudden mishaps, bouts of listlessness, falls, bloodshed, or upheavals, yet it is also incisive and energetic. Coming to Venus, it signifies cheerfulness and brings about transactions and social intercourse, though through female persons it may bring unpleasantness or public disgrace. Coming to Mercury, it renders affairs more fluid, especially those conducted through written correspondence or partnerships, though through domestic persons or servants it may bring entanglements or unpleasantness; mark those days carefully.

On the Nativity. In the nativity, it stirs up dangerous anxieties and creates displeasures and vain fears.

## Hermetis Trismegisti methodus mystica.

Duas recensiones huius opusculi repperimus, quarum altera in codice Parisino nostro 4 (= 2419), f. 69ᵛ, cap. ιϛ′ et in codice Veneto 6 [i. e. Marciano 334], f. 49, cap. ϛϛ′ servatur, altera in codice Florentino 8 (= Laur. XXXVIII, 14), f. 241. In parte priore, quam duobus columnis disposuimus, altera recensio ab altera multum differt. In parte reliqua similiores sunt, ita ut discrepantiae in apparatu critico adnotare satis fuerit.

Ad tempus huius opusculi definiendum terminum *ante quem* praebere videtur p. 176, v. 16, ἀνασταυρούμενον. Nam crucis supplicium Constantinum Magnum sustulisse notum est (Mommsen, *Strafrecht*, p 921). Multo antiquiora haec esse crediderim, quia nullum verbum e vulgari recentiorum Graecorum sermone petitum continent, nam vox inaudita, p. 176, 24, φαλσογράφον, aperte librarii error est pro πλαστογράφον, et ἀλογόμορφον, p. 173, 21, ab altera recensione abest.

Utrum haec " methodus mystica „, ex " Libro mysteriorum „ qui in Catalogo Apomasaris Hermae tribuitur (*Cat.* I, p. 84, 14; cf. *Realenc.*, s. v. *Hermes Trism.*, c. 799), an ex alio opere excerpta sit, incertum manet.

## The Mystical Method of Hermes Trismegistus.

We have found two recensions of this brief work, one of which is preserved in our Parisian codex 4 (= 2419), f. 69v, chapter 16, and in Venetian codex 6 [i.e. Marcianus 331], f. 49, chapter 98, and the other in Florentine codex 8 (= Laur. XXXVIII, 14), f. 241. In the first part, which we have arranged in two columns, the two recensions differ considerably from one another. In the remaining part they are more similar, so that it sufficed to note the discrepancies in the critical apparatus.

For defining the terminus ante quem of this little work, p. 176, l. 16, ἀνασταυρούμενον appears to provide evidence. For it is well known that Constantine the Great abolished the punishment of crucifixion (Mommsen, Strafrecht, p. 921). I would believe these texts to be considerably more ancient, since they contain no word borrowed from the common speech of later Greek, for the unheard-of word at p. 176, 24, φαλσογράφον, is manifestly a scribal error for πλαστογράφον, just as ἀλογόμορφον, p. 173, 21, is absent from the other recension.

Whether this mystical method was excerpted from the "Book of Mysteries," which in the Catalogue is attributed to Hermes under the name of Apomasar (Cat. I, p. 54, 14; cf. Realenc., s. v. Hermes Trism., c. 799), or from another work, remains uncertain.

whether it is human or bestial, male or female, twins or four-footed or winged, whether it survives or is born prematurely, and whether, once born, it will be nourished or will fail to thrive; and concerning certain other diverse inceptions: this is the method.

of human form, and male or female, whether twins or winged or four-footed, and whether it survives or perishes, and whether the one to be born will be nourished or will remain without nourishment, or also concerning certain other diverse inceptions — this method is to be employed, which proceeds as follows:

Always take the degrees from the Sun to the Moon, and always take the degrees from the Sun to the Moon, and divide these by 6, and distribute these by 6, and discard as many hexads as you find, and release as many hexads as you find. The degrees remaining below the full count of degrees, release them from the zodiac sign in which the Moon is located, assigning one degree per sign, and into whichever zodiac sign the number terminates, observe that sign; and if it is of human form and observe that zodiac sign; and if it is of human form and benefic planets bear witness to it, say that the benefic planets testify to it, declare that the conception is that of a human. If it falls in a four-footed sign, and the creature to be born will be fully of human form; but if malefic planets aspect it, declare that the conception is that of a four-footed creature; but if benefic planets cast their gaze upon this sign, apart from the malefic planets, it is a human of ill fortune; but if it falls in a human-form sign with malefic planets present or testifying against it, it will be a tame four-footed creature; but if in four-footed signs both benefics and malefics together testify, likewise the creatures will be manageable and docile.

of the sign is of irrational form, and it is also testified by malefics, this indicates that the native will be of bestial form; but if it is testified by benefics, it indicates that the person will be unfortunate.

But if it falls in a four-footed sign, with benefics present or angular, the person will be one who is estranged from his own kindred; nevertheless, he will be held in honor. And if the angles are also co-configured with the angles, he will even be raised to royal power.

If you wish to know whether the native will be long-lived or short-lived, you shall determine this by the following method: if you find that the sign in which the number I previously described terminates is in a declining place from the Ascendant and in the terms of a malefic, declare the native to be short-lived. He will live the ascensional times of that sign for the clime in which you dwell; and if malefics testify to such a sign, each of them subtracts one-third and a half of the ascensional times of the sign; but if benefics testify, each of them in turn adds one-third and a half of the ascensional times; and if it falls in the sign or term of a benefic, the native will be long-lived.

You will know the years of these as well by using the same method; for whatever sign the number ended in, take the ascensional times of each sign in the climate in which the question occurs, and likewise the ascensional times of the following 2 signs in sequence, and declare that the subject will live for that many years, months, and days, observing the testimony of the malefics from square and opposition, and thus subtract one third and one half for the consideration of each, and if benefics are in aspect, let each add 9 years; but if the place falls in a declining house and malefics behold the two squares of the Moon, such intercalary periods result. When a benefic is in a succedent house, the newborn is nourished and reaches

serves as a slave; but if two benefics, it tends toward union and procreation; if a malefic is in anaphorical position, the embryo will be born dead; if there are two malefics, it will be dismembered in the womb or aborted. Twins and triplets occur when the approach falls in bicorporeal signs, or in prolific signs; and if the sign is also highly generative, more than three are often born. And if malefics are also in anaphorical position in such cases, the offspring are born dead, but if benefics, they are born alive; and if again the stars of the diurnal sect bear witness to the indicated approach, the child in the womb is male, or the children are male; but if those of the contrary sect, female or females; if one is masculinized and the other feminized, male and female; but if the place is intercepted by malefics, there is no child in the womb.

In other inceptions, if the approach is witnessed by benefics, declare the inception auspicious and every such undertaking likewise; but if by malefics, declare both the inception and the undertakings unfavorable — for it signifies either illness, or condemnation, or things similar to these. Moreover, the conduct of each of those who inquire is also discerned, whether it be base or worthy, through this method of approach: when you find this sign cadent, yet witnessed by benefics with no malefics present, declare the inquirer to be inquisitive and meddlesome; and if witnessed by Jupiter, to be an intelligent investigator of discourses, letters, poetry, and philosophy; but if Jupiter happens also to be in the house of Mars

Mercury with the Moon indicates a man of royal standing. If the Moon, squaring Mercury, is testified by a benefic — even if it is in the terms of a malefic — it still signifies a great man. Mercury positioned in the succedent of the place of entry indicates a craftsman, a manual laborer; but if in the terms of Mars, it signifies one who works with fire or iron; if in the terms of Saturn, one who is concerned with theft or with moist substances; but when benefics are squaring, it signifies one who is supreme master of his craft yet acquires nothing.

Apomasaris on the Effects of the Moon.[1]

## F. 138. 54. On the Fact That the Moon Participates with the Sun in Generations and Destructions.

Let us speak of the Moon: she too has the greatest influence upon the world of generation and corruption. For they call her the plectrum of the heavenly bodies, as she transmits their influence. She exerts her power over the waters and the seas, over living creatures and plants, over the health of bodies and diseases, and moreover over the critical days of illnesses, and especially over the tides of the seas. For when the Moon waxes, the sea rises with her, and when she wanes, it subsides. And again, something wondrous occurs in the Ocean, and likewise in many seas: the Persian Sea, the Sea of India, the Sea of China, the sea of the islands lying near them, and the sea to the western parts of Constantinople — when the Moon rises, the sea swells until she reaches the midheaven. But from the moment she begins to decline from the midheaven until she sets, the sea recedes so much that the ships lying upon it are found upon dry land. When she descends from the setting toward the subterranean point, the sea swells... When she rises again from the subterranean point toward the horoscope, it contracts. Thus when the sea swells, violent winds and waves arise upon it, and from them...

From these signs the inhabitants judge the increase of those things; but when she is about to wane, the winds cease and the waves subside. Men observe these effects clearly along the shorelines, but in the open seas her waxings and wanings cannot be discerned.

## 55. On the Activities of the Moon.

We have previously stated the activity that the Moon exhibits with regard to the tides of the seas, and that when she is waxing in light, the tide is great, and when she is waning in light, it is small. We also observe her activity upon bodies and upon living creatures; for when she is waxing in light, bodies become stronger, warmer, and more moist, and their growth becomes manifest; but when she is waning in light, they become weaker. And when she is waxing in light, the humors flow outward, but when she is waning in light, they are contracted inward. Moreover, through illnesses* we observe the activity of the Moon clearly; for those who fall ill while the Moon is waxing in light, their bodies being strong, repel their diseases with vigor; but when she is waning in light, the bodies are weak and feebly resist the diseases. Through the Moon we also know the critical days; for when she forms a trine with her own position, which she held at the onset of the illness, or a sextile, or a square, or an opposition, we then call those her critical days. She also exerts an influence upon the hair of living creatures; for when she is waxing in light, the hair grows vigorously, becomes thick, and multiplies; but when she is waning in light, it diminishes and becomes thin. We observe also the following; for when

if one sits for a long time or sleeps out in the night air, his body becomes relaxed, or he is frequently afflicted with rheumatic ailments, or headache comes upon him; moreover, when meats are placed under the light of the Moon, they are altered in smell and taste. The Moon also exerts its influence upon milk and eggs: for when the Moon is waxing in light, milk increases in the breasts; likewise the marrow of animals: when the Moon waxes in light it increases, and when it wanes in light it diminishes. Similarly with the white of the egg: those eggs that are produced while the Moon is waxing in light have an abundance of white, while those produced while it is waning have little of it. The Moon also exerts its influence within the course of a single day and night: for when the Moon is in the eastern quarter, the milk in the udders of sheep increases, as do the marrow and the white of the egg; and if one were to observe these things carefully, he would find them to be clearly evident. We also observe that fish of the sea, of lakes, and of rivers, when the Moon is waxing in light, come forth from their own lairs and spread out across the sea, growing fat and sleek; but when it wanes in light, they retire into their own retreats and descend to the lower depths of the waters, and do not grow fat.And this very thing can be observed in the course of a single day and night: for when the Moon rises from the horizon up to the midheaven, fish spread out; but when it declines from the midheaven, they contract. Moreover, reptiles themselves, when the Moon is waxing, come forth from their own lairs and retreats and spread out, but when it is waning, they contract. And venomous creatures too bite more fiercely when the Moon is waxing in light, but feebly when it is waning. Lions seek to seize prey more when the Moon is waxing than when it is waning. ## De coniunctionibus et defluxionibus Lunae.

Excerptis de lunae virtutibus ex Apomasare haustis subiungere visum est caput Περὶ συναφῶν καὶ ἀπορροιῶν τῆς Σελήνης, quod in eodem codice Angelico, f. 145, invenitur. — In collectaneis suis Palchus inseruit hoc caput, quod ex opere Astrologi anonymi anni 379, sicut ea quae antecedunt, eum fortasse descripsisse iam monuimus *Cat.* V, 1, p. 194, 212. Idem ex eodem astrologo repetiisse videtur Rhetorius quoque; cf. cap. κβ' codicis nostri 10, f. 227, infra editum : Τὰ ἀποτελέσματα τῶν συναφῶν καὶ ἀπορροιῶν, καθὼς διδάξω μετὰ ταῦτα, sed haec inter excerpta Rhetorii hodie servata desunt. Scriptor huius fragmenti certe deorum cultor fuit, quippe qui θεραπείας ἀπὸ θεῶν aegrotis promittit (p. 184, 28), sicut astrologus a. 379, *Cat.* V, 1, p. 210, et de μύσταις ἀποκρύφων loquitur, sicut Hermes Trismegistus et Valens (infra ad p. 184, 13). Totus sermonis color doctrinam quae hic profertur ex antiquis fontibus haustam esse prodere videtur, fortasse ex Hermete vel Petosiride.

Plane diversa sunt quae Περὶ τῶν συναφῶν τῆς Σελήνης praebet Antiochus, *Cat.* VII, p. 107 ss., nec non quae Περὶ τῶν συναφῶν καὶ ἀπορροιῶν τῆς Σελήνης docet Theophilus (cod. 13, f. 41). Differunt ea quoque quae Firmicus Maternus, IV, 2 ss. ex auctore Aegyptiaco (Petosiride?) latine vertit.

When the Moon is at the midheaven and waxing, they grow vigorously and multiply and bear fruit; but when the Moon is waning and declining from the midheaven, they become dormant and often wither. Moreover, linens and fabrics, if laid out at night in accordance with the Moon's corresponding phases, become easily damaged and are often torn. The Moon also exerts its influence over fruits, aromatic plants, and vegetables; for when it is waxing in light, they grow abundantly, and when it is waning in light, their growth is diminished — and farmers perceive this plainly. For they observe how vegetables, peaches, apricots, melons, cucumbers, watermelons, and gourds grow abundantly as the Moon increases, and grow sparingly as it decreases. Likewise, ores and minerals increase and grow lustrous as the Moon waxes, and diminish as it wanes — most notably the pearl and precious stones.

On the Conjunctions and Separations of the Moon.

It seemed fitting to append, after the excerpts drawn from Apomasar on the powers of the Moon, the chapter Περὶ συναφῶν καὶ ἀπορροιῶν τῆς Σελήνης, which is found in the same Codex Angelicus, f. 145. PALCHUS included this chapter in his collections, having perhaps transcribed it from the work of THE ANONYMOUS ASTROLOGER OF THE YEAR 379, just as he did with the preceding material, as we have already noted at Cal. V, 1, p. 194, 212. Rhetorius likewise appears to have drawn from the same astrologer; cf. chapter κβ' of our codex 10, f. 227, edited below: Τὰ ἀποτελέσματα τῶν συναφῶν καὶ ἀπορροιών, καθώς διδάξω μετὰ ταῦτα, but these passages are absent from the excerpts of Rhetorius preserved today. The author of this fragment was certainly a worshipper of the gods, since he promises θεραπείας ἀπὸ θεῶν to the sick (p. 184, 28), just as the astrologer of the year 379 does, Cat. V, 1, p. 210, and he speaks of μύσταις ἀποκρύφων, as do Hermes Trismegistus and Valens (below at p. 184, 13). The overall character of the discourse seems to indicate that the doctrine presented here was drawn from ancient sources, perhaps from Hermes or Petosiris.

Quite different is what Antiochus offers Περὶ τῶν συναφῶν τῆς Σελήνης, Cal. VII, p. 107 ff., as well as what Theophilus teaches Περὶ τῶν συναφῶν καὶ ἀπορροιῶν τῆς Σελήνης (cod. 13, f. 41). What Firmicus Maternus, IV, 2 ff., rendered into Latin from an Egyptian source (Petosiris?) also differs.

## Περὶ συναφῶν καὶ ἀπορροιῶν τῆς Σελήνης πρὸς τοὺς ἀστέρας, ὅσα ἐν τοῖς γενεθλίοις σημαίνει.

Κενοδρομοῦσα ἡ Σελήνη καὶ ἀκαταμαρτύρητος παρὰ τῶν ἀγαθοποιῶν, μετρίους, φιλερήμους ποιήσει, ἔτι δὲ μᾶλλον ἀφαιρετικὴ οὖσα οὐ μόνον μετρίους ἀλλὰ καὶ πτωματικοὺς ποιήσει· χεῖρον δὲ καὶ ἐὰν ὑπὸ δύσιν τύχωσιν ἢ ἀποκλίναντες. πρὸς δὲ τὰς φύσεις τῶν ζῳδίων τά συμβαίνοντα ἔσται.

Σελήνη Κρόνῳ συνάπτουσα, ἀνατολικὴ μὲν ὑπάρχουσα πρὸς βίον ἀγαθή· ὀφθαλμοὺς δὲ ἀδικεῖ καὶ στραβοὺς ἢ μύωπας ἢ γλαυκοὺς ἀποτελεῖ· πάντως δὲ σῖνος ἐν ὀφθαλμοῖς ποιήσει ἢ τὴν ὄψιν <ἀμαυρώσει>. καὶ τοὺς μὲν γεννηθέντας ποιεῖ συνετούς, ἀπροσκόπους δὲ περὶ τὰς πράξεις καὶ δειλούς· τῇ δὲ μητρὶ ψύξεις καὶ νόσους ποιεῖ. εἰ δὲ λειψίφωτος τύχῃ ἡ Σελήνη, ἔτι πλέον τὸ κακὸν ποιήσει καὶ τῇ μητρὶ καὶ τῷ τεχθησομένῳ· ἐὰν δὲ ἐκτὸς τῶν κέντρων Κρόνος τυγχάνῃ καὶ ὑπὸ τὰς τοῦ Ἡλίου αὐγάς, πολλῶν κακῶν αἴτιος ἔσται· νόσους γὰρ ἀπὸ ὑγρῶν ἢ ὀχλήσεις ἐπάγει. — Σελήνη Κρόνου ἀπορρέουσα σημαίνει τινὰ πρὸ αὐτοῦ γεγονέναι ἄχρηστον, ὡς αὐτὸν πρωτότοκον τοῦ οἴκου νομίζεσθαι· ποιεῖ δὲ σωμάτων ψῦξιν καὶ σῖνος καὶ νεύρων κακώσεις καὶ ὑγρῶν ὀχλήσεις. ἀφαιροῦσα δὲ τῷ φωτὶ ποιεῖ ψυχροκοιλίους, φλεγματώδεις, κατίσχνους, ἀσθενεῖς, ἀπὸ ὑγρῶν ἐνοχλουμένους, συντηκτικούς, ἀποστήματα, διαστήματα, πυρώματα ἔχοντας, μικροῖς χρόνοις † συνερικομους.

Σελήνη Διὶ συνάπτουσα ἐπὶ καλῷ τόπῳ ἐστῶτι εὐθανασίαν τῇ μητρὶ καὶ αὐτῷ εὐκλείαν παρέχει ἀγαθῶν· εἰ δὲ ὕπαυγος ὁ Ζεὺς ἢ ἐν κεντρικῷ τόπῳ, τῇ μὲν μητρὶ ἔκπτωσιν ποιεῖ, τῷ δὲ γεννηθέντι λεῖψιν ἀγαθῶν. — Εἰ δὲ τὴν ἀπόρροιαν ἀπὸ Διὸς ποιεῖται, θάνατον οἰκείων ἢ συγγενῶν ὄψεται καὶ δάκρυα ἕξει· καὶ τὸν οἶκον ἔρημον καὶ τὸν γάμον ἄστατον καὶ θάνατον γυναικὸς ποιήσει.

Σελήνη συνάπτουσα Ἄρει λείπουσα ποιεῖ τῷ τεχθέντι ἔκπτωσιν τῶν γονικῶν καὶ τῇ μητρὶ σῖνος ἢ πάθος ἢ τελευτήν· αὐτοὺς δὲ ποιήσει ὀξεῖς, τολμηρούς, θρασεῖς, βιαίους, ὠμοὺς· καὶ τὰς πράξεις μετὰ ἀπονοίας ποιουμένους· εἰ δὲ λείπουσα, τῷ Ἄρει συνάπτουσα, ἐν ἀγαθοῖς τοποῖς ὄντος τοῦ Ἄρεως, πρακτικοὺς τοὺς τοιούτους ποιεῖ καὶ

## On the Conjunctions and Separations of the Moon with the Stars, and What They Signify in Nativities.

When the Moon is void of course and unwitnessed by the benefics, it produces persons of moderate means and fond of solitude; and when in addition it is decreasing in light, it produces not only persons of moderate means but also those prone to downfall. The condition is worse still if they happen to be under the horizon or in declining houses. The resulting effects will accord with the natures of the zodiacal signs.

The Moon applying to Saturn, when she is oriental, is favorable for livelihood; however, she harms the eyes and produces persons who are cross-eyed, myopic, or glaucous — in any case she will cause some defect in the eyes or will dim the vision. She makes those born under this configuration intelligent, yet careless in their actions and timid; she brings chills and illnesses to the mother. If the Moon happens to be waning in light, the harm will be even greater, both to the mother and to the native. If Saturn is found outside the angles and under the rays of the Sun, he will be the cause of many evils, for he brings diseases arising from moisture or other disturbances. — The Moon separating from Saturn signifies that someone born before the native was of no account, so that the native is considered the firstborn of the household; it produces chilling of the body, physical defects, afflictions of the sinews, and disturbances from moisture. Decreasing in light, it produces persons of cold belly, phlegmatic, emaciated, weak, troubled by moisture, consumptive, subject to abscesses, swellings, and burning fevers, and in brief periods of time † wasting away.

When the Moon applies to Jupiter while Jupiter stands in a favorable place, it grants the mother a blessed death and the native himself an abundance of good things; but if Jupiter is under the rays or in an angular place, it brings the mother a downfall and the native a lack of good things. — If, however, the Moon makes its separation from Jupiter, he will witness the death of household members or relatives and will shed tears; and it will render his home desolate, his marriage unstable, and will bring about the death of his wife.

When the Moon applies to Mars while in separation, it causes the native to lose his paternal inheritance, and brings upon the mother injury, suffering, or death; and it will make the natives themselves sharp, bold, audacious, violent, and cruel, conducting their affairs with recklessness; but if in separation the Moon applies to Mars while Mars occupies favorable places, it renders such persons energetic and

impetuous and tireless. But if the Moon happens to be full, she makes the misfortunes worse both for the native himself and for his mother; for she brings about cuttings or burnings or violent dangers. If, however, the Moon happens to be waxing in light, while Mars diminishes by the numbers, the indication is grievous and the cause of many evils; for it brings diseases and downfalls, and moreover orphanhood. — If the Moon happens to be making her separation from Mars, it is evil in all respects; it produces dimness of sight, surrounds the native with many evils, and in the end darkens the vision; it also produces an irascible and wrathful temperament and causes derangement of the mind. If, moreover, the Moon diminishes Mars in light or also in numbers, it causes disturbances arising from black bile, risings of blood, afflictions from daemons, hemorrhoids, cutting, and separations; and in the case of women, embryotomies and danger to the womb. If Saturn also bears witness, while she is separating from Mars with diminution of light, hidden sufferings and injuries occur about the secret parts of the body.

When the Moon is separating from the Sun, she brings burning of bodies and all that comes about through fire; but if the stars happen to be at a phase, one must determine the degree of distance from the Sun at which each makes its phase. If the two luminaries are afflicted by Saturn and Mars bearing witness to them, they produce madmen and those of unsound mind. When the Moon separates from the Sun and moves toward Venus, provided Venus is in no way harmed by the malefics, she bestows honor and grace and brings forth practitioners of varied accomplishments and great learning — some become perfume-sellers or garland-weavers or those who pursue such occupations as are fitting for festivals. But if Venus is harmed, or stands in an evil place, or is testified to by Saturn, she produces wool-workers or weavers. Separating from Venus, the Moon produces pleasures and passions and the entire nature of erotic desire; such natives will mix with women from a young age, though not with honorable ones. For it makes them ill-fated, much-blamed, impulsive, troublesome, and most ungrateful — yet possessed of good sense.

The Moon, full and moving toward Mercury, which is oriental, makes initiates of mysteries, geometers, precise mathematicians, and especially

when the sign is a bicorporeal one; but if it is lacking in light, it produces lethargic individuals, those who are dull-minded in their affairs, contentious toward their superiors. Making a separation from Mercury, it signifies matters of character and prudence; it produces those who are sickly, yet active and energetic; but before it, one will have no brother; and the same indications are to be understood by you also in the case of a feminine nativity.

The Moon, dissolving a conjunction and moving by recoil, lacking light, indicates injury to the eyes, and especially if a malefic also casts its gaze upon it. The Moon on the Ascendant, if Mars, separating from her, joins the Sun on the Ascendant, injures both eyes.

The Moon separating from Saturn and applying to Jupiter brings acquisitions through labor or changes of place; and the afflictions of this native will find remedy through divine aid, and old age will be favorable, and paternal inheritances will be preserved. The Moon moving from Jupiter to Saturn diminishes possessions and dims glory, and produces afflictions from moist causes, and brings old age marked by illness,

The Moon, moving from Saturn to Mars, grants resolution of evils. It makes men hot-tempered, active, heavy-spirited, unrelenting in friendship, and excessive in taking vengeance upon their enemies. The Moon moving from Mars to Saturn makes men melancholic and prone to illness, and cold in their actions.

The Moon moving from Saturn to Venus is favorable for all matters, but unfavorable for marriage and children. The Moon moving from Venus to Saturn: if Saturn is an evening star, it is unfavorable for marriage and children, but proves most excellent for all other matters; if Saturn is a morning star, it is unfavorable for all matters.

The Moon moving from Saturn to Mercury produces people who are astringent, wicked, envious, ungenerous, sluggish, and foolish. But if Mercury is evening, such persons live by knowledge, letters, or methods, and will find release from their passions; if he happens to be morning, they live honorably through education, yet are blinded. The Moon moving from Mercury to Saturn brings interruptions in their affairs and livelihood, and stagnation of undertakings; they are prone to many illnesses and subject to passions, but are prudent, knowledgeable, gifted with foreknowledge, and inclined toward the mysteries. 35

The Moon moving from Mars toward Jupiter is very favorable, especially when Jupiter happens to be a morning star; but even if it is an evening star, it brings relief from afflictions. The Moon moving from Jupiter toward Mars corrupts a life of prognostication and diminishes its own proper qualities; and if the Moon is waxing in light, it is far worse; the evils are diminished when it is waning in light, especially by night. It is worse still when the Moon marks critical days; by "critical days" are meant three enneads — the 9th, the 18th, and the 27th — and four hebdomads — the 7th, 14th, 21st, and 28th. These days of the Moon must therefore be observed in all matters, as they fall from conjunctions.

ing. 10

The Moon moving from Jupiter to Venus is favorable in all respects — for fortune, children, and marriage; though sometimes it also produces adulterers among such natives. But if Venus happens to be matutine, it will be favorable for livelihood and reputation, though the configuration is not equally good for children. The Moon moving from Venus to Jupiter is favorable for marriage, children, and property, even if it makes the application while angular; though it causes injury to the eyes.

The Moon applying to the Sun in a masculine stationary sign indicates a distinguished father and that the mother died first; in early youth it brings illness, wasting disease, and lowness of fortune; but as time advances it makes such natives fortunate, cheerful, and beloved by many friends.

The Moon moving from Jupiter to Mercury produces people quick to learn and prudent, though it is not equally favorable for children. The Moon moving from Mercury to Jupiter is good for fortune, children, and knowledge; for it produces wise and highly experienced individuals, even those who have received little formal education.

The Moon moving from Mars to Venus, when both are evening stars, * produces people who are lascivious and witness the deaths of women; but if they are matutine, it is favorable for livelihood and reputation, though bad for children. The Moon moving from Venus to Mars, when both are evening stars, produces people much censured and is bad for marriage; and when the nativity is feminine the ill effect will be somewhat less, but when masculine it is worse, for it brings danger on account of reputation.

The Moon moving from Mars to Mercury, both being eastern, produces people who are prudent and learned in a certain branch of knowledge; but when they are western,

[1] Ecclesiae Patres antipodes esse, quod philosophi Graeci docebant, omnes fere negavisse notum est (cf. Lactant., *Inst.*, III, 24; Aug., *Civ. Dei*, XVI, 9). Cosmas Indicopleustes ex S. Scriptura probare conatur omnino non licitum esse de antipodibus loqui (*Topogr. Christ.*, II, p. 157, cf. p. 119 = Migne, P. G., 88, p. 129, cf. p. 63) Hanc antiquorum doctrinam saeculo VIII Zacharias papa damnavit (Migne, P. L, LXXXIX, 946. Cf. *Realenc.* s. v. „Antipodes" col. 2533). Hic videmus Byzantinos usque ad saec. XV eiusdem fuisse sententiae.

being western, they are experienced, yet also deaf, unstable, and indolent, unwilling to toil. The Moon moving from Mercury to Mars, both being eastern, produces clever, cunning, popular orators, secretive men who meddle in the lives of others; but when they are western, men who delight in laughter and shameful amusements and who imitate shameful things, a deceitful, talkative, and mimicking man, a liar who glories in evil deeds.

The Moon moving from Mercury to Venus, both being eastern, produces men of fine natural talent, generous, cheerful, and agreeable; but when they are western, it makes them hot-tempered and quickly satiated. The Moon moving from Venus to Mercury, when both are eastern, produces wealthy, fortunate, distinguished, happily married, and blessed with good children; but when they are western, it makes them continent in matters of love and temperate.

When the Moon, moving away from conjunction, meets a benefic planet immediately after the conjunction's appearance, it is favorable for action and glory. But when it encounters a malefic, it brings harm. Above all, let it be understood by you that planets under the rays and in the declining houses have no power, while those on the angles and in the succedent houses, when free from the rays, are strong; and when they are in zodiacal signs, they make affairs vigorous.

## Ch. 142. On the Antipodes of the People and Other Living Creatures Beneath the Earth.

Some of the philosophers say that there are antipodes beneath the earth, that is, human beings and other living creatures, both four-footed and two-footed, and of every kind.

It is well known that the Church Fathers almost universally denied the existence of the antipodes, as the Greek philosophers taught (cf. Lactant., Inst. III, 94; Aug., Civ. Dei, XVI, 9). Cosmas Indicopleustes attempts to prove from Holy Scripture that it is altogether impermissible to speak of the antipodes (Topogr. Christ., II, p. 157, cf. p. 119 = Migne, P. G., 88, p. 129, cf. p. 63). This ancient doctrine was condemned in the eighth century by Pope Zacharias (Migne, P.L., LXXXIX, 916. Cf. Realenc. s. v., Antipodes, col. 2533). Here we see that the Byzantines held the same opinion right up to the fifteenth century.

καὶ βεβαιοῦνται τοῦτο οὕτως· ὅτιπερ ἐπειδὴ ὁ κόσμος ἐκ τεσσάρων στοιχείων συνίσταται, εἰσὶν δὲ ταῦτα τὰ τέσσαρα στοιχεῖα καὶ ἐν τῷ ἄνω προσώπῳ τῆς γῆς καὶ ἐν τῷ ὑποκάτω, γεννῶνται δὲ ἐξ αὐτῶν ἐν τῷ ἐπάνω προσώπῳ τῆς γῆς ἄνθρωποι καὶ ἕτερα ζῷα, δῆλον ὅτι γεννῶνται καὶ κάτω τῆς γῆς τὰ τοιαῦτα ζῷα, ἐπειδὴ καὶ τὰ αὐτὰ 5 στοιχεῖά εἰσιν καὶ ὑποκάτω, ἅπερ εἰσὶν ἐπάνω· ἀλλὰ ταῦτα μὲν φληναφῶσιν Ἑλλήνων παῖδες· ἡμεῖς δέ φαμεν ὅτι ὥσπερ οὐ δύναται ἀπὸ κάτω δώματα ἄνθρωπος κατακεφάλως περιπατεῖν, οὕτως οὐδὲ ὑποκάτω τῆς γῆς εἰσιν ἄνθρωποι καὶ ἕτερα ζῷα, εἰ μὴ μόνον συρόμενα καὶ πετόμενα. καὶ ταῦτά εἰσιν ἐν τῷ ὑποκάτω προ- 10 σώπῳ τῆς γῆς.

## De paeonia.

Brevem tractatum de paeonia Iosephus Heeg iam edidit *Catal.*, VIII,2, p. 167 ss. et egregiis annotationibus illustravit. Item formam recentiorem, Ἑρμηνεία τῆς παιονίας inscriptam, commentario docto explanavit Fridericus Pradel, *Griechische und Süditalienische Gebete*, Giessen, 1907 [Religionsg. Vers. und Vorarb. III, 3] Nonnulla de paeonia ex epistula Thessali excerpsi *Cat.* VIII, 4, p. 260. Saepissime huius plantae usus in formulis magicis praecipitur; vide e. g. Delatte, *Anecdota Atheniensia*, I, 1927, in indice p. 710. Cum multo plura de mirifica hac planta in codice Parisino 4 invenissem, ea quoque hic proferre statui, praesertim quod Iosephus Heeg observavit tractatum hunc necessitudine artissima cum capitulo libri primi Coeranidum (p. 13 ed. Ruelle) cohaerere atque utrumque ex libro Hermetis Trismegisti de plantis haustum esse.

And they confirm this as follows: since the world is composed of four elements, and these four elements exist both on the upper face of the earth and on the lower, and since from them on the upper face of the earth men and other living creatures are generated, it is clear that such creatures are generated also beneath the earth, inasmuch as the same elements that exist above also exist below. But these are the idle fancies of the children of the Greeks. We, however, say that just as a man cannot walk upside down on the underside of a ceiling, so neither are there men and other living creatures beneath the earth — except only those that creep and those that fly. And these dwell on the lower face of the earth.

On the peony.

Joseph Heeg published a brief treatise on paeonia in Catal., VIII, 2, p. 167 ff., and illustrated it with excellent annotations. Likewise, Friedrich Pradel explained a later form, inscribed Ἑρμηνεία τῆς πιονίας, with a learned commentary in Griechische und Süditalienische Gebete, Giessen, 1907 [Religionsg. Vers. und Vorarb. III, 3]. I excerpted some notes on paeonia from the Epistle of Thessalus, Cat. VIII, 4, p. 260. The use of this plant is prescribed very frequently in magical formulae; see e.g. Delatte, Anecdota Atheniensia, I, 1927, in the index p. 710. Having found much more concerning this remarkable plant in Codex Parisinus 4, I decided to present it here as well, especially since Joseph Heeg observed that this treatise is most closely connected with a chapter of the first book of the Cyranides (p. 13 ed. Ruelle), and that both were drawn from the book of Hermes Trismegistus on plants.

in the book called ancient. During the waning of the Moon, seek to find peony. Let it stand in a conspicuous and well-visible place, and thus you will be able to do so when the Sun enters the sign of Virgo. Most of them grow around Mount Haemus and around the mountains of Tauromenium and in great Babylon and around Thrace and beyond Gadeira and in the Aegean gulf; they also grow in other places, but do not possess as great a power as there, derived from the position of the place and the lot of the Signs and the natural emanation, as you yourself will be able to do in this way: since it is necessary, as has been said, that this sacred herb stand in a luminous place (or do it thus: take a closed seed and another open one, and wrapping them in 7 leaves of the same plant, bury them purely in an elevated place, wherever you wish; and when it has sprouted and become fully apparent to you, as has been said — guard it from rains and winds and the turbulence of spring — on a day of the Moon, in the first hour, that is, in her own hour, while she is in her waning phase, the Sun being in the sign of Virgo, before the Sun rises, go forth in a state of ritual purity, having ready a skin of a consecrated seal, as has been said in this sacred book concerning dissections.Write upon the skin these signa magica, and while hanging it, say the following:

Blessed is the God of heaven and earth, and blessed and glorified is Your holy name; all nature praises You, and the strength of all things, which comes from You, glorifies You. For You alone are perfect, without beginning, invisible, unapproachable, unchangeable, indescribable, intangible, eternal, inscrutable, unsearchable, incomprehensible, the beginning and the end, alpha <and omega>, Adonai, Elohim, Sabaoth, Pemêmephoraz, Geseragê, Amnia, Pana, Sadaê; You are the one who makes poor and makes rich, who humbles and exalts, who chastens and again heals, who kills and gives life [almighty Lord, Creator of all creation, of the invisible and visible creation a part, having made those things that were not connatural into harmony

painless and beneficial to life, just as it has been inscribed in the sacred books of the Egyptians.

And he who holds a part of the root, inscribing upon it the names of the most high God, which are these [magical signs], shall fear no demons, nor indeed shall the evil visitations that befall men come near him. But if he also inscribes these signs [magical signs] and keeps hold of it, he shall fear no poison, nor any other evil. For he will drive away from himself tertian and quartan fever and every chill of fevers, including daily fevers; he will drive away envy, the evil eye, and malicious scheming, and will render the one who wears it charming and pleasant to hear. If someone suffers from epilepsy and ties this root around himself, it will heal him in a wondrous manner. If someone is possessed by a demon, fumigate a small and slight amount of this root and you will drive out the demon. This is a divine work. — Take a small piece of the root of the plant and grind it, and take an equal amount of wild satyrion and male frankincense and keep them; then, taking a potsherd, inscribe upon it with a golden needle the beloved and the one who loves him embracing one another and entwining themselves together at the third hour of the night. Then, taking these likenesses, fumigate them together with the aforementioned herbs, and while fumigating say the following: "O saviors of love, bring to me the beloved woman., and immediately they will bring her knocking at the door and saying: "Open, open to me." But tell this mystery to no one. I have entrusted to you the power, so that you may learn the wisdom within me; for abstain from the company of women; for great is the shameful thing in them, and especially when they are in their menstrual periods,

From the juice, the following medicine is prepared, which when drunk heals all internal ailments occurring around the chest and the breast, both sides alike — that is, the liver, the spleen, the areas around the navel, the lower abdomen, the hypogastrium, and the kidneys; and in short, it is the greatest protective remedy. It is compounded as follows: of the juice of the same herb, 1 ounce; of the juice of pondweed, 1 ounce; of calamine storax, 5; of theogonon root, 1 — the dry ingredients with the

Grind in liquids and place in a glass vessel; and when need arises, give from it three hexagia to drink with wine. While the sufferer drinks, you recite the prayer seven times, and the Chaldean one once, and the sufferer is healed.

An amulet is also made from the root for the protection of vineyards, fields, and gardens. Inscribe on it with a knife these signs (signa magica), and hang it on the highest of the trees, so that from on high it may watch over the vineyards or the fields or the gardens; and if you do these things, they shall be harmed neither by hail nor by frost and excessive rain or even by a whirlwind; and it shall drive away from them every destructive creature and reptile, namely the caterpillar, the locust, the brachon, the mildew, the palchos, the bouchos, and the pēlocham that destroys vegetables and the fruits of plants, and the choumenos that lurks by night at the roots of trees and devours them, and the chous that destroys the vineyards by night.

Concerning thieves. — If on another small root you inscribe these words: "tomēri, phatnēri," and hang them behind the door of the dwelling, you will drive away every evil from that house, and you will render that house fortunate and prosperous.

Concerning loss of voice. If someone has had his tongue cut off and cannot speak, fumigate him with the root, saying thus: "phriēl," and you will heal him.

For forgetfulness. – If someone suffers from forgetfulness, let them chew a little of the root, and while drinking the juice recite this name: "Raphael, and you shall sharpen the mind to its keenest."

For the suppression of menses. — And if a woman suffers from the suppression of menses, give her one ounce of the root's juice to drink; and let her also recite the following: "aphá, chamá, naí, allá, phazá, tamaná, and you shall heal. For it will produce abundant menstrual flow. But you shall stop it, if you give another juice to drink without the spoken formula."

and you shall also have honor wherever you go, and people shall run to you as to a god. And if anyone inscribes upon leaves these names: "arkeu, ili," and places them upon the doorpost of a house where thieves enter, they shall be blinded and unable to see the way. The fruit of it also works for conception and prevention of conception. If a woman suffers from inability to conceive, take of the closed fruit and wrap it in a cloth of true silk, give it to the woman to wear at the abdomen, and it will retain the seed. One must also inscribe these things upon the cloth [signa magica]. This also causes barren women to give birth, but renders the woman who gives birth unable to conceive again: take one grain of the open storax and wrap it in the skin of a consecrated seal, and attach it likewise at the abdomen for three lunar cycles during the waning of the Moon; and thus she shall be barren. One must also inscribe upon the skin these things: [signa magica]. If you wish to test it, perform it on an animal or some bird and it shall not give birth.

15

From the grains is prepared a plaster which expels carbuncles, cleanses putrid and hard-to-heal ulcers, and restores them. It is composed as follows: of the herb of the grains, 1 libra; of the juice of the shoots, 1 ounce; of juice of sage, 2 ounces; of memacham root, 2 ounces; of wax, 1 ounce; of goose fat, 1 ounce; of terebinth resin, 1 ounce. Mix these together and keep them, and when you have need of them, apply the plaster; and when you blend these together, say the following: "ap, iō, ōn, elōi, oicham, chiak, Zambri, ripha, cham."

But if she is in labor with difficulty and there is danger, take the seed of the gaping herb and place it in oil. From this same oil, anoint the loins and the lower abdomen, and she will give birth without pain. And by doing thus you will be initiated into the mystery.

Let these things not be made known, and you shall not give them to another or to a child, but keep them alone as a treasure.

## De Dracone caelesti.

Vetusta opinio per totum fere mundum pervagata statuebatin caelo immanem draconem habitare, qui cum solem et lunam devoraret vel occultaret, defectiones eorum (cf. p. 199, 17 ss.) efficiebat. De hoc serpente caelesti saepe apud astrologos agitur, qui nodos cursus lunae sive Ἀναβιβάζοντα et Καταβιβάζοντα caput et caudam eius esse docebant (Bouché-Leclercq, *Astr. Gr.*, p. 122 s.) et mirabilia multa de natura et motibus monstri illius fabulantur (cf. *Catal.*, V, 2, p. 131 ss.; VII. p. 123 ss.; VIII, 3, p. 197; X, p. 10, p. 71). Quam doctrinam ad Chaldaeos refereudam esse iam capitulum in Catalogo Romano editum prodit (V, 2, p. 131 ss.) et hoc excerpto Parisino confirmatur; nam non solum Chaldaeos et Babylonios auctores laudat astrologus qui illud conscripsit (p. 195, 2, 12), sed etiam, cum addit eos illum draconem ἀθαλίαν appellare, optime edoctus esse videtur; scilicet *ath̄alia* nomen draconis est syriacum, quod voci assyriacae *antaluu, attaluu* respondet (Nöldeke et Bezold, *Zeitschr. für Assyriol.*, XXV, p. 356 ss.). Hunc *ath̄aliam*, cuius corpus ingens dimidia caeli parte extendebatur, lunam ore absorbere vel motibus abscondere Syri vulgo credebant (Nöldeke, *l. c.*; Nau, *Journal asiatique*, 1910, 1, p. 220 ss.; *Revue de l'Orient chrétien*, XV, 1910, p. 253 s [ex Severo Sebocht], cf. etiam Kayser, *Das Buch von der Erkenntniss der Wahrheit*, 1893, p. 253, 29 et infra p. 199, 18 ss.).

Commenticia sane sunt ista, sed late diffusa fuerunt et fides vulgi diu memoriam servavit draconis maligni quem veteres Babylonii in caelo collocaverant; cf. *Apoc. Ioh.*, XII, cum commentariis; *Acta Philippi*, 144 p. 86, Bonnet: ἕως ἂν παρέλθω πάντας τοὺς κοσμοκράτορας καὶ τὸν πονηρὸν δράκοντα τὸν ἀντικείμενον ἡμῖν. Multa de terribili dracone caliginis externae qui mundum circumdat et duodecim cubicula habet, ubi peccatores truduntur, narrat *Pistis Sophia* gnosticorum (cf. Schmidt, *Koptisch-gnostische Schriften*, index s. v. " Drache der äusseren Finsterniss „). Eundem draconem obscurum, qui in tertio caelo vivit et cuius venter Hades est, describit *Apocalypsis Baruch Graeca* (cf. James, *Apocrypha anecdota*, II [Robinson, *Texts and studies*, V], 1897, p. 186; cf. Introd., p. LIX ss. et Boll, *Zur Erforschung der Astrol.* [*Neue Jahrb. für das Klass. # EXCERPTS FROM CODEX 8 (PARIS. 2423).

FROM AN ANONYMOUS ASTROLOGER OF THE 12TH CENTURY (p. 198, v. 30).

---

On the Celestial Dragon.

An ancient belief, widespread throughout nearly the entire world, held that a monstrous dragon dwelt in the heavens, which, by devouring or concealing the sun and moon, caused their eclipses (cf. p. 199, 17 ff.). This celestial serpent is frequently discussed among astrologers, who taught that the nodes of the moon's course — the Ascending Node (Anabibazon) and the Descending Node (Katabibazon) — were its head and tail (Bouché-Leclercq, Astr. Gr., p. 122 f.), and many marvels concerning the nature and movements of that monster are related (cf. Catal., V, 2, p. 131 ff.; VII, p. 123 ff.; VIII, 3, p. 197; X, p. 10, p. 71). That this doctrine is to be traced back to the Chaldeans is already indicated by a chapter published in the Roman Catalogue (V, 2, p. 131 ff.) and is confirmed by this Parisian excerpt; for not only does the astrologer who composed it cite the Chaldeans and Babylonians as authorities (p. 195, 2, 12), but also, when he adds that they called that dragon ἀθαλία (athalia), he appears to have been very well informed; for athalia is indeed the Syriac name for the dragon, corresponding to the Assyrian words antaluu and atlaluu (Nöldeke and Bezold, Zeitschr. für Assyriol., XXV, p. 356 ff.). The Syrians commonly believed that this atalia, whose enormous body extended across half the sky, swallowed the moon with its mouth or concealed it by its movements (Nöldeke, l. c.; Nau, Journal asiatique, 1910, 1, p. 220 ff.; Revue de l'Orient chrétien, XV, 1910, p. 253 f. [from Severus Sebokht]; cf. also Kayser, Das Buch von der Erkenntniss der Wahrheit, 1893, p. 253, 29 and below p. 199, 18 ff.).

These are indeed fabrications, but they were widely disseminated, and popular belief long preserved the memory of the malevolent dragon that the ancient Babylonians had placed in the heavens; cf. Apoc. Ioh., XII, with commentaries; Acta Philippi, 144 p. 86, Bonnet: ἕως ἂν παρέλθω πάντας τοὺς κοσμοκράτορας καὶ τὸν πονηρόν δράκοντα τὸν ἀντικείμενον ἡμῖν. Much concerning the terrible dragon of the outer darkness who encircles the world and has twelve chambers where sinners are thrust is narrated by the Pistis Sophia of the Gnostics (cf. Schmidt, Koptisch-gnostische Schriften, index s. v. Drache der äusseren Finsterniss). The same dark dragon, who dwells in the third heaven and whose belly is Hades, is described in the Greek Apocalypse of Baruch (cf. James, Apocrypha anecdota, II [Robinson, Texts and studies, V], 1897, p. 186; cf. Introd., p. LIX ss. et Boll, Zur Erforschung der Astrol. [Neue Jahrb. für das Klass. Alt., XXI], 1908, p. 120, n. 1.) Cf. also Cat. VII, p. 245, 5 and the figure, p. 246; add

6th century, Olympiodorus of Alexandria, 18 (Ruelle, Alchimistes grecs, p. 80): The hierogrammatists of the Egyptians, wishing to engrave the cosmos on obelisks or in sacred script, carve an ouroboros dragon, whose body is marked in accordance with the arrangement of the stars.

## E. 9. On the Ascending Node: First Account.

The Babylonians, that is, the Chaldeans, call this an accursed dragon-like spirit, two-headed and two-tailed, with one of its heads located — so to speak — in Libra, and the other in Scorpio; likewise its tails, one in Aries directly opposite Libra, and the other in Taurus. It governs one third of the zodiacal circle, making its course in a direct (anaphoric) direction, and completing its transition beginning from the thirtieth degree of Libra, then shifting to begin again from the thirtieth degree of Virgo toward Libra. Likewise the tail in Pisces shifts in the same manner. Both the head and the tail dwell in each sign for 19 months and 7 days. The Babylonians, however, define it as 9 months and 7 days each, but not in the same way regarding the days. Rather, it holds its two heads and two tails in diametrically opposite signs, one sign each, and produces its effects within them. It always follows this course without delay or diminution, but rather makes a single retrograde motion.And it proves more malefic than even the malefic planets themselves. Sagittarius and Gemini are subject to it, and greater evils are brought about in these signs; and the head does not work evils as great as those wrought by its tail.

## G. 9. Second Discourse on the Ascending Node.

The Ascending Node, called the ecliptic dragon, moves entirely in the opposite direction, holding dominion over the hemisphere of the heavens; and wherever it is allotted, the Tail called the Descending Node is diametrically opposite. For this reason, inquiry must be made concerning inceptions with respect to each undertaking. One must observe the Moon as it advances in its course toward all the planets; and if it falls within four signs of the Descending Node, it is malefic, and likewise with respect to the Ascending Node, or

## De Circo.

Antiqui, cum circensibus mirum in modum dediti essent, saepe ad magiam confugerunt, ut factionis adversae agitatores vel equos defigerent (Audollent, *Defixion. tabellae*, n^os 234 ss.; Friedländer, *Sittengesch.*, II^8, p. 350, Maurice, *Comptes rendus Acad. Inscr.*, 1926, p. 86), saepe ad astrologiam recurrerunt, ut victoris nomen sciscitantibus proderetur. Itaque Firmicus Maternus mathematico hoc dat consilium (II, 30, 12) : " Secerne te ab spectaculorum semper illecebris, ne quis te fautorem alicuius esse partis existimet ". Haud raro inveniuntur apud astrologos Graecos capitula " de hippodromo " ubi diversi modi indicantur praedi-

wherever it treads upon the Head or the Tail † and take note in the matters of eclipses; likewise, the Moon waning and moving toward Saturn is malefic in the square aspects. And just as the Moon waning toward Saturn is malefic in all respects, so too is it benefic in all respects when moving toward Mars and Venus. With respect to Saturn, however, when the contrary positions are allotted, it is malefic in the trine; the trines are six, the squares four, the sextiles three, and the opposition is that which is directly contrary; the aversions are twelve. And when the malefics — I mean Saturn and Mars — fall in square aspect, they are malefic; but in trine aspect, they are benefic. For the nature of the trines is harmonious; and the malefic qualities of the squares are analogous to those of the oppositions. The same applies likewise to the benefics. 10

One may also consider it thus: the horoscope of the world falls in Cancer; since the sign is very watery and is called the house of the Moon — the † body, both tropical and fearless and unstable — and for this reason it is not enduring in life, but everything is seized one after another. And in the genesis of the cosmic disposition, each of the stars holds the chronocratorship for one thousand years. It distributes the universal years among the other planets, and each one, receiving its portion, acts according to its power with respect to the climes; if the malefics receive it, they produce harm, floods, earthquakes, disorders, pestilences, and famines, as well as division of the household; likewise, if the benefics receive it, they produce peace, stability, rejoicing, and all other good things. And for this reason there is not concord everywhere and in all things; likewise, in the case of human beings, when one is born, each receives the chronocratorship of 10 years and 9 months, and if at a diurnal nativity the Sun takes it immediately, and if at a nocturnal one, the Moon. And in sequence, the preceding stars receive it in turn, each likewise taking the 10 years and the 9 months. Sequuntur nonnulla alia minoris momenti.

On the Circus.

The ancients, being wondrously devoted to the circus games, frequently resorted to magic in order to bind the charioteers or horses of the opposing faction (Audollent, Defixion. tabellae, nº 234 ff.; Friedländer, Sittengesch., 118, p. 350; Maurice, Comptes rendus Acad. Inscr., 1926, p. 86), and often turned to astrology so that the name of the victor might be revealed to those who inquired. Thus Firmicus Maternus gives this advice to the astrologer (II, 30, 12): Secerne te ab spectaculorum semper illecebris, ne quis te fautorem alicuius esse partis existimet. Chapters "on the hippodrome" are found not infrequently among the Greek astrologers, where various methods are indicated for predicting

Nam cum veteres astronomi singulis planetis colorem proprium tribuerent, nempe caeruleum Mercurio, album Veneri, rubrum Marti, viridem Lunae (Vett. Val., I, 4; Rhetor., *Cat.*, VII, p. 214 ss., cf. Boll., *Beobacht. farbiger Sterne* [Abhandl. Bayer. Omnino has factiones cum [deis quibusdam vel cum quattuor elementis cognationem propriam habere saepissime traditur (Tertull., *De spect.*, 9 [e Suetonio?]; Lydus, *De mensib.*, IV, 30, p. 89 Wünsch.; Malalas, *Chronogr.*, VII, p. 172 ss. Haec iam scripta erant, cum doctissimus iuvenis Petrus Wuilleumier egregium commentariolum mihi obtulit, ubi locis Graecorum astrologorum accurate editis et Francogallice versis de colorum relatione cum factionibus circi optime disseruit (*Mélanges de l'Ecole fr. de Rome*, XLIV, 1927, p. 1-26). predicting from the stars which horses will win in a race (Cal. V, 3, p. 127 from cod. Romanus, 20, cf. Albohazen Haly filii Abenraget ed. Liechtenstein, Basileae, 1571, p. 132, cap. XXIII, p. 340, cap. XCVIII)[1].

This excerpt which we here edit, although it belongs to the twelfth century C.E. [p. 198, 30], presents a doctrine drawn from ancient writers (v. 2: Παλαιοί). For since the ancient astronomers assigned to each planet its own proper color — namely blue to Mercury, white to Venus, red to Mars, green to the Moon (Vett. Val., 1,4; Rhetor., Cat., VII, p. 214 ss., cf. Boll., Beobacht. farbiger Sterne [Abhandl. Bayer. Akad., XXX], 1918, p. 20; Roscher, Lexikon, s. v. "Planeten," col. 2531) — the individual factions of the circus, which were distinguished by those same colors, are here connected with the four stars by a certain association. It is very frequently reported that these factions had a particular affinity with certain gods or with the four elements (Tertull., De spect., 9 [from Suetonius?]; Lydus, De mensib., IV, 30, p. 89 Wünsch.; Malalas, Chronogr., VII, p. 172 ss. Bonn, cf. Mon. mysl. Mithra, II, p. 69 s.; Soveri, De ludorum memoria praecipue Tertulliana, Helsingfors, 1912).These remarks had already been written when the most learned young scholar Petrus Wuilleumier presented me with an excellent short commentary, in which, by carefully editing and translating into French the relevant passages of the Greek astrologers, he discussed admirably the relationship of the colors with the factions of the circus (Mélanges de l'Ecole fr. de Rome, XLIV, 1927, p. 1–26). It is a pleasure to refer the reader to that dissertation.

## III. 17. On Outcomes.

The ancients, having also examined matters pertaining to the hippodrome, assigned the colors to certain of the stars: to Mercury they gave the blue (venetum), to Venus the white, the red (russeum) to Mars, the green to the Moon, victory to Jupiter and defeat to Saturn — that is, declaring the charioteer who is favored by Jupiter to be the victor, and the one favored by Saturn to be the defeated; as for the Sun, some declared that it aids the red faction on account of its fiery nature, but the majority call it the mediator, and have made it a middle and common star; while others [assign] the Moon

9 δὲ suppl. The Sun is called the mediator because it occupies the fourth place in the Chaldean series of planets. Cf. Boll, Realenc. s. v. Hebdomas, col. 2567 ff.

[1] Nearly the same content as found at the beginning of this chapter in the Parisinus manuscripts, but in a more corrupt form, is transmitted in an excerpt from codex Ambrosianus 886 (=C, 222 inf.), f. 42, which my most learned friend C. O. Zuretti kindly transcribed for me upon my request:

Note On the Hippodrome.

It should be known that the Moon aids the Greens, the Sun aids the Reds; Saturn and Venus aid the Blues. When, therefore, the Sun chances to be in Venus, in that hour, if they race, the Blues win; but when it is in Mars, the Greens win, for he assists them. If Jupiter chances to be angular — that is, if he is in the midheaven and in the lower heaven (?) — then without doubt the Blues win; especially if the Moon also happens to be without light and inclines toward the lower and inferior region of the meridian. — Cf. Wuilleumier, op. cit. p. 2.

according to the beginnings and ends from its dichotomy, that is, from the 7th, likewise also at the full moon up to the 7th, he said that it aids the Blues, and thereafter the Greens. This seems well-conceived; but because she is weak, as appears evident when she partakes of little light, they say she is unable to give aid. Therefore, perhaps from this misfortune the affairs of the 5 Blues go well, and since the stars then possess their power when they are in their own houses or exaltations or triplicities, or are term-rulers, or swift-moving, or aspect Jupiter or the Sun from favorable configurations, the astrologer necessarily examines these factors before all others and assigns victories based on them. But if there are retrograde motions, or they are 10 aspected by malefics, or are combust by the Sun, or in their own oppositions, or in the foreign terms of malefics, or from evil configurations, that is, trines &ft;> and setting, or in their depression aspecting Saturn, then he pronounces defeat for those sides, and for this reason the predictions have often failed. 15

And for this reason that Alexandrian Theodoros, who had become most experienced in the science and had investigated the affairs of the hippodrome more thoroughly than any other, discovered yet another most necessary method — not neglecting this one either, but looking to all these factors — he made his scrutiny more refined and determined that 20 the planets above the earth are more powerful than those beneath it, and assigned victory to those above, as for example if Venus happened to be above the earth at the hour of the race, while Mars was below the earth at the same time, he assigned victory to the White faction; but if both were above the earth, and one of them happened to be at the celestial center above the earth, again he assigned victory to the planet 25 at the center. Holding this knowledge privately, he would tell whichever faction he wished: "Let the hippodrome race take place at the 7th hour, or the 8th, or the 6th, and the one side will defeat the other."From this, the many — or rather, almost all — not knowing the reason, condemned him as a sorcerer. Something of this kind also occurred at the hippodrome held during the 10th indiction of the year 843: 30 for while it was customary for the hippodrome race to take place at the 7th hour or the beginning of the 8th, or throughout the whole 8th hour, it was extended until the 9th, and the Moon declined from the 7th place to the 6th — that is, the place concerning injury — and immediately the Green faction was routed, as Venus was falling in the midheaven and everything worked in favor of the Whites, as you may 35 learn.

From the following folios of the Parisian codex I excerpt only a few passages:

F. 23. The unaspected positions of the Moon, as the ancients say, are almost worse than even the malefic aspects. One must know that the Moon is said to participate in bodily matters more than the other stars, as she is closer to the earth and moves, as it were, among us, and from her are judged both the bedridden states of the sick and the other bodily conditions; and that this is indeed so is shown also by the behavior of crustaceans, by those afflicted with lunacy, by the tides, and by the other flowing phenomena.

F. 23. Every planet approaching the Sun within fifteen degrees before or after, being hidden by it or combusted, is not benefic but harmful; for the Sun, being the most dominant and powerful of all, dulls the power of the planets in proximity to him, weakening them entirely and rendering them of no effect. The Sun and the Moon are harmed only by the Ascending Node and the Descending Node, both luminaries within three degrees before or after; they call the Ascending Node the head of the so-called dragon, and the Descending Node its tail. Lunar and solar eclipses occur when the luminaries draw near to the conjunctions and full moons together with these nodes, and the courses of such planets grow feeble through their conjunction with them, and because they become inoperative in relation to their own base, their lights are obscured. And if it is a full moon, an eclipse of the Moon occurs, because she, being fully illuminated and having her entire disk in opposition to the Sun, is deprived sometimes of all her light, sometimes of half, or more or less, according to the conjunction with the Descending or Ascending Node.The Sun undergoes its eclipse near the conjunction with the Moon, as she runs together with him and, by reason of her slow motion, dims his light.

## Amicitia seu inimicitia Lunae cum planetis.

Tractatus hic tribus tantum codicibus ad nostram videtur aetatem pervenisse primum Parisino 2424 et Veneto 7, quo ff. 244-248 traditur, sed hunc ex illo descriptum esse mihi persuasi cum eum in bibliotheca S. Marci inspexissem. Exstat quoque hoc opusculum in Berolensi 147, quem iamdudum apographum Parisini esse Franciscus Boll confirmavit (*Cat.* VII, p. 36). Itaque recensio mea solo libro Parisino nititur. Sermo vulgaris horum praesagiorum tardam aetatem prodit, et illa ab astrologo quodam Byzautino ex Arabica vel Persica lingua versa esse crediderim, sicut ea quae sequuntur de mansionibus lunae. (Cf. p. 207, 27 Περσικοὶ δοῦλοι). De " Amicitia vel inimicitia media vel tota " lunae cum planetis nusquam loquuntur veteres astrologi Graeci, sed vide Apomasarem, cod. Rom. 2, f. 61 (*Cat.* V, 1, p. 22).

# EXCERPTS FROM CODEX 9 (PARIS 2424).

## F. 212. Preparation of Ink 1.

Take one pound of rainwater, one ounce of pure ground gall-nut, and 4 hexagia of sumac; first boil the sumac, and having strained or filtered it, pour the liquid into a tinned earthenware pot and let it heat well; then put the ground gall-nut into the pot and let it boil thoroughly. After the gall-nut has blended and become like a broth, remove the vessel from the hearth, and once it has cooled, strain it and press out the compound until it drains well. Then add a little alum until the color pleases you; thereafter add also finely ground gum and stir it every day. 10

## Friendship or enmity of the Moon with the planets.

This treatise appears to have survived to our age in only three codices: first, the Parisian 2424 and the Venetian 7, in which ff. 244–248 it is transmitted; however, I became convinced that the latter was copied from the former after I had examined it in the library of Saint Mark. This opuscule also exists in the Berlin 147, which Francis Boll long ago confirmed to be an apograph of the Parisian (Cat. VII, p. 36). My edition therefore rests solely on the Parisian manuscript. The vernacular style of these prognostications betrays a late date, and I would believe them to have been translated from Arabic or Persian by some Byzantine astrologer, just as are the passages that follow concerning the lunar mansions. (Cf. p. 207, 27: Περσικοί δοῦλοι.) Concerning "the full or partial friendship or enmity of the Moon with the planets," the ancient Greek astrologers speak nowhere on this subject, but see Apomasar, cod. Rom. 2, f. 61 (Cat. V, 1, p. 22).

I have preserved the manuscript's text throughout. 2 λαχάν, a Persian word lak ==French laque 3 σουνα is found in Ducange's Glossary from this very manuscript, but the word is not interpreted 4 διειλήσας cod., corr. ## De viginti octo mansionibus Lunae.

Praesagia ex viginti octo mansionibus lunae petita in astrologia Graeca nusquam comparent, et tota haec doctrina zodiaci lunaris ex Arabum mathematicis hausta serius ad Byzantinos et Latinos transmissa est. Arabice eam exposuit e. g. Abenragel (*Alboazen Haly filius Abenragel*, VII, cap. 101, p. 342 ss. ed. 1551). Graece exilia praecepta eiusdem farinae atque haec auguria Parisini 2424 iam a Iosepho Heeg edita sunt *Cat.* V, 3, p. 90 ss. ex codice Vaticano 1056 et Parisino 2419. Latine, quid XXVIII mansiones protendant, primum, ut videtur, docuit "liber Alexandri" ante saec. X ex Syriaco opere versus et in codice Pariisno *lat.* 17868 servatus (cf. *Revue archéologique*, 1916, I, p. 18 ss.). Sed fusius de his disserendum erit in Catalogi nostri tomo IX, cum ex codice Oxoniensi Cromwelliano 12, p. 402, excerptum amplius de εἴκοσι ὀκτὼ μοναὶ τῆς Σελήνης edetur, quod accurate descripsit doctissimus iuvenis G. D. Brooks.

Opusculum hoc, sicut ea quae antecedunt (cf. p. 200), hoc solo codice Parisino 2424 nobis traditum est, nam codex Berolinensis 147 (= German. 21), f. 315, et codex Marcianus 335 (= Venet. 7), f. 284, in quibus quoque exstat, apographa Parisini esse certissimo indicio probari potest. Nomen enim mansionis nonae Arabicum et primum verbum καλόν in utroque omissa sunt, quia in summo folio 221 libri Parisini, iam lacero, avulsa erant.

When the Moon is in Cancer, it is auspicious to send a courier on foot.

When the Moon is in Leo, it is auspicious to go to the bath, to undergo bloodletting.

When the Moon is in Virgo, it is auspicious to cut and wear new garments, to learn.

When the Moon is in Libra, it is auspicious to feast, to hold a drinking party, to card wool.

When the Moon is in Scorpio, it is auspicious to perform labors, to take a medicinal drink.

When the Moon is in Sagittarius, it is auspicious to go to the bath, to undergo bloodletting.

When the Moon is in Capricorn, it is auspicious to perform some service or task.

When the Moon is in Aquarius, it is auspicious to keep to rest and quiet.

When the Moon is in Pisces, it is auspicious to carry out certain affairs, to work in goldsmithing.

Here it has reached its end.

## On the Twenty-Eight Mansions of the Moon.

Presages derived from the twenty-eight mansions of the Moon appear nowhere in Greek astrology, and this entire doctrine of the lunar zodiac was drawn from Arab mathematicians and transmitted later to the Byzantines and Latins. It was expounded in Arabic by, for example, Abenragel (Alboazen Haly filius Abenragel, VII, cap. 101, p. 342 ff., ed. 1551). In Greek, brief precepts of the same type as these omens from Parisinus 2424 were already edited by Joseph Heeg in Cat. V, 3, p. 90 ff., from the Vatican codex 1056 and Parisinus 2419. In Latin, what the XXVIII mansions portend was first taught, it seems, by the book of Alexander, translated before the tenth century from a Syriac work and preserved in codex Parisinus lat. 17868 (cf. Revue archéologique, 1916, I, p. 18 ff.). But these matters must be discussed more fully in volume IX of our Catalogue, when a more extensive excerpt on the εἴκοσι ὀκτώ μοναὶ τῆς Σελήνης from the Oxford Cromwellian codex 12, p. 402, will be published, which the most learned young scholar G. D. Brooks has accurately described.

This short work, like those that precede it (cf. p. 200), has been transmitted to us through this single manuscript, Paris. 2424, for it can be demonstrated with absolute certainty that codex Berolinensis 147 (= German. 21), f. 315, and codex Marcianus 335 (= Venet. 7), f. 284, in which it also appears, are apographs of the Parisinus. For the Arabic name of the ninth mansion and the first word καλόν are both omitted in these two copies, because they had been torn away from the top of folio 221 of the Parisinus, which was already damaged.

# EXCERPTA EX CODICE 10 (Paris. 2506).

## Rhetorii Ægyptii excerpta nova.

In foliis 1-24 codicis Parisini 2506 transscripta esse capitula viginti octo saeculo XI ab astrologo Byzantino ex Rhetorii *Thesauris* deprompta iam anno 1918 in *Mélanges de l'Ecole française de Rome*, p. 38 ss. monstravimus; cf. etiam *Cat.* VIII, 4, p. 115 ss. et supra p. 74 ss. Ex his excerptis omnia quae nondum edita erant hic publici iuris facere statuimus, ut ad ingens Rhetorii opus edendum, quod est in votis, quam plurimum conferamus. Nonnulla sane in primis capitulis quae hic invenies obscura sunt et plus quam semel librarium notas archetypi corrupisse apparet. Attamen a futilibus et abstrusis computationibus astrologicis non abhorruimus, cum ista quoque ad indolem et scientiam mathematici saeculi VI melius cognoscendas aliquantum valeant.

Cum in genituris et exemplis allatis quintum clima saepius indicetur, non Alexandriae sed Constantinopoli, " urbe beata quae in medio quinto climate sita est " (*Cat.* II, p. 182, 24) astrologum Ægyptium scripsisse apparet, quod iam ex aliis indiciis *Cat.* VIII, 4, p. 115 collegimus.

Ut securius ardua haec capitula ederemus, doctissimum professorem Lovaniensem adiimus, sac. A. Rome, quo nemo operum astronomiae Graecae nunc intellegentior est. Qui propensa in nos voluntate in paginis 221-233 sanandis strenue nos adiuvit et rationes expunxit Ptolemaei tabulis Magnae Syntaxis usus. Rhetorium tamen in computationibus usum esse Tabulis manualibus (Πρόχειροι κανόνες) Ptolemaei nos edocuit, quarum textus genuinus deperditus est. Tabulae ascensionum rectarum, ad singulos gradus eclipticae lineae scriptae, a solstitio brumali incipiebant; tabulae autem ascensionum obliquarum, quae a puncto vernali incipiebant, ad singulos zodiaci gradus compositae erant secundum septem climata. Posterius adiecta est tabula propria pro urbe Constantinopoli. Quae Rhetorio praesto nondum fuit, cum tabulam quinti climatis, ut supra diximus, adhibuerit.

* * *

Rhetorius interdum ad alia capitula operis sui nos delegat, nempe in cap. 16, p. 239, 3, ad cap. κη' Περὶ ἀφετῶν; in cap. 21, p. 241, 17, ad cap. ιϛ' de sorte Fortunae; in cap. 22, p. 243, 20, ad cap. ιε', ubi de μοιρικὰ κέντρα τῶν ιβ' τόπων agebatur, [= p. 221, cap. ιβ']; p. 244, 18, ad cap. ιϛ' (τὰς τριγωνικὰς πλευράς etc.),

# EXCERPTS FROM CODEX 10 (PARIS. 2506).

## New Excerpts from Rhetorius of Egypt.

That twenty-eight chapters transcribed in folios 1–24 of the Parisian codex 2506 were drawn in the eleventh century by a Byzantine astrologer from the Thesauri of Rhetorius, we already demonstrated in 1918 in the Mélanges de l'École française de Rome, p. 38 ff.; cf. also Cat. VIII, 4, p. 115 ff. and above p. 74 ff. Of these excerpts, we have decided to publish here all those that had not yet been edited, so as to contribute as much as possible to the preparation of the great edition of Rhetorius's work, which remains our goal. Some passages, to be sure, especially in the first chapters found here, are obscure, and it is evident that more than once the copyist corrupted the notes of the archetype. Nevertheless, we have not shied away from the trivial and abstruse astrological computations, since these too are of some value for a better understanding of the character and mathematical learning of the sixth century. Since the fifth climate is frequently indicated in the nativities and examples cited, it appears that the Egyptian astrologer wrote not at Alexandria but at Constantinople — "the blessed city situated in the middle of the fifth climate" (Cat. II, p. 182, 24) — a conclusion we had already drawn from other indications in Cat. VIII, 4, p. 115.

To ensure greater accuracy in editing these difficult chapters, we consulted the most learned professor at Louvain, Fr. A. Rome, than whom no one is now more knowledgeable in the works of Greek astronomy. With generous goodwill toward us, he diligently assisted in correcting pages 221–233 and worked out the calculations using Ptolemy's tables in the Magna Syntaxis. He further instructed us that Rhetorius, in his computations, made use of Ptolemy's Handy Tables (†Πρόχειροι κανόνες), the genuine text of which is lost. The tables of right ascensions, written for each degree of the ecliptic, began from the winter solstice; the tables of oblique ascensions, which began from the vernal point, were compiled for each degree of the zodiac according to the seven climata. At a later stage, a special table was added for the city of Constantinople — one that was not yet available to Rhetorius, since, as noted above, he made use of the table of the fifth clima.

Rhetorius occasionally refers us to other chapters of his work: namely in cap. 16, p. 239, 3, to cap. κη' Περὶ ἀφετῶν; in cap. 21, p. 241, 17, to the chapter on the Lot of Fortune; in cap. 22, p. 243, 20, to cap. ιε', where the subject was the ποιμένικα κέντρα τῶν ιβ' τόπων [= p. 221, cap. 18]; p. 244, 18, to cap. ις' (τὰς τριγωνικὰς θέσεις etc.),

Quorum numeri neque cum eis qui nunc in codice Parisino 2425 (*Cat.* VIII, 4, p. 116 ss.) traduntur et in summario quoque Rhetorii, in *Cat.* VIII, 3 p. 104 edito, indicantur, neque cum eis qui in codicibus excerptorum Byzantinorum in margine adscripti sunt, usquam congruunt, ita ut illos numeros ad opus mathematici saeculi VI referendos esse appareat adhuc integrum. Ergo ab ipso Rhetorio non a compilatore serioris aevi haec in argumento inserta sunt et ad amplos "Thesauros" astrologi Ægyptii restituendos aliquid saltem conferre possunt.

[= p. 229]; p. 246, 22 and 247, 5 on chapter 5 concerning the twelve places. The numbers of which neither agree with those now transmitted in the Parisian codex 2425 (Cat. VIII, 4, p. 116 ff.) and indicated also in the summary of Rhetorius, edited in Cat. VIII, 3 p. 104, nor with those inscribed in the margins of the Byzantine excerpt codices, so that those numbers evidently belong to a still intact mathematical work of the sixth century. Therefore these were inserted into the argument by Rhetorius himself and not by a compiler of a later age, and can contribute at least something toward the restoration of the extensive "Thesauri" of the Egyptian astrologer.

## XII. How one must find the degrees of the cusps of the twelve places.

An example nativity for Climate 5, year of Diocletian 145, Thoth 10 into the 11th, at the beginning of the 4th hour of the night: Sun in Virgo 14° 19′, Moon in Pisces 3° 4′, Saturn in Sagittarius 14° 31′, Jupiter in Libra 15° 41′, Mars in Virgo 21° 6′, Venus in Leo 25° 40′, Mercury in Libra 3° 33′, Ascendant in Taurus 25° 16′, Midheaven in Aquarius 3° 37′, Ascending Node in Capricorn 30° 41′, Syzygy in Virgo 1° 26′, Lot of Fortune in Sagittarius 3° 31′, Lot of Daemon in Scorpio 14° 1′.

Let us set forth the twelve places in degrees, in order to demonstrate according to natural and consistent reasoning the angular and cadent distances of the degrees as follows:

For since the 5 degrees rising before, as Ptolemy says, subtracting these from the given degree of the horoscope, we shall find the beginning of the centrosis of the horoscope at 20° 16'; corresponding to these in the right sphere are the ascensions 137° 44'. Taking also the hourly times of the 20° 16' degree of Taurus according to the 5th climate, 17° 44', and doubling these we obtained 35° 28', and subtracting from 137° 44' we found the remainder 102° 16'. With these 102° 16' there culminates in the right sphere Aries 13° 21'. And again by the same procedure, subtracting 35° 28' from 102° 16', we found the remainder 66° 48', with which there culminates again in the right sphere we found Pisces 4° 8'. This degree of Pisces 4° 8' will then be for us the beginning of the 11th place, and the degree of Aquarius 3° 11' the beginning of the 10th, so that the Moon is rather in the 10th place; and again subtracting 35° 28' from 66° 48', the remainder is 31° 20', with which there culminates

But Rhetorius, not the scribe, seems to have erred [Rome] 12 After μοῖραι I have marked a lacuna; something is missing. Cf. Ptolem. we found in the right sphere Capricorn 29°. These therefore will be the cusps of the midheaven; but the midheaven from the beginning was Aquarius [20° 3′ 37″. It therefore precedes by) 4° 30′. But it ought to have preceded by 5°. It differed therefore by nothing 30′. The reason for this is that Ptolemy says neither temporal nor local degrees ought to 5 precede the center, but the degrees of the intelligible Zodiac, the immobile one that configures the moving local and temporal degrees. But we took the moving and sensible degrees of 5°. When therefore Ptolemy says also "the right sextiles to these 30 degrees," he speaks of the intelligible ones; for those are the ones that always 10 form configurations with each other exactly at 30 degrees; but the moving ones have this only approximately.

But it is necessary to set forth the position more precisely again. Since from Capricorn 29° 7′ to Cancer 29° 7′, the times of the culminations of the hemisphere are 180 degrees, of which those from Capricorn 29° 7′ to 15 Taurus 20° 16′ are co-culmination times of 6 × 17′ 44″, that is, 106° 24′. The remainder therefore from Taurus 20° 16′ to Cancer 29° 7′ are co-culmination times of the remaining degrees toward the hemisphere 73° 36′; of which one-third of the times is 24° 32′. Subtracting therefore 24° 32′ from the given degrees 31° 20′, the remainder is 6° 20 48′; with which Capricorn 6° 13′ co-culminates. The beginning of the 9th will therefore be Capricorn 6° 16′. Again, subtracting from 6° 48′ 24° 32′, the remainder is 342° 16′; with which Sagittarius 16° 45′ co-culminates. And the beginning of the 8th will therefore be Sagittarius 13° 48′. Again, subtract 24° 32′ from 342° 16′, the remainder is 317° 44′, with which 25 Scorpio 20° 16′ co-culminates, which is diametrically opposite to the ascendant; and the points diametrically opposite to these will be the cusps of the lower places, that is, the 2nd, 3rd, 4th, 5th, and 6th.

It should be known that if one intends to practice according to Ptolemy, one must do so using Ptolemy's terms, methods, and the Lot of Fortune; but if according to the Egyptians, then using the Egyptian methods; and if according to Valens, then according to Valens's methods, both the

the ascendant and the midheaven must be calculated, and all will be in agreement with one another. For indeed their examples also accord with their own methods with respect to the ascendants and the midheavens. Hence he also seems to succeed with his examples. But after all the configurations, whether favorable or unfavorable, one must pray to God to obtain his mercy; for he alone is capable of all things.

## 13. On the Years of Life According to All the Rulers and House Masters.

If the Lot of Fortune is the apheta, the Sun afflicted by Saturn and Mars will be the anaeretes; for he says: "when the Moon releases, the place of the Sun also destroys," and so on; but also in another nativity of a full moon, where the Lot of Fortune is not the apheta, nevertheless even then the Sun, being afflicted and conjoined with the Lot of Fortune, or some other malefic, one must observe whether a deadly climacteric may result, because the Lot of Fortune is the lunar ascendant and an angular cusp and possesses the power of an angle, even if it is in a declining house. But in a nativity of a new moon, one need no longer observe the same thing.

## 14. How One Must Find the 3 Hours by Which the Ascendant Is Distant from Those on Either Side of Both the Midheaven and the Descendant.

In the 5th climate, ascendant Taurus 11° 13′, midheaven Capricorn 23°, rising-time of the 5th climate for Taurus 11° 13′: temporal hours 24° 54′; right ascension of the midheaven for Taurus 11° 13′: 128° 42′. ** From 103° 48′, the diurnal seasonal hours of the ascendant are 17° 19′. I divide 103° 48′ by 17° 19′; the result is approximately 6 seasonal hours, which is the distance that Taurus 11° 13′ lies from the midheaven at Capricorn 23° 4′. To find also the distance from the anti-midheaven: the anti-midheaven is Taurus 11′, that is, the nadir,

Scorpio 11° 13. Rising time of the right sphere: 318° 42'; rising time of the climate: 232° 30'; excess: 76° 12'. Hourly times of the ascendant: 12° 41'. Divide 76° 12' by 12° 41': the result is approximately 6 hours, which is the distance of the nadir from the midheaven. Therefore, with Taurus 11° 13' being the degree at the anti-midheaven, we shall say that after the excess times of 76° 12' the nadir will reach the eastern angle; and again, with the ascendant being Taurus 21° 11', we shall say that after the excess times of 43° 48' the ascendant will reach the culminating angle (midheaven). The same procedure we shall also apply to each chance degree of the Zodiac, and for the remaining ones the interval is the same, both from the 4th to the 7th and from the 7th to the 10th, that is, to the midheaven.

But now let it be supposed that the ascendant/apheta is Taurus 12° 4', the midheaven Capricorn 23° 30', the ascensional time 25° <26', in the right sphere 25° 21', and Saturn at degree 107° 46'. And it being necessary to find after how many 15 years the following side of Saturn will conjoin the apheta, that is the 12th degree of Taurus, taking the degrees co-culminating with Saturn, 285° 7' of the right sphere, from which subtracting the 25° and the co-culminating degrees of Capricorn, † and the remaining excess of degrees 71° 41'. And the apheta is also distant from the midheaven 20 by times <104°> 4' 2'. Saturn is therefore distant from the ascendant by times 32° 21'. The diurnal seasonal hours for the fifth climate are 15° 21'; I divide the 71° 41' by the 15° 21', giving seasonal hours 4° " "15". And since I am seeking when the following sextile degree of Saturn will conjoin the apheta, I add to the 107° 7' of the midheaven degrees 25 of Saturn the 60° of the sextile side; and they become in the sphere 157° 7', that is approximately Gemini 9°. The following sextile side of Saturn therefore has approximately Gemini 9° according to the sphere.

Again, for Saturn) in the fifth climate, the ascensional times are approximately 4 21. To these I add 60 because I am seeking the sextile; the result is 4 81. And it is found that at the 4 81st degree of Gemini 27 4 approximately, the following sextile side of Saturn according to this position of the ascendant is approximately Gemini 27 1, and according to the position of the midheaven it is approximately 9; therefore the first position differed from the second degree through the six-hour period by 3 8. Therefore for each hour each position will differ from the next degree by 3. Saturn is distant from the midheaven approximately 4 1/2 12 15 temporal hours. Therefore Saturn takes the corresponding difference for the 4 1/12 15 hours, approximately 14 degrees; add these 14 degrees to the preceding proper degree of Gemini, that is degree 9. The result is Gemini degree 23. I add for this reason because the degrees of the right sphere, 9, the sextile degrees, are less than the 27 degrees of Gemini, <which are> the ascendant degrees; for if the degrees of the right sphere had been greater than the ascendant degrees, we would have subtracted 9 degrees. Let us move the sphere toward the following signs; thus the sextile side of Saturn has been found to be Gemini 23.And since the apheta is the ascendant at Taurus 12 0, let us use the ascensions of the ascendant and we shall find the times corresponding sextilely, amounting to approximately 24 3; therefore after approximately 24 44 years we declare that Saturn by the sextile side is joined to that place.

To take the trine side from the following to the preceding; let it be from the 11th house to the 7th — In climate 3, ascendant Leo 19° <9°>, midheaven Taurus 15°, Saturn Gemini 8°. The times corresponding to both the culminating and ascending degree <are> 132° <28°> 25 approximately. The times corresponding to Saturn in the right sphere are 156° 30′; and the times corresponding to Taurus <15°> are 132° 28′. The difference is approximately 24°; the diurnal seasonal hours are 17′. I divide the 24° by 17°; I find seasonal hours 1° 21′, which is how far Saturn is distant from the midheaven; again, from Saturn's co-culminations I subtract 120° of the 30 sextile side; the result is 36°. Of these 35

[1] Numerus 12° 32′ verus est. Vidimus Rhetorium tempora horarum diurnarum in tabulis suis iam computata invenisse, nam ratio quadrat cum numeris ascensionum rectarum et obliquarum, si minutorum rationem habueris, quae Rhetorius in computationibus suis neglexit [Rome].

The 4th degree of Aquarius co-culminates nearby according to position. Thus I found this to be in sextile to Saturn at the 4th degree of Aquarius. Again, the rising time co-rising with Saturn is 52° 30′ approximately in the 3rd climate; from which I subtract 20° of the trine side. Remainder: 172° 30′. With these co-rises the 7th degree 2′ of Capricorn. According to this position, therefore, the 7th degree 2′ of Capricorn is found to be in trine to Saturn. The excess of the two distances is 27 degrees; one sixth of which, on account of the sextile, equals 4° 10′; and since Saturn was shown to be 1 hour 21 seasonal hours distant from the midheaven, multiplying these by 4° 5′ gives approximately 7°; I subtract these 7° from the 4th degree of Aquarius and the remainder becomes 27 degrees with the addition of 30′. From Saturn, the right trine side is approximately the 27th degree of Capricorn, and the 27th degree of Capricorn is the trine side of Saturn.

Lot of Fortune: Scorpio 24°, Saturn: Capricorn 7°, Ascendant: Sagittarius 1°, Midheaven: Libra 17°, 3rd climate. It is necessary to find when Saturn conjoins the Lot of Fortune. The co-culminating times of the culminating degree Libra 17° are 285; the co-culminating times of the Lot of Fortune are 321°; the excess is 36°. The diurnal hourly times of the Lot of Fortune in the 3rd climate are 13. I divide 36 by 13; the result is approximately 2 hours and a half and a third, which is how far the Lot of Fortune is distant from the midheaven. Again, the co-culminating times of Saturn are 300°. It is distant from Libra 17°, which co-culminates at 285; remainder: 82°. The diurnal seasonal times of the degree of Saturn are 12° 32′. Multiplying these by the seasonal hours of the distance, 2 and a half and a third, gives 35° 31′. Subtract these from 82°; remainder: 46° 29′. One must therefore say that after approximately 41 and a half years, Saturn will conjoin the Lot of Fortune.

1 The number 12° 32' is correct. We have observed that Rhetorius found the lengths of the daytime hours already computed in his tables, for the calculation agrees with the numbers of the right and oblique ascensions, if you take into account the minutes, which Rhetorius neglected in his computations [Rome].

Another. — How to find how many hours the apheta is distant from the midheaven when found in the 12th place, and how the midheaven is derived from it 1.

Midheaven Taurus 29°, apheta Aries 16°, lot 4°; the times co-culminating with the degree of Taurus 29° are 147'; the times co-culminating with the apheta are 105', whose difference is 42'. Diurnal hourly times of the apheta 15' 47''. I divide 42' by 15' 47'', the result is 2½⅙ seasonal hours; by that many hours is the apheta distant from the midheaven. The reverse is as follows: let it be given that the apheta is 2½⅙ seasonal hours distant from the midheaven, and everything else the same. It is required to find the midheaven. Diurnal hourly times of the apheta 15' 47''. Multiply these by 2½⅙ seasonal hours; the result is 42'. The degrees co-culminating with the apheta are 105'. Add 42' to this; the result is 147'. The degrees co-culminating with 147' are found to be Taurus 29°, which was what was required to find.

Hourly times of Venus 11° 19′: daily hourly times of Venus 18° 41′; subtract the six-hour period of Venus above the earth: times 112° 6′. Remaining hourly times: 33° 10′. Dividing these by 11° 19′, I find approximately 3 seasonal hours, by which Venus is distant from the ascendant. Then the degrees co-rising with Venus: 58° 18′; subtract the 4° 5 of the right side of the square; remainder after a full circle: 328° 18′. And co-rising with these is the 9th degree of Aquarius; therefore, according to this position of Venus, the right-hand square side is the 9th degree of Aquarius. Again, the degrees co-culminating with Venus: 170° 10′. Subtract 90°; remainder: 80°. And co-culminating with the 80 degrees is the 19th degree of Pisces. 10 Therefore, according to this position of Venus, the right-hand square side is the 19th degree of Pisces. The difference between the two positional degrees: 40°. And since Venus is 3 hours distant from the ascendant, taking half of the 40°, which is 20°, add it to the 9th degree of Aquarius, and the right-hand square side of Venus is found to be the 29th degree of Aquarius, which was what was to be found. 15

## How one must take, when the apheta is in the second house, the conjunction of the anairetes with it.

Ascendant Leo 25°, midheaven Taurus 18°, climate 5th, Lot of Fortune, the apheta, Virgo 15°, Mars Taurus 25°, opposite of Mars the anaeretes Scorpio 25°; it is necessary to find when the Lot of the 20 Fortune meets the diameter of Mars. The times co-culminating with the degree of Taurus: 35. The times co-culminating with Fortune 256, that is Virgo 15°; the excess: 121 times. The diurnal hourly times of the Lot of Fortune: 15° 52'. In the six-hour period above the earth, 500 degrees are taken up. Subtract these from the 121. 25 Remainder: 26. The nocturnal hourly times of Fortune: 14° 8'. Divide the 26 by 14° 8', the result is nocturnal kairos hours approximately 1 and a half and a third. Fortune is therefore distant from the ascendant approximately 1 and a half and a third. The original co-culminating times of the 18th degree of Taurus were 135 times. The excess of these is 188. The daytime hourly times of the 25th degree of Scorpio are 12¼. These multiplied by six on account of the six-hour period above the earth give 72 24 times. Subtract these from 188. The remainder is 115 36. The nocturnal hourly times of the 25th degree of Scorpio are 17 56. But from the beginning the apheta was shown to be distant from the ascendant by approximately 1⅓ temporal hours. Multiply these by the nocturnal hourly times 17 51, giving 32 53 times. Subtract these from 115 36. The remainder is 82 ⟨43⟩. Therefore in 82 43 years the opposition of Mars will conjoin the apheta, which was what was to be found.

Another. How one must take the right triangular side when the star is in the third house.

Ascendant at Taurus 12°, midheaven at Capricorn 23°, climate 5. Jupiter at Cancer 11°; co-culminating with the 29th degree of Capricorn, rising time 24 54. The co-culminating times of the 11th degree of Cancer are 15 182 times. Excess 167. The daytime hourly times of Jupiter are 18 39. The times from the six-hour period above the earth amount to 112. Subtract these from 167; remainder 55. The nocturnal hourly ⟨times⟩ of Jupiter at the 11th degree are 21. Divide these also over 55 12. And dividing, the temporal hours become 4⅓ approximately. Jupiter is therefore distant from the ascendant by 20 4⅓ temporal hours. The degrees rising together with Jupiter are 80. Subtract 20 degrees from them on account of the right trine; remainder 320. The degrees rising together with 320 degrees are Capricorn 29°. According to this position therefore the right triangular side from Jupiter is at Capricorn 29°. Next, the co-culminating times of Jupiter are 182. 25

Subtract the triangular side 120. Remainder 72. The co-culminating degrees with the 72 degrees are Pisces 11 degrees. According to this position, therefore, the right triangular side towards Jupiter: Pisces 21 degrees. The difference between the 2 positions is 42; one-sixth of these is 7. Multiply the 7 by the seasonal hours 4 51, which is how far Jupiter is from the ascendant. The result is 33 57 years. Add these to the 29, the result is 63. I assign therefore Capricorn 30 and Aquarius 30. And it ends at Pisces degree 3. And Pisces 3 degrees becomes the trine of Jupiter.

## How one must take the right triangular side when the star is in the 7th place.

Nadir: Cancer 21 degrees. Moon in place 3, Libra 29 degrees. Climate 5. The co-culminating degrees with Cancer degree 23: 6 years. And the co-culminating degrees with the Moon: 278 years. The difference: 244 40 nocturnal seasonal hours of the Moon: 16 43. Divide by these the 243 40; the result is seasonal hours 5 and a half approximately, which is how far the Moon is from the nadir anti-midheaven. The co-rising degrees with the diameter of the Moon, degree ⟨Aries 29, years⟩ 17. Subtract 120 years, the triangular side; remainder 257. With the degrees corresponding to these by opposition at their setting: Taurus 30 degrees. According to this position, therefore, Taurus degree 30 is the right triangular side of the Moon. Again the Moon co-culminates opposite Libra degrees 29: years 277. Subtract 120, the triangular side; remainder: years 177. With the 177 degrees co-culminate Gemini 27. According to this position, therefore, Gemini degree 21 is the trine of the Moon. Difference

of the 2 positions, degrees) 28. Of these, the sixth part, on account of the six-hour interval, gives time(s) 4 40. Multiply the 4 40 by the seasonal hours; it gives) time(s) 21. Add these to the lesser, that is, to the degree of Taurus 30, it gives) <Gemini> 21, right trine of the Moon.

Ascendant Aries 12°, midheaven Capricorn 23° 30', climate 5, Sun Taurus 12°, Moon Libra 30°, Mars Taurus 18°, Mercury Taurus 21°, Venus Libra 20°. I seek the aphesis of the Moon while it is in Libra at 30°, when it conjoins each of these in the following way: lower midheaven Cancer 23° 30', right sphere time(s) 205 21'. Moon Libra 30°, right sphere [ascension] 207 [?]. Excess 21° 34'. Nocturnal hourly times of the Moon 16° 43'. Divide 181° 34' by the 16° 43', it gives seasonal hours 5 and a half approximately. The Moon is therefore that many seasonal hours distant from the lower center. One must therefore find when the Moon conjoins the diameter of the Sun. Diameter of the Sun: Scorpio 12°; right sphere ascension 309° 28'. Lower midheaven Cancer 23° 30'. Right sphere 205° 26'. Excess 104° 2'. Hourly times of the Sun 17° 21'. Multiply the 17° 21' by the 5 28' seasonal hours; it gives time(s) 94° 37'. Subtract these from the 104° 2'; remainder) 9° 25'. I say therefore that the Moon conjoined the Sun in opposition after approximately 9 years 2 months.

Again, Mars in Scorpio 18°. By opposition in the right sphere, 28°. Excess toward the nadir 110° 2'. Diurnal hourly times of Mars 17 38'. These multiplied by the 5 and a half seasonal hours of the distance of the Moon produce times 96° 57'. Subtract these from 110° 2'. Remainder 13°. I say therefore that the Moon has joined Mars, and from these 13 years from which Mars received the times, he became the chronocrator.

Again, the diameter of Mercury in Scorpio 21°. Right sphere 318° 29'. And the co-culminating times at the nadir were 205° 21'. Excess 113° 3'. Diurnal hourly times of Mercury 17° 46'. These multiplied by the 5 and a half hours produce times 97° 43'. Subtract these from 113° 3'. Remainder 15° 20'. Say therefore that the Moon joins the diameter of Mercury after 19 years 30 and 4 months.

1 28°, that is the difference between Taurus 30° and Gemini 27°. ## 15. On the Progression <of the Moon».

Climate 4. Moon Taurus 23° 30', Saturn Capricorn 16° 40', Jupiter Cancer 2° 50', Mars Capricorn 4° 42', Venus Pisces 3° 14', Mercury Gemini 4° 18', ascendant Virgo 4', midheaven Taurus 30'.

It is necessary therefore to find the passages of the Moon relative to each star: right ascension of the Moon 141° 1'. Right ascension of the midheaven 147° 44'. Excess 6° 43'. Diurnal hourly times of the Moon 17° 24'. Divide the 6° 43' by these. The result is 4 seasonal hours 23'. The Moon is therefore 4 seasonal hours 23' distant from the midheaven. The left square of Venus: Gemini 3° 14'. Right ascension 151° 8'. Excess relative to the times of the midheaven 3° 24'. Diurnal hourly times of the square of Venus 17° 23'. Divide the 3° 24' by these times. The result is 4 seasonal hours 8'. The square of Venus is therefore 4 seasonal hours 8' distant from the midheaven. Add these to the 4° 23' of the distance of the Moon from the midheaven: the result is 4 seasonal hours 31', by which the square of Venus is distant from the Moon. The excess of the Moon toward the square of Venus was 16°, which is 10 years 2 days. Diameter of Mercury: Cancer 4° 18'. Right ascension 180° 20'. The right ascension of the midheaven was 147° 44'; excess 32° 36'. Diurnal hourly times of the diameter of Mercury 18° 7'. Divide the 32° 36' of the excess by the 18° 7' of the times.The result is 1 hour and a half ‹5″ 10›. The diameter of Mercury is therefore 1 seasonal hour and a half 5″ 10″ distant from the midheaven. And the square of Venus was also distant 25

the square of the midheaven, 4 seasonal hours 35′. Multiply these by 7′. The result is 3 years 18′. Subtract these 3 years 18′ from Mercury's 32° 36′. The remainder is 29° 18′. Since it has been shown that the Moon in progression will conjoin the square of Venus after 10 years and 2 days, Venus, having received the times from the square, will rule the times from the 11th year until 29 years and 3 months. Therefore Mercury will receive the times from the opposition after 39 years and 3 months, and will be the time-ruler.

Again, Jupiter at Cancer 2° 50′, right ascension 183° 7′. The right ascension of the midheaven is 147° 44′; the difference is 35° 23′. The diurnal hourly times of Jupiter are 38° 50′; divide by these 35° 23′. The result is approximately 1 seasonal hour 57′. Jupiter therefore stands 1 hour 57′ away from the midheaven in seasonal hours. Multiply these by the diurnal hourly times of Jupiter, 38° 50′; the result is 32 years 35′. Subtract this from 35 years 22′. The remainder is 3 years 49′. We say therefore that from 39 years and 3 months, the opposition of Mercury ruling the times will last approximately 2 years and 9 months. And then Jupiter receives the times, that is, after 42 years and 4 months.

Again, the trine of Venus in Cancer 3° 14′, right ascension 183° 33′. Right ascension of the midheaven 147° 44′. Excess 35° 49′. The diurnal hourly times of the trine of Venus in Cancer 3°. Divide into 20 these the excess of 35° 49′; there result seasonal hours 1° 58′ approximately. Therefore the trine of Venus is distant from the midheaven by seasonal hours 1° 58′; and Jupiter is distant from the same by hours

1 δ' λε'] Incorrectly above p. 232, l. 14–15, the codices give 0° 8′, but the true number was 0° 11′ (cf. what is noted there); here however if you multiply 8° 7′ by 0° 11′, you will have 3° 19′ 17″, if by 0° 8′, you will have 3° 18′, which agrees with the sum of Rhetorius γ' ιη′ [Rome] 3 τῶν τοῦ ν : τοῦ τοῦ P 6 ἐτῶν is repeated twice in P, as it seems 9 β' η′ codd.: β' ν′ corr., cf. p. 232, 3. temporal hours 1° 57'. Multiply these by the hourly times of the trine of Venus, which are 30° 50', on account of the motion toward the following signs. The result is: times 35° 18'. Subtract these from the 35° 49' of the excess. Remainder: times 0° 31'. Which is approximately 3 months, 2 days. Jupiter will therefore be lord of the times from year 41, month 10, until year 42, month 4, day 20. Again, the opposite point of Mars in Cancer 4° 42', right ascension of the sphere 185° 1'. Right ascension of the sphere of the midheaven 147° 44'. Excess 37° 21'. The daytime hourly times of the opposite point of Mars are 30° 3'. Divide the 37° 21' by these; the result is 2 seasonal hours 15', which is how far the opposite point of Mars is from the midheaven. Venus was also 1 seasonal hour ½ ¼ 12' 20' distant from the midheaven. Multiply these by the hourly times of Mars, which are 30° 6'. The result is: times 35° 32'. Subtract these from the 37° 26'. Remainder: 1° 54'. Therefore, after approximately 1 year and 8 months, Venus, having received the times from Jupiter by trine, will hold power in year 42, month 4, day 21, for approximately 1 year and 8 months, until year 44, day 21, 17'.

The opposite point of Saturn in Cancer 16° 40'. Right ascension of the sphere 147°. Right ascension of the sphere of the midheaven ** Saturn, Moon 118° 8'. Excess 50° 24'. The daytime hourly times of the opposite point of Saturn are 17° 57'. Divide the excess, 50° 24', by these; the result is 2 seasonal hours 48'. Saturn is therefore 2 seasonal hours ½ ¼ 15' distant from the midheaven. Mars was also 2 seasonal hours 4' distant from the midheaven. Multiply these by the hourly times of Saturn, which are 17° 57'. The result is: times 37° 6'. Subtract these from the excess of Saturn, which is 3° 24'. Remainder: 13° 18'. After the 44 years, therefore, Saturn, having received the times, continues for approximately 13 years, 2 months, until year 57, month 2.

Another. On the same topic, more clearly.

Climate) 6. Sun in Aries 20°, Moon in Gemini 17°, Saturn in Capricorn 11°, Jupiter in Scorpio 19°, Mercury in Aries 25°, Venus in Taurus 2°, Mars in Virgo 25°, ascendant Leo 2°, midheaven Aries 14°. The Sun is therefore the apheta and receives as chronocrators first Mercury, then Venus, then Saturn from trine, then Jupiter from opposition, then Mars from trine, then the Moon, then the destroyer of Saturn from opposition.

Midheaven Aries 14°, right ascension time) 103°. Sun Aries 20°, right ascension 107°. Excess time) 4°. Mercury Aries 25°, right ascension 113°; excess toward the midheaven time) 10°. Subtract the excess of the Sun, time) 4°; remainder) 6°. But since we must first take the one who has received the nearest preceding direction of the Sun, it is clear that the Moon held the nearest preceding direction from sextile up to 7 years 6 days. 15

Then Mercury receives the time; the diurnal hourly times of Mercury are 16° 40′. Divide these by the 10° of the excess; the result is half a seasonal hour, which is the distance Mercury stands from the midheaven.

Again, Venus in Taurus 2°, right ascension time 120°. Subtract from these the 103° of the midheaven's time; remainder of excess 17°. The diurnal hourly times of Venus are 17° 7′. Divide the excess by these; the result is approximately 1 seasonal hour, which is the distance from the midheaven. Divide the seasonal hours of Mercury's distance from the midheaven, 5° 37′, by the 17° 7′ of the hourly times; the result is 10° 16′ of time. Subtract this from the 17° of the excess of time; remainder: time) 6° months 7°. Mercury will therefore be chronocrator for 10 years 7 months — that is, from the beginning of the 7th year up to 10 years and 7 months — and then will hand over to Venus.

Again, the trine of Saturn in Taurus, 11th degree, right ascension time: 129. Subtract from these the 103 of the midheaven; the remaining surplus time is 26 and a fraction, which yields 1 hour 30 minutes of seasonal hours. Therefore the trine of Saturn stands 1½ seasonal hours away from the midheaven. Then again, multiply the distance of Venus from the midheaven — that is, 1 hour — by the hourly times of the trine of Saturn, namely 17° 39', and the result is 17° 39' of time. Subtract this from the surplus of Saturn, that is from 26; the remainder is 8° 21'. Therefore Venus, taking over the chronocratorships from the age of 11 years and 7 months, will hold them for 9 years, that is until the age of 20 years and 7 months.

Again, the diameter of Jupiter in Taurus 19°. Right ascension 136° 28'. Subtract the 103° (times) of the midheaven; remainder of the excess 33° 28'. The hourly times of the diameter of Jupiter are 8° 7′; divide the excess, i.e., the 33° 28′, by the hourly times: the result is 1 hour 11 minutes of seasonal hours. Therefore the diameter of Jupiter is distant from the midheaven by 1 hour 11 minutes of seasonal hours. Again, multiply the seasonal hours of the distance of the midheaven of Saturn, 1 hour 30 minutes, by the daytime hourly times of the diameter of Jupiter, namely the 8° 7′: the result is 27° 10′. Subtract this from the excess of Jupiter, the 33° 28′. Remainder: 6° 18′. The trine of Saturn, therefore, beginning from 20 years 7 months, will last 6 years 4 months 17 days, that is, until the 21st year, 11 months, <17> days.

Again, the trine of Mars in Taurus 25°. Right ascension 142° 34′. Subtract the times of the midheaven, 103°. Remainder of the excess: 39° 34′. The daytime hourly times of the trine of Mars are 8° 25′. Divide the excess by these; the result is 2 hours 9 minutes of seasonal hours. Therefore the trine of Mars is distant from the midheaven by 2 hours 9 minutes of seasonal hours. But the diameter of Jupiter was distant from the midheaven by 1 hour 11 minutes of seasonal hours. Multiply this by the daytime hourly times of the trine of Mars, that is, the 8° 25′. The result is [some number of] times and 48′. Subtract 1 The right ascension of Taurus 11° is 128° 29′. These from the excess, that is from 39° 34'; remaining times: 17 minutes, 11 months, 9 days. Therefore the opposition of Jupiter, beginning to prevail from the said 11 months and 17 days, will extend until the 44th year, 3 months, 21 days.

Again, the Moon at Gemini 17°. Times of the right sphere: 165° 50'. Subtract from these the times of the midheaven: 103°. Remaining excess: 62° 50'. The diurnal hourly times of the Moon: 19° 13'. Divide the excess by these; the result is 3 hours 21 minutes. Therefore the Moon is distant from the midheaven by 3 hours 21 seasonal hours. The trine of Mars was also distant from the midheaven by 2 hours 9 seasonal hours. Multiply these by the diurnal hourly times of the Moon, that is by 19° 13'. The result is 41° 19'. Subtract these from the excess of the Moon, that is from 62° 3'; remaining: 21° 31'. Therefore the trine of Mars, beginning to prevail from the 45th year, will pass through until the 47th year, 7 months, 5 days.

Again, the diameter of Saturn in Cancer is 11°, the right sphere is 172°, subtract 133°, the excess is 79° — the diurnal hourly times of the diameter of Saturn are 19° 11′. Therefore multiply the 3 hours of the Moon's distance from the midheaven by the 19° 16′ hourly times; the result is 4 years, 6 months, 17 days. The Moon, therefore, having received the times from 65 years, <5 months,> 5 days, will hold them until another 2 years, 3 months, 12 days, that is, until a total of 72 years, 10 months, 17 days; and from that point the diameter of Saturn, being destructive, brought death.

Bouché Leclercq, *Astrol. gr.*, p. 179, n. 1, qui nomen hoc ab Antigono fictum esse perperam credidit. Cum Porphyrius et Rhetorius pariter Antiochi opere usi sint, Phnaem auctorem ab Antiocho commemoratum esse opinor, sed fieri potest ut ὁ παλαιός qui a Valente *l. c.* (p. 136, 8) citatur, non Petosiris, sicut videtur Krollio, sed Phnaes sit, cuius nomen ignotum librarius praeterierit.

of the current year and those who oversee it and the transmissions and receptions of that year, and the conjunctions that occur and the degree-periods of the stars, as Valens set forth in the 2nd chapter of Book III, and the complete risings and periods and returns of the signs and of the stars, the co-returns according to the half and third and two-thirds, as Valens stated in the 4th, 5th, and 6th chapters of Book VII; for he spoke about the years of life from the periods of the stars and the ascensions of the signs with examples. Seek also the distribution of Fortune and the Daemon, for having examined all these things in order and according to reason you will not err at all in the account concerning the years of life. Pnaïs the Egyptian and Valens also say in the 5th chapter of Book III that one must seek the lord of the nativity, how it is positioned by phase or by place, and if it is angular, it allots its own maximum years; but if it is under the rays or in decline, it allots its own minimum years or months or days or hours.But if after the Lot of Fortune, seek how many hours it stands apart from the angle, and multiply its maximum or minimum years or months or days or hours by 12, subtracting the 12th part for each hour, and declare the remaining time as the lifespan; in this manner, however, if the lord happens to be from the ascendant up to the midheaven or the 9th or 8th place, make the release of the hours from the ascendant up to the lord. But if the lord happens to be

1 The numbering of the chapters of Valens is the same as that noted in the margin of Vatican codex 191. Rhetorius was therefore already reading this around the year 500 in his exemplar, and it is apparent that it was transmitted from antiquity.

2 Phnaes (thus perhaps more correctly spelled), an Egyptian, is also cited by Porphyry in Isag. p. 201 together with Antigonus; cf. Bouché-Leclercq, Astrol. gr., p. 179, n. 1, who mistakenly believed this name to have been invented by Antigonus. Since Porphyry and Rhetorius alike made use of the work of Antiochus, I believe that Phnaes was an author mentioned by Antiochus; but it is also possible that the ὁ παλαιός cited by Valens l. c. (p. 136, 8) is not Petosiris, as Kroll seems to think, but Phnaes, whose name an unknowing scribe passed over.

the lord from the setting sign to the 4th or 3rd or 2nd house, perform the release of the hours from the setting sign to the oikodespotes; all these chapters I will set out in what follows, that is, in the 28th chapter, through certain nativities of those who died prematurely. For it is necessary to show that from many methods the matter of the length of life arrives at the same conclusion, whether according to Ptolemy, or according to Valens, or according to some other. Seek also the matters concerning the number of the Lot of Valens, as in the 8th chapter of the 3rd book.

## 1. On the Oikodespotes.

That the oikodespotes must be the ruler of the bounds and the house-receiver of the Sun and the Moon, and must bear witness to them and to the Ascendant. If, therefore, the oikodespotes is rising, or culminating, or setting in its own sign and in its own degrees, being oriental and additive, it gives its own maximum years; but if it is under the rays or declining, it does not give the maximum years, but the lesser ones. If it is under the rays and subtractive, it gives not years nor even the lesser ones, but months or days or hours. When the oikodespotes is subtractive, conduct its course toward the preceding signs in retrogradation as far as the degree where it is about to become stationary and additive. And take care that it does not conjoin with any of the destroyers during the time of the retrogradation. By destroyers I mean Saturn, Mars, and the Sun. Valens also mentions this chapter.

### 28. On the Destroyer of Life.

Valens mentions not only these destroyers of life but also the ascendant from the Moon and the Moon from the ascendant. This is found in the 10th chapter of the 6th book. After the lord of the house has passed the degree 25

lord at the degree where it is about to station and become additive, then make its course proceed toward the following signs again. But if none of the malefic planets encounters it by ray, then the seasonal hour must be used; and the lights will hold dominion when they happen to be angular and are found to be favorably and appropriately regarded by their own house lords and term rulers.

## 19. On Nativities Without a Domicile Lord, According to Valens.

One must take as domicile lords the house-receivers and term-lords of the luminaries and of the ascendant; but when these happen to be under the rays, or in declining houses, or making a western appearance with a diurnal sign, the nativity will be without a domicile lord. If the luminaries are declining, the term-lord of the ascendant will be the domicile lord. But if he too has fallen away or is under the rays, again the nativity will be without a domicile lord. Often, even when the term-lord or house-receiver of the sect luminary is well placed, another star will hold domicile lordship — whichever one is found to have a greater relationship to the nativity and is well placed in phase, position, and aspect — for example: Sun in Pisces 20° 43′, in the terms of Saturn; Moon in Libra, in the terms of Saturn; Saturn in Libra 25°, in the terms of Venus; Jupiter in Taurus 28°, in the terms of Saturn; Mars in Pisces 29°, in the terms of Saturn; Venus in Taurus 15°, in the terms of Jupiter; Mercury in Pisces 20°, in the terms of Mars; ascendant in Virgo 6°, in the terms of Mercury; midheaven in Gemini 2°, in the terms of Mercury; Lot of Fortune in Pisces 2°, in the terms of... — We find that Saturn has received in terms alone the Sun, but the Moon both in terms and in triplicity and in exaltation, and the Sun, Mars, and Mercury in triplicity, and the ascendant in triplicity.Saturn and Venus will therefore be the domicile lords — that is, Saturn as the primary domicile lord and Venus as co-domicile lord — and both, each in his own proper time, brought about death at the same moment; and this is set out in the 4th chapter, on those who do not survive infancy.

• The chapter On Infants Who Do Not Thrive is found neither in Valens' Vatican codex nor in the summary of Rhetorius' work (Cat. Chapter 20. On the Predominating Ruler.

If the Sun and Moon happen to be the predominating rulers of the times of a nativity whose chart has no house ruler, look to the house rulers or also the term rulers of the luminary. For if they bear witness to the predominating ruler that is well placed in an aphetic place, they make it more effective and more powerful. But if the house ruler or term ruler of the predominating ruler ** has strength for the releasing, even if it happens to be placed in its own place, still the releasing must henceforth be made from the ascendant or by the other methods. And Dorotheus says this: that "one must look to the testimony of every apheta," and so on.

## 21. On the Divisions of Times.

The divisions of times must be made as follows: before all else, seek out the revolutions of the Sun and Moon, and the ascendant and midheaven, and the Lot of Fortune, always cast from the Sun to the Moon according to the command of Ptolemy, and not only according to the square and trine and sextile zodiacal aspect, that is, the topical one, but also according to the degree-based one, as you learned in chapter 16; then furthermore one must also make the revolutions of the stars not only according to the methods of Ptolemy, but also according to the risings of the signs, as each sign rises according to its own clime, as the Egyptians teach, and in that year to seek the degree of each releaser, that is, in the bounds of which star it happened to fall and with which of the stars it makes its applications, not only of the wandering stars but also of the fixed stars of both the first and second magnitude and those sharing the same wind; for example, let the Sun and the ascendant together be at Aries 22° in the 4th clime. And the fixed star Gorgon is at present at Taurus 7°.We say therefore that the Gorgon will apply to the Sun and ascendant after 10 years and 4 months, and this time will be effective for both the father and the native, just as it happens to come about from the application of the Sun and ascendant to Jupiter and Saturn, and for the father through the Sun, and for the native through the ascendant. For the ancients say that the foundation of the nativity

[1] Antigonum Nicaenum, qui post mortem Hadriani sed ante aetatem Porphyrii, id est saeculo secundo exeunte vel tertio ineunte, vixit (*Cat.* VI, p. 67 n. 1), Hephaestio Thebanus auctorem saepius affert (supra, p. 142, 32; *Cat.* VIII, 2 p. 82, 33; 84, 2; cf. ed. Engelbrecht, p. 33). Ex hoc loco apparet Rhetorium ineunte saeculo VI opus eius adhuc legisse (cf. *Cat.* II, p. 188, 4), quod quattuor libris vel pluribus constabat; cf. *Cat.* I, p. 10, f. 13; VI, p. 64, 23 : ἐν τῇ ἕκτῃ γενέσει τοῦ τρίτου βιβλίου. when the [Moon] does not have years [directed] toward the parents, the results will for the most part act upon the children. After this, seek the risings and the periods of both the signs and the stars according to the greatest, mean, and least years. Indeed, one must reckon not only by halves and two-thirds and one-third into years, but also into months and days and hours, as Valens set forth in the 6th chapter of Book 7. Next, seek the conjunctions of the stars from their own periods according to degree and sign. After this, seek the subdivisions of Fortune and of the Daemon, as Valens set forth in the 25th chapter of Book 4. Seek also the transmissions and receptions, as the same author teaches in Books 4 and 5; then finally seek the year-ruler and the ascendant of the year, as Dorotheus says, how it is situated in phase and position and by whom it is beheld and how it was situated at the nativity. And in this way, proceed to make the subdivision of the year, and after this seek the ingresses of the stars year by year, as Antigonus set forth in the 4th chapter of Book 4.

But if you intend to seek the specific kind, do it as follows: concerning the father, project the years from the Lot of the Father, and if concerning the mother, from the Lot of the Mother; project the years from the Sun, the Moon, the Ascendant, the Midheaven, and the Lot of Fortune toward whichever inquiry you have chosen, and if you do well, also from each individual Lot. Know also this: if the Sun is found as the apheta and the Moon is rising and they come into conjunction with one another, they produce a deadly climacteric — not only by conjunction but also by square or opposition, and likewise at their own squares and oppositions. One must therefore watch the Moon when she is the apheta in relation to the Ascendant, or to the preceding syzygy, or the two half-moons, and in relation to the Sun; for these conjunctions produce deadly climacterics.

[1] Antigonus of Nicaea, who lived after the death of Hadrian but before the age of Porphyry, that is, at the end of the second century or the beginning of the third (Cal. VI. p. 67 n. 1), is frequently cited as an author by Hephaestio of Thebes (above, p. 142, 32; Cal. VIII, 2 p. 82.33; 84, 2; cf. ed. Engelbrecht, p. 33). From this passage it is clear that Rhetorius read his work at the beginning of the sixth century (cf. Cal. II, p. 188, 4), which consisted of four or more books; cf. Cal. I, p. 10 cf. 13; VI, p. 64, 23: ἐν τῇ ἕκτῃ γενέσει τοῦ τρίτου βιβλίου. He is also praised, or rather criticized, by Lydus in the age of Emperor Justinian (De Ost.,

## 22. A teaching on how nativities should be carried out.

After establishing the positions of the stars according to degrees and the phases of the zodiac signs and the terms according to the Egyptians and Ptolemy, and their triplicities and their participations and their exaltations and depressions and decans and their faces and single-degree rulerships, one must examine the houses, the triplicities, and bright degrees and dodecatemoria and latitudes of the winds and the degrees and the obliquities and phases and stations and the degree-by-degree co-risings of the fixed stars nearest to them 15 and whether above the rays or the opposite in anoth-er their degree-based rising and their blends, then proceed to the ascendant and the midheaven and the degree-based centers of the of the 12 places, as you learned in the 20 retary, then the decans, that is the 15th chapter, then the 7 lots and the phases of the Moon, that is both the preceding conjunction or full moon and the third-day phase of the Moon and the seventh- n,

After setting out the ascendant and the remaining places of the chart, and fixing the stars in the places, that is, in the zodiac signs in which they were then making their course, and recording their positions by longitude, one must consider the exaltations, the terms — that is, which of the stars is enthroned in its own domicile and exalted and is in its own terms or those of a benefic and is additive in another house and exaltation and triplicity and is in opposition to its own house, that is to itself, and is in fall and whether it will be under the rays and subtractive retary, then the decans, that is the faces, the participations, the single-degree lots, the bright degrees, the dodecatemoria and the latitudes of the winds and the degrees, the phases and the stations and

1 This chapter, which is transmitted in the later part of both the Parisian codex and the Venetian codex, was excerpted from Rhetorius by a Byzantine compiler. Since it sometimes presents to us the words of the Egyptian writer more faithfully than the very chapter of Rhetorius's work preserved in the earlier part of those same codices, I have taken care to arrange its text alongside the other. Concerning the subject matter, cf. Cat. VIII, 4, p. 118 ff., chap. vdí.

but in the circuits of the Signs, their conjunctions with the ascendant and the midheaven and the lots, those occurring with the fixed fixed stars occurring according to their mixtures, have the greatest effects, mix- tures, when they have the same latitude.

for in the circuits of the stars, their conjunctions with the ascendant and midheaven and the lots, those with the fixed stars occurring according to their mixtures, have the greatest effects, when they have the same latitude.

The circuit of Saturn then signifies the overturning of affairs, and injuries and afflictions and mourning and grandfathers or fathers and elder brothers and benefits or harms from the dead, or purificatory dangers. The circuit of Jupiter signifies glories, friendships, acquaintances with great men and patronages and good acquisitions. The circuit of the Sun and Moon and of the ascendant and midheaven and the Lot of Fortune — what each of them signifies — has been stated by Ptolemy.

Take the Sun and the degree of the midheaven and their rulers, and the one among them that has greater relationship to the Sun or the midheaven — if it is found angular or well placed in a succedent house and unafflicted by the malefics — make it the indicator of the king. Then move it to an anaretic place from the succedent house, that is, to the body of a malefic, namely Saturn or Mars, and to their rays; and however many degrees are found between them, for so many years shall he reign. 10

## F. 63[4]. ρπγ'. On Dreams.

Having set up the chart with precise calculation, examine the 9th place and which of the stars is present in it. And if Saturn happens to be there together with the Ascending Node, the dream will be fearful — such as serpents, dragons, elephants, and the like according to the nature of Saturn. Also observe which place Saturn rules, and according to that place declare the fearful drama to be. But if it is not with the Ascending Node, then graves, corpses, and such things. And if instead of Saturn it is Jupiter in the 9th place, that the one who saw the dream has seen kings, or a ruler, or a metropolitan, or some other such person according to the nature of Jupiter. If it is Mars, to be holding colts or to see war, or plots, or slaughters, burglaries, arsons, tumults and disturbances, or swords, blades, spears, and the like. If it is Venus, that some beautiful and fair thing was seen, or women and weddings according to the nature of Venus, perfumes, fragrances, pearls. If it is Mercury, writings, books, churches, psalmodies, silver, gold, images, paintings, sellers, buyers, and the like. If it is the Sun, whatever flies or is raised up from the earth, or reigns, lights, torches, and the like.If it is the Moon, an old woman or a round-faced woman, or rivers, or wells, springs, lakes, and the like. F. 71. σιε. "Pachon" concerning travel abroad, from an untitled source. E

If someone wishes to travel abroad from his native land to another country, he must examine the ascendant and the western angle and the midheaven and the anti-midheaven, and must also seek out the stars that act beneficially and those that intend some harm, what position they hold and what configurations they form and which of these are dominant and how many testimonies there are; it is better when the Moon moves swiftly and is in conjunction, for then the journey will be more favorable. A benefic star standing in the ascendant is in all respects the best and most excellent. Likewise also when a benefic enters the western angle, the person departs toward glory or gain. But if Saturn or Mars is found with the Moon, Saturn brings severe illnesses, while Mars brings battles and grave outrages and misfortunes to the man. If both Saturn and Mars are found together with the Moon, there are grievous losses and misfortunes; if Mercury is found with a benefic, it is good, but if with a malefic, it is bad. Examine also the lord of the Moon and of the ascendant, in case their lights are concealed under the rays of the Sun, or whether they are making a station, or if any one of the lords is stationing — for the station is unfavorable.For it renders journeys and undertakings difficult to accomplish and troublesome. But when the stars that provide good gifts occupy the square of the Moon or are carried directly opposite in diameter,

If they remain until the Moon comes to them, their journey will be favorable. But if again someone encounters the opposite situation with Saturn or Mars in these places, nothing similar that is good will come to pass.

On sojourning abroad.

If you wish to learn about a lengthy sojourn abroad, examine the Sun and the point opposite the Sun, and also the square aspect and which sign it decans into, and which planet has come to these points. If Venus or Jupiter has come to these points, the return of that person will be without harm; but if the malefic planets are in these places, or if the Moon is carried in opposition to them at the time when someone sets out to travel abroad, his journey will be difficult to accomplish and hard. But when in these configurations no benefic planet approaches the Sun and Moon, while a malefic planet conjoins the Moon, he endures trouble and dangers in his flight and arrives back in his homeland. If Mars is found in the preceding sign, Saturn in the following sign, and the Moon in the middle, with Jupiter not casting its gaze upon them, it brings terrible, harsh, and greater misfortunes. But if it is observed by Jupiter, the sorrows will be lighter.

The 2nd sign from the ascendant signifies the * return and the prolonged and non-returning sojourn abroad. Examine, therefore, the lord of this sign; if it is found retrograde, his journey will be empty and in no way productive. But if it is stationary and well moving forward, the one who sojourned abroad, after a long time, will return well to his home. But if on the angle of the ascendant or of the midheaven

the same lord of the 2nd place is found, he will fall ill. But if it is found at the subterranean center, it signifies death. And if the Moon is found subterranean together with Saturn, it signifies losses and a prolonged sojourn in a foreign dwelling.

## Otherwise.

Observe the one who governs and rules, and the lord of the ascendant, and especially the Moon, whether they happen to be at the ascendant-or the midheaven and are witnessed by the benefics while the malefics are in aversion — they make journeys abroad fair and profitable. But if the Moon and the ascendant happen to be in a tropical sign, they will return quickly; if in the fixed signs, they will be delayed; and if the Moon also happens to be under a bond, they will be delayed even more. But if somehow the aforementioned planets happen to be in a malefic place and are seen by malefics, the journeys abroad will turn out adversely. And if also in a fixed sign or under a bond, they will be delayed. And if the Moon makes an application to a stationary malefic, the evil will persist, or perhaps the traveler will not return at all, nor will he perish in a foreign land. In such configurations, take careful note. For in the case of those who are abroad continuously, if the Moon is in the moist signs and is unsympathetic or afflicted by the malefic influences of the moist places, in which ... they perish. But for those traveling by land, observe the terrestrial and four-footed signs of the same place, for the human-formed signs are sympathetic in both respects. And when the Moon is in sympathy with the signs pertaining to journeys abroad and is beheld by benefics, they will return safely.In matters of journeys abroad, applications are more effective than separations.

[1] Nescio an huius temporis historiae scriptores aliquid narrent de hoc episcopo Euripi, sive Chalcidos in insula Euboea, qui accusatus et damnatus anno 1009 in Italiam relegatus est et exilium fugiens, Constantinopolim, ut videtur, reversus, inde in sedem episcopalem rediit. Certe nomen eius inter ea quae collegit Lequien *Oriens Christ.*, II, p. 215, non invenitur.

Concerning the bishop of Euripus exiled to Italy.

## Γ. 74. σιθ'. How one must examine the annual reviews in the inceptions.

The annual reviews in the inceptions must be examined in the following manner: first, the 12 places of the inception must be investigated as to what results they will produce; for each place is indicative of various results; the lot of Fortune and of Daemon and of Necessity and of Eros, and the preceding syzygy and of the Ascending Node and of the Descending Node, and in short all things must be sought in the same manner as in nativities, and the universal results must be set forth. Then the matters concerning the division of times must be observed in greater detail for each year.

And let the example be the inauguration of a certain bishop of Euripus,* in the year 6510, indiction 15, month September 21, day 1, hour 3. Aries 30°. Ascendant Scorpio 18°, Venus 18°, Fortune 28° – 2nd house Sagittarius – 3rd Capricorn, Jupiter 3° 16° – 4th Aquarius, lower midheaven 16° 25° – 5th Pisces, North Node 17° – 6th Aries – 7th Taurus, Descendant 18°. 8th Gemini, Saturn 20° 15° – 9th Cancer, Mars 21° 30° – 10th Leo, midheaven 16° 25° – 11th Virgo, Sun 28° 28°, South Node 17° 13°, syzygy 27° 12° – 12th Libra, Moon 16° 3°, Mercury 16° 21°.

The Sun, signifying glory, is dominated by the two malefics and was in the bounds of the malefics, indicating many failures and outrages concerning life and downfall, and they will, it says, never cease faring badly. The Moon also, being in the 12th house, by the two

* I do not know whether historians of this period record anything about this bishop of Euripus, or Chalcis on the island of Euboea, who was accused and condemned in the year 1009, banished to Italy, and fleeing his exile apparently returned to Constantinople, from where he went back to his episcopal see. His name is certainly not found among those collected by Lequien, Oriens Christ., II, p. 215.

of malefic planets is seen, and especially by Mars in a square aspect; which diminishes life; and some even flee to sacred places. Mercury, being the lord of the conjunction, was in square to Mars with respect to the Sun, and indicates that there will be slander and accusation. And the Moon, applying to a malefic, signified future misfortunes. Yet the outcomes were good, because the lord of the Moon was seen at the ascendant and by Jupiter. And the ascendant was well configured, but the midheaven was badly configured, as was its lord; the lord of the Lot was in decline and in its depression, and for this reason, having been exiled, he suffered terrible things. For stars in decline and in depression indicate banishment abroad, as do those in opposition to their own houses. Mars, being lord of the ascendant and in decline, indicated also diseases in a foreign land. The second house also showed, in which the Moon was harmed by Mars, contests and fears and accusations, and wandering in a foreign land, as it was also lord of the ninth house. Mars, being lord of the ascendant and being in the ninth, indicated bodily affliction in a foreign land, and on account of its depression in the declining house, also flight to a sacred place; for the ninth house also signifies a sacred place. The degree-based square of Mars is Libra 21° 2′, which also adhered to the Moon after 7 years and 11 days.and after 7 years, 8 months, 7 days, in the year 6517, in the month of April, on the 18th day, the 2nd indiction, after Easter, having been accused, he was exiled to Italy; from there, having fled, he came to the Great Church, and after completing two years, he was released to his own bishopric. The 8th year, therefore, in which the exile reached its end with respect to the lord, corresponds by fixing to Saturn; the 8th month corresponds to the opposition of Mars, that is, Capricorn; and the 18th day corresponds to Saturn by fixing. And if you also examine the ingresses, you will find them concurring.

For in nativities or also in the inceptions of those of high rank, it is necessary to examine the lord of the year in the return according to its transit, in which place of the nativity it is found and who beholds it, and 30 thus to render judgment; for example, the annual sign being Leo, its lord the Sun was found in Taurus with Venus at the culminating point fixed by the nativity, which is a place of rank. And the lord being together with a benefic star

being found, it granted an authoritative rule to that year. For the annual sign was also benefited at the fixed point by Jupiter.

One must also examine the lords of the 12 houses in transit similarly; for example, the 4th house concerning immovable property is in Taurus, its lord Mars was found in transit in Cancer, debilitated and in misfortune, and there occurred a collapse of buildings due to fire and earthquake around the month of November, when Mars came into Taurus.

It should be known that the sign of the year must be examined in both houses, in the nativity and in the anti-nativity, and the effects of both houses must be stated.

The Byzantine writer continues his discussion on the same topics up to f. 76, but offers no other example drawn from his own time; on f. 75v Vettius Valens is named: According to Valens, bodily matters are derived from the Lot of Fortune, while matters concerning action and rank are derived from the Sun.

Valens infers matters concerning the body — such as beauty, pleasure, vigor, enjoyment, attractiveness, illness, and all bodily conditions, as well as the manual arts (for there are also arts derived from reason and knowledge, which belong to the Daimon) — all of the aforementioned he infers from the Lot of Fortune; while matters concerning action and inaction, glory and inglory, honor and dishonor, and all else that brings joy or sorrow to the soul, he discerns from the Daimon. And in their subdivisions one must know in advance the constitution of the nativity, whether it is fully fortunate, middling, or moderate; observe these things according to the effects of the

1 After this chapter an excerpt from Rhetorius (published Cat. II, p. 212) is found in the manuscripts. Therefore, what the Byzantine excerpteur attributes to Valens, I would believe he had in reality taken from Rhetorius, who praised Valens here as he often did elsewhere.

On the fortune of the account of Valens, namely that the luminaries and the triplicity lords, being angular and in their own thrones and especially the luminaries attended by spear-bearers, with no malefic bearing witness, and with the Lot of Fortune and of the Daemon and of kingship and their lords having fallen well and in the angles, the nativity is wholly fortunate; in the succedent houses it is less fortunate, and in the cadent houses, impoverished. If, then, the distribution from the Daemon reaches Fortune or the midheaven of Fortune, with the lord present by transit or bearing witness to the place and being witnessed by benefics and the luminaries by transit, * but if by fixation, it is better; if the substance is brilliant, he will rule and be glorified at that time, and will be very distinguished and blessed by many on account of his good fortune. But if the division comes to the ascendant or the midheaven or the remaining two angles, he will be glorified, but less so. And if, with things being thus, the substance from which he pursues his activity is moderate, he will be benefited, or will be deemed worthy of benefactions and gifts from persons of greater standing or from friends, especially if benefics are present or bear witness.But if malefics bear witness, the matters of the places will become manifest, yet on account of the testimony of the malefics they will be overturned by adversities and losses, and he will have an unstable foundation for good fortune. But if the distribution from Fortune reaches an angle and its lord is in an angle, being acted upon by Saturn and Mars, they will be tested at that time by illnesses or certain dangers.

One must always examine the lord of the day to see against whom it makes its approach by body or aspect, and who observes it by transit, and how the sign of the day stands in relation to its own lord, for if it falls averse to it or in opposition, it signifies contrary things. And one must observe, if this is the case, into which house the sign and its lord have fallen, and thus make one's judgment. For let the sign of the day be in the 3rd house, and the lord of the day be found in opposition in the 9th house, and declare that the day will be found contrary with respect to friends and relatives, especially when the Moon is also found averse at that time.

III. 135. 344. Another chapter on messages.

Pleasant letters and messages will be delivered when the Moon, in the messenger signs, chances to be in conjunction with Mercury or is looked upon by him and by the benefics; for if the malefics have taken the aspect, the messages that come to knowledge will be disturbing. And Mercury, rising in the aforementioned signs under favorable testimony, will indicate the same things. The messenger signs are those in which, together with the two luminaries, one of the benefics also cast its rays, or those in which it stands alone without malefic testimony — a configuration which the Egyptians call scepter-bearing. And the benefics entering upon the luminaries, especially when angular or in their squares or oppositions, with Mercury being pure and free from the testimony of the malefics, are messengers of good news and causes of favorable sojourning abroad. Some add that the luminaries, passing through hearing signs, cause one to hear something about those abroad, while those in seeing signs cause one to see them; and the seeing signs are those equally distant from the solstitial points, while the hearing signs are those equally distant from the equinoctial points.

Kroll, p. 374), in the 4th century by Hephaestio of Thebes (Cal. VIII, 2 pp. 64 f.), in the 6th century by Rhetorius of Egypt (Cat. VIII, 4, p. 199, cf. p. 270). Nevertheless it is remarkable that this excerpt on the terms of the most ancient astrologer appears in the Venetian codex and in

codice Romano ut capitulum operis Achmetis Persae praeberi, ita ut illud ex Arabica vel Persica lingua in Graecam conversum esse suspicari possimus. In Parisino autem inter fragmenta Palchi invenitur et sermo eius non Byzantini interpretis esse videtur sed antiquitatem sapit: immo verba eius aetati conveniunt quo civitates Graecae florebant (p. 258, 1: διπολῖται; p. 258, 24 ἀντιπολιτεῖαι, cf. Vett. Val., p. 16, 16; 107, 25) et in templis certamina sacra celebrabantur (p. 259, 12, p. 260, 24, ἱερονῖκαι: cf. p. 259, 4; Val. p. 75, 8) et ludi gymnici fiebant (p. 259, 7, φιλοπάλαιστροι).

they become fellow citizens. From degree 7 to 12, the bounds of Venus: love, friendship, and entanglements with superior women. From degree 13 to 20, the bounds of Mercury: good nourishment, industry, good repute, advancement. From degree 21 to 25, the bounds of Mars: utter ruin, exile, condemnation, flight, adultery, injuries, and fruitless entanglements. From degree 26 to 30, the bounds of Saturn: two-faced persons, guardians, those involved in judicial proceedings, some also teachers, and some who are placed in positions of authority.

Taurus: from degree 1 to 8, the bounds of Venus: love, lovers of cleanliness, musically gifted, charming. From degree 9 to 14, the bounds of Mercury: peace, leadership, those of ruling rank or guardians. From degree 15 to 22, the bounds of Jupiter: beauty, good repute, ambition, unexpected advancement, not many friendships. From degree 23 to 27, the bounds of Saturn: dissolutions, relaxation of all things, continuous enjoyments, diminution of possessions. From degree 28 to 30, the bounds of Mars: those who die violently, brigands, plunderers, the condemned, and some who are mutilated.

Gemini: from the first degree to the sixth, the bounds of Mercury: calm, steadfastness, tranquility. From degree 7 to 12, the bounds of Jupiter: beneficence; they both bestow and receive benefits and attain advancement. From degree 13 to 17, the bounds of Venus: bloom, beauty, good fortune from unexpected sources. From degree 18 to 24, the bounds of Mercury: power, authority of command, advancement. From degree 25 to 30, the bounds of Saturn: subjugation, orphanhood, bonds, inglorious military service, degradation of rank.

Cancer from the first degree to the 7th, the terms of Mars: movements, disturbances, enmities, political oppositions, dangers, exiles; from the 8th degree to

to be transmitted in the Roman codex as a chapter of the work of Achmet the Persian, such that we may suspect it was translated from Arabic or Persian into Greek. In the Parisian manuscript, however, it is found among the fragments of Palchus, and its style does not appear to be that of a Byzantine translator but rather savors of antiquity: indeed, its language is suited to the era when Greek city-states flourished (p. 258, 1: διπολῖται; p. 265, 24 ἀντιπολιτείαι, cf. Vell. Val., p. 16, 16, 107, 25) and sacred contests were celebrated in temples (p. 259, 12, p. 260, 24, ἱερονῖκαι: cf. p. 259, 4; Val. p. 75, 8) and gymnastic games were held (p. 259, 7, φιλοπαλαιστροι).

## G. 139. 355. <Palchus on the Spring Solstice.

Observe the spring equinox, when the Sun enters the sign of Aries at the first minute, having carefully calculated the stars at that very hour, and having established the four cardinal points and their succedent houses and their cadent houses, and having also calculated the preceding conjunction or full moon and the lord of the releaser found, as stated above, and the lord of the ascendant and the lord of the Moon and the lord of the preceding conjunction or full moon and the lord of the decan and the triplicity lords of the sect (that is, for a day chart take those of the Sun, for a night chart those of the Moon) — how they stand at the hour at which the equinox occurred, whether in fiery signs or in earthy or in airy or in watery; and wherever you find them in the aforementioned places, whether in cadent houses or in succedent houses, declare such to be the character of the year. For if you find the aforementioned five lords — that is, the releaser of the ascendant and of the Moon and of the preceding conjunction or full moon and the lord of the decan and the triplicity lord of the sect — in watery signs, say that there will be rain and an abundance of waters.But if you find some of them in fiery signs and others in watery signs, consider which of them are more powerful. And whichever you find to be more powerful, take its judgment; and also consider the Moon in latitude, in which wind it has fallen and in which sign, whether in a windy or fiery or earthy or watery one, and which of the aforementioned bears witness to it — namely, among the triplicity lords of the Sun or of the ascendant or

of the Moon itself. And observe how many bear witness to the Moon, and whatever ones you find standing in a prominent place, declare those to be indicative whether of winds, or of influxes of waters, or of heat, and in short, pronounce according to the nature of each one.

If the solstice occurs during the day, examine the triplicity rulers of the Sun, and if the Sun itself aspects the ascendant or the Moon, when they are in fiery signs, declare that there will be heat. But if the ascendant or the Moon are in earthy signs, these indicate temperate air. If the same are in watery signs, they indicate an influx of waters [and heat], and if in airy signs, they signify winds.

The second triplicity ruler of the Sun, namely Jupiter, if it aspects the Sun and the Moon when they are in fiery signs, signifies that the wind is a south wind; if they are in airy signs, it signifies a north wind; if they are in humid signs, they indicate winds and rain.

Furthermore, when the third triplicity ruler, namely Saturn, aspects them, as stated above, when they are in fiery signs, it indicates temperate conditions; if they are in windy signs, it signifies a north wind; if they are in humid signs, they indicate winds and rain.

These things have been found concerning the triplicity rulers of the Sun alone. Likewise, for the nocturnal sect, examine the triplicity rulers of the Moon, just as has been stated for the Sun; seek again the ruler of the ascendant and the ruler of the releaser found, and the house ruler of the Moon and of the preceding conjunction or full moon, and the ruler of the decan, and observe how many bear witness to the

the trigonal rulers of the Sun and the Moon and of the horoscope in a good place; and however many are found standing in greater number in a good place, declare those to be superior; but if you find them equal in number and equal in power yet signifying contrary things, then examine the Lot of Fortune in which part it has fallen and by whom it is testified, and according to that one render your judgment.

These things apply to the vernal equinox; likewise, seek also for the summer solstice, that is, within the first minute of Cancer, and for the second equinox of the autumnal turning, namely that of Libra, and similarly for the winter solstice, that is, the one in Capricorn. Observe therefore only the natures of the Signs, since not all the solstices are equal; for Aries is fiery, Cancer is watery, Libra is airy, and Capricorn is earthy and maritime; and proceed as has been said before.

Some consider it as follows: when the Sun passes from sign to sign, at the first minute of each sign, they judge as has been said before concerning the solstices, that is, having fixed the twelve places and the five planets precisely, along with the preceding conjunction or full moon. And in short, they proceed as has been said before.

## Theophili Edesseni capitula duo.

De Theophilo Edesseno, Thomae filio, astrologo chalifae Al-Mahdi, a. 785 mortuo, iam in *Catalogi* nostri tomo V (P. I, p. 229 ss.) egimus. Attamen interea nova testimonia innotuerunt quibus scripta et ingenium viri pro tempore suo eruditissimi et in omni genere litterarum egregie versati melius illustrantur. Nam annis 1909-1912 Alexander Vassiliev, doctissimus professor Dorpatensis, historiam arabice edidit et francogallice vertit Agapii, episcopi Hieropolitani (Menbidj) saeculi X, qui, cum bellum narraret quod Merwan II, ultimus Chalipharum Ommeiadarum, circa a. 750 p. C. n. contra Abd-Allâh-ben-Alî sustinuit vel potius non sustinuit, haec addidit (*Patrol. Orientalis*, t. VIII, fasc. 3, p. 525) : *Et Théophile l'astrologue, chez qui nous avons puisé ces renseignements, raconte : « Moi-même j'ai été tout le temps témoin oculaire de ces combats, j'ai noté beaucoup de choses et rien de ce qui les concerne ne m'a échappé ». Théophile a composé sur ce sujet plusieurs livres d'où nous avons extrait cet abrégé...* Inde apparet Theophilum amplam historiam temporis sui scripsisse, quae apud posteros diu auctoritatem obtinuit magnam. Saeculo XII enim Michael Syrus in Chronicorum libro illa usus est, quamvis « Chalcedonii » scriptoris — Theophilus erat Maronita — studium religiosum damnaverit (*Michel le Syrien*, ed. Chabot, t. II, p. 358) et saeculo XIII Abulfaragius (Bar-Hebraeus) saepius eam laudat (cf. Vassiliev, p. 525, n. 1).

Ab eodem Bar-Hebraeo accepimus aerae mundi qua inde a. saec. VIII potissimum annalium scriptores Byzantini utuntur, i. e. aera quae a mense Ianuario a. 5509 exoritur, Theophilum auctorem esse, et revera praeclarissimi viri gratia eam ceteris temporum computationibus Graeci praetulisse videntur. Tantum apud eos astrologi Edesseni scientia valuit (cf. disputatiunculam meam in *Revue de philologie*, XXXVIII, 1915, p. 260 ss.).

Theophilus in astrologicis saepius se ab « Antiquis » pendere profitetur et veterum scriptorum Graecorum excerpta multa servavit [1], quae sane compilatorum modo decurtavit et interdum immutavit (*Cat.* V, 1, pp. 213, 232). Capitula brevia

[1] De Orphei quod fertur poemate περὶ καταρχῶν, quod in usum suum Theophilus convertit, cf. Heeg, *Die angeblichen Orphischen* Ἔργα καὶ Ἡμέραι, Monaci, 1907, p. 61.

# EXCERPTS FROM CODEX 13 (PARIS. SUPPL. Gr. 1244).

## Two chapters of Theophilus of Edessa.

Concerning Theophilus of Edessa, son of Thomas, astrologer to the caliph Al-Mahdi, who died in the year 785, we have already treated him in volume V of our Catalogue (P. I, p. 229 ff.). In the meantime, however, new testimonies have come to light which better illuminate the writings and the talent of a man who was, for his time, most learned and remarkably well versed in every branch of literature. For in the years 1909–1912, Alexander Vassiliev, the most learned professor of Dorpat, edited in Arabic and translated into French the history of Agapius, bishop of Hierapolis (Menbidj) of the tenth century, who, when narrating the war which Marwan II, the last of the Umayyad caliphs, waged — or rather failed to sustain — against Abd-Allah ibn Ali around the year 750 A.D., added the following (Patrol. Orientalis, vol. VIII, fasc. 3, p. 525): "And Theophilus the astrologer, from whom we have drawn this information, recounts: I myself was an eyewitness to these battles the entire time; I noted many things, and nothing concerning them escaped me. Theophilus composed several books on this subject, from which we have extracted this summary....." From this it is clear that Theophilus wrote an extensive history of his own time, which long enjoyed great authority among later generations.For in the twelfth century, Michael the Syrian made use of it in his Chronicle, although he condemned the religious zeal of Theophilus, who was a Maronite, as that of a Chalcedonian writer (Michel le Syrien, ed. Chabot, vol. II, p. 358), and in the thirteenth century Bar Hebraeus (Abulfaraj) frequently praises it (cf. Vassiliev, p. 525, n. 1).

From the same Bar-Hebraeus we have learned that Theophilus is the author of the world era employed chiefly by Byzantine chroniclers from the 8th century onward, i.e., the era that begins from the month of January in the year 5509, and indeed it appears that the Greeks preferred it over other systems of chronological reckoning on account of that most distinguished man's authority. Such was the weight that the learning of the Edessene astrologer carried among them (cf. my short discussion in Revue de philologie, XXXVIII, 1915, p. 260 ff.).

Theophilus in his astrological writings frequently professes his dependence on the *Ancients, and he preserved many excerpts from ancient Greek authors[1], which he certainly abridged in the manner of compilers and occasionally altered (Cat. V, 1, pp. 213, 232). Two brief chapters

1 Concerning the poem attributed to Orpheus περὶ καταχῶν, which Theophilus adapted for his own use, cf. Heeg, Die angeblichen Orphischen Ἔργα καὶ Ἡμέραι, Munich, 1907, p. 61.

duo quae hic edimus, ideo elegimus, quod a vetusto fonte abditis rivulis usque ad serioris aevi mathematicum fluxisse videntur. Cuius remotae originis indicia quaedam in exili summario supersunt. Nam, et si astrologus christianus deorum nomina supprimere solitus est (*Cat.* V, p. 213), hic tamen his frumentum Δημητριακὸν σπέρμα appellavit (p. 268, 2, et p. 270, 27), sicut in *Dodecaeteribus Chaldaïcis* pluribus Δημητριακὸς καρπὸς et Διονυσιακὸς καρπός memorantur (*Dodecaeteris* primi post C. n. saeculi : *Cat.* II, p. 145, 24; *Dodec. Iovis* Zoroastro tributa : *Geopon.* I, 12, 36, p. 27, 17 Beck; *Dodec.* a Palcho servata : *Cat.* V, 1, p. 173, 12; p. 174, 8). Item populorum nomina quae supersunt — multa alia praeteriisse videtur Theophilus — non saeculo VIII post Chr. conveniunt sed temporibus multo antiquioribus; cf. p. 268, 18 : Μεγάλων βασιλέων (reges Persarum ?) ἤτοι Βαβυλωνίων, cum teste Plinio VI, 132, Babylon iam " *ad solitudinem redierit* "; p. 270, 3 : Σκύθαι, cum tempore Romanorum Scythae iam dudum a Sarmatis oppressi essent). Sed eadem illa nomina in excerpto Petosiridis occurrunt de solis et lunae defectionibus, cuius argumentum cum capitibus his duobus arcte cohaeret et quod auguria praebet eiusdem farinae atque praedictiones Theophili (cf. Franciscum Boll in *Cat.* VII, p. 137, 7, 34; p. 135, 26 : Βαβυλών, p. 141, 1 : Σκύθαι. — Ἀφρική, quod p. 268, 13 legitur, sine dubio scripsit Theophilus pro Λιβύη, quod apud Petosiridem saepe recurrit). Item Theophilus (p. 270, 8), sicut Petosiris, Librae vetus nomen Χηλαί pro Ζυγός retinuit (cf. Gundel, *Realenc.* s. v. " Libra " col. 117). Totam decanorum doctrinam Aegyptii evolverunt, et dissertationem de praesagiis eclipsium in singulis decanis apud eos ortam esse veri est simile. Itaque haec Theophili capitula ad auctorem Aegyptium aevi quod dicitur Alexandrini referenda esse crediderim, sive ad Petosiridem sive ad Hermetem Trismegistum sive ad alium quendam.

which we here edit, we have chosen because they appear to have flowed from an ancient source through hidden channels down to a mathematician of a later age. Certain traces of this remote origin survive in the meagre summary. For, even though the Christian astrologer was accustomed to suppress the names of the gods (Cat. V, p. 213), he nevertheless twice called grain Δημητριακὸν σπέρμα (p. 268, 2, and p. 270, 27), just as in the Chaldaean Dodecaeterids Δημητριακὸς καρπός and Διονυσιακὸς καρπός are mentioned in several places (Dodecaeteris of the first century after Christ: Cat. II, p. 145, 24; Dodec. attributed to Zoroaster: Geopon. I, 12, 36, p. 27, 17 Beck; Dodec. preserved by Palchus: Cat. V, 1, p. 173, 12; p. 174, 8). Likewise the names of peoples that survive — for Theophilus appears to have passed over many others — do not suit the 8th century after Christ but rather much earlier times; cf. p. 268, 18: Μεγάλων βασιλέων (kings of the Persians?) ἤτοι Βαβυλωνίων, whereas according to the testimony of Pliny VI, 132, Babylon had already *been reduced to a wilderness; and p. 270, 3: Σκύθαι, whereas in the time of the Romans the Scythians had long since been subjugated by the Sarmatians). But those very same names occur in the excerpt from Petosiris concerning solar and lunar eclipses, whose subject matter coheres closely with these two chapters and which offers omens of the same kind as the predictions of Theophilus (cf. Franciscus Boll in Cat. VII, p. 137, 7, 34, p. 135, 26: Βαβυλών, p. 141, 1: Σκύθαι. — Ἀφρική, which is read at p. 268, 13, Theophilus doubtless wrote in place of Λιβύη, which recurs frequently in Petosiris). Likewise Theophilus (p. 270, 8), like Petosiris, retained the old name of Libra, Χηλαί, instead of Ζυγός (cf. Gundel, Realenc. s. v. *Libra, col. 117). The entire doctrine of the decans was developed by the Egyptians, and it is probable that a treatise on the omens of eclipses in the individual decans originated among them. Accordingly, I would be inclined to refer these chapters of Theophilus to an Egyptian author of the so-called Alexandrian age, whether to Petosiris, or to Hermes Trismegistus, or to some other.

## G. 32. Effects of Solar Eclipses.

The Sun eclipsing in the first decanate of Aries signifies movements of armies, continuous military campaigns and mob unrest with much tumult and strife, and dryness of the air. In the second decanate, confinement of kings and great distress or even mortal danger, and destruction of crops; in the third decanate it brings sorrow to mankind, and also signifies the death of a great woman and the destruction of livestock.

De hac tabula, cf. quae *Revue archéologique*, 1916, I, p. 7 ss. disseruimus. Huius modi figurae saepius in codicibus Latinis inveniuntur; rarius in Graecis. Ex his nobis quidem noti sunt : Parisinus 2180, f. 108 (cf. *Cat.*, VIII, 3, p. 16, cod. 38), Ambrosianus 1030, f. 254ᵛ (cf. *Cat.*, III, p. 15, cod. 23); Ambrosianus 282, f. 155 (cf. *Cat. Mss. alchimiques grecs*, II, p. 91, cod. 8), cuius picturam phototypice expressit Carbonelli, *Sulle fonti storiche della chimica e dell' alchimia*, Romae, 1925, p. 35.

The Sun traverses all the Signs, that is, the circle of the heaven, in three hundred and sixty-three (sic) days, spending one month in each individual sign; and the Moon traverses the entire circle in 28 and one-third days, spending 2 (and a half) days in each individual sign.

1. The Sun passes through Aries from the 11th (and a half) of March to the 11th (and a half) of April – Aries. Aries occupies the head (bis repetitum).

2nd. From the 11th (and a half) of April until the 11th (and a half) of May the Sun passes through Taurus. Taurus: it rules the neck.

3rd. From the 11th (and a half) of May until the 11th (and a half) of June the Sun passes through Gemini (sic). — Gemini (sic): it rules the shoulders.

4th. From the 11th (and a half) of June until the 11th (and a half) of July the Sun passes through Cancer. Cancer: it rules the chest.

5th. From the 11th (and a half) of July until the 11th (and a half) of August the Sun passes through Leo. Leo: it rules the heart.

6th. From the 11th (and a half) of August until the 11th (and a half) of September — Virgo: it rules the stomach and the belly.

7th. From the 11th (and a half) of September (sic) until the 11th (and a half) of October (sic) the Sun passes through Libra. — Libra: this one governs the two buttocks.

8th. From the 11th (and a half) of October until the 11th (and a half) of November — Scorpio: it rules the genitals.

9th. From the 11th (and a half) of November until the 11th (and a half) of December. The Sun is in Sagittarius. — Sagittarius: it rules the two thighs.

10th. From the 11th (and a half) of December until the 11th (and a half) of January the Sun is in Capricorn (sic). — Capricorn (sic): it rules the knees.

11th. From the 11th (and a half) of January until the 11th (and a half) of February the Sun is in Aquarius (sic). — Aquarius: it rules the «shins». 11th. From the 11th (and a half) of (erasure) February until the 11th (and a half) of March the Sun is in Pisces. Pisces: they rule the feet (below).

You should know that when the Moon is born, it is found together with the Sun in whatever Sign the Sun is in, and it spends two and a half days in each individual sign and passes through all the signs in 28 (and a half) days [above he said a third]. When, therefore, the Moon is in any given sign, take care not to perform a cutting or cauterization on that member which that sign rules.

Concerning this table, cf. what we discussed in Revue archéologique, 1916, I, p. 7 ff. Figures of this kind are found quite often in Latin codices; more rarely in Greek ones. Of these, those known to us are: Parisinus 2180, f. 108 (cf. Cat., VIII, 3, p. 16, cod. 38), Ambrosianus 1030, f. 254 (cf. Cat., III, p. 15, cod. 23); Ambrosianus 282, f. 155 (cf. Cat. Miss. alchimiques grecs, II, p. 91, cod. 8), the illustration of which was reproduced in phototype by Carbonelli, Sulle fonti storiche della chimica e dell' alchimia, Romae, 1925, p. 35.
